CONTENTS

1 Introduction 1

2 Prerequisites on semigroup theory 7
  2.1 Semigroups ........................................... 7
  2.2 Uniform semigroups .................................. 13
  2.3 Full linear semigroup ................................. 17
  2.4 Structure of linear semigroups ....................... 19
  2.5 Closure .............................................. 27
  2.6 Semigroups over a field .............................. 32

3 Prerequisites on ring theory 37
  3.1 Noetherian rings and rings satisfying a polynomial identity . 37
  3.2 Prime ideals ......................................... 42
  3.3 Group algebras of polycyclic-by-finite groups .......... 45
  3.4 Graded rings ......................................... 47
  3.5 Gelfand-Kirillov dimension ............................ 51
  3.6 Maximal orders ....................................... 54
  3.7 Principal ideal rings ................................ 59

4 Algebras of submonoids of polycyclic-by-finite groups 63
  4.1 Ascending chain condition ............................. 64
  4.2 The unit group ....................................... 70
  4.3 Almost nilpotent case ................................ 75
  4.4 Structure theorem .................................... 80
  4.5 Prime ideals of $K[S]$ ................................. 96
  4.6 Comments and problems ................................ 115

5 General Noetherian semigroup algebras 117
  5.1 Finite generation of the monoid ....................... 118
  5.2 Necessary conditions ................................ 127
5.3 Monomial semigroups and sufficient conditions 134
5.4 Gelfand-Kirillov dimension 141
5.5 Comments and problems 146

6 Principal ideal rings 149
   6.1 Group algebras 150
   6.2 Matrix embedding 154
   6.3 Finite dimensional case 159
   6.4 The general case 167
   6.5 Comments and problems 174

7 Maximal orders and Noetherian semigroup algebras 177
   7.1 Maximal orders and monoids 178
   7.2 Algebras of submonoids of abelian-by-finite groups 184
   7.3 Comments and problems 194

8 Monoids of $I$-type 197
   8.1 A characterization 198
   8.2 Structure of monoids of $I$-type 209
   8.3 Binomial monoids are of $I$-type 226
   8.4 Decomposable monoids of $I$-type 239
   8.5 Algebras of monoids of $I$-type 246
   8.6 Comments and problems 253

9 Monoids of skew type 257
   9.1 Definition 257
   9.2 Monoids of skew type and the cyclic condition 261
   9.3 Non-degenerate monoids of skew type 264
   9.4 Algebras of non-degenerate monoids of skew type 275
   9.5 The cancellative congruence and the prime radical 284
   9.6 Comments and problems 287

10 Examples 291
    10.1 Monoids of skew type and the Gelfand-Kirillov dimension 292
    10.2 Four generated monoids of skew type 295
    10.3 Examples of Gelfand-Kirillov dimension 2 301
    10.4 Non-degenerate monoids of skew type of Gelfand-Kirillov dimension one 316
    10.5 Examples of maximal orders 330
    10.6 Comments 341
