Contents

Preface

Keynote address

1 Stormwater pollutant loads modelling: epistemological aspects and case studies on the influence of field data sets on calibration and verification
Jean-Luc Bertrand-Krajewski

Modelling urban flooding and risk management

19 An integrated modeling approach to predict flooding on urban basin
Ashis Kumar Dey and Seiji Kamioka

31 Detection of gas pockets in pressurised wastewater mains using dynamic system response analysis
C. Lubbers and F. Clemens

39 Implementing a space-time rainfall model for the Sydney region
M. Leonard, A. Metcalfe, M. Lambert and G. Kuczera

Modelling pollutant generation, transport and sewer processes

49 Prediction of stormwater particle loads from impervious urban surfaces based on a rainfall detachment index
I.M. Brodie

57 The prediction of solute transport in surcharged manholes using CFD
S.D. Lau, V.R. Stovin and I. Guymer

65 Application of transient storage modelling to solute transport across a surcharged manhole
I. Guymer and R. Dutton

75 Identification of sewer pipes to be cleaned for reduction of CSO pollutant load
Akihiro Nagaiwa, Katsushi Settsu, Fumiyuki Nakajima and Hiroaki Furumai

85 A performance investigation of small-bore sewers
F. A. Memon, A. Fidar, K. Littlewood, D. Butler, C. Makropoulos and S. Liu

93 Changes in isotope ratios during domestic wastewater production
R.P.S. Schilperoort, H.A.J. Meijer, C.M.L. Flamink and F.H.L.R. Clemens

Data requirements, optimisation and uncertainty of models

103 The effect of rainfall measurement uncertainties on rainfall–runoff processes modelling
D. Stransky, V. Bares and P. Fatka

113 Sewer solids separation by sedimentation – the problem of modeling, validation and transferability
R. Kutzner, H. Brombach and W.F. Geiger

125 The effect of selection of time steps and average assumptions on the continuous simulation of rainwater harvesting strategies
P.J. Coombes and M.E. Barry

Modelling for integrated urban water management

135 Achieving multiple benefits from stormwater harvesting

145 Multicriteria procedure for the design and the management of Infiltration systems
P. Moura, S. Barraud and M. Baptista
On the use of an ontology for the identification of degrees of freedom in urban wastewater systems
T. Koegst, J. Tränckner, F. Blumensaat, J. Eichhorn and V. Mayer-Eichberger

Development and verification of a general approach to describe the efficiency of vortex separators in combined sewer systems
T. Mietzel, K. Klepiszewski and G. Weiss

Water sensitive urban design technologies

Nitrogen removal capacity of wetlands: sediment versus epiphytic biofilms
S. Bourgues and B.T.H. Hart

Removal of dissolved nitrogen, phosphorus and carbon from stormwater by biofiltration mesocosms
C. Henderson, M. Greenway and I. Phillips

Local infiltration devices at parking sites – Experimental assessment of temporal changes in hydraulic and contaminant removal capacity
S. Achleitner, C. Engelhard, U. Stegner and W. Rauch

Stormwater reuse: designing biofiltration systems for reliable treatment
B.E. Hatt, A. Deletic and T.D. Fletcher

Development of a confined water sensitive urban design (WSUD) system using engineered soils
A. Dunphy, S. Beecham, S. Vigneswaran, H.H. Ngo, R. McLaughlan and A. Collins

Influence of compost characteristics on heavy metal sorption from synthetic stormwater
N. Seelsaen, R. McLaughlan, S. Moore and R.M. Stuetz

A process-based method of estimating exponential decay parameters for particulate removal in a gravel trench
D.B. Newton, G.A. Jenkins and B. Yu

Long-term hydraulic and pollution retention performance of infiltration systems
S. Le Coustumer and S. Barraud

Environmental and human health risks

Identifying the major influences on the microbial composition of roof harvested rainwater and the implications for water quality
C.A. Evans, P.J. Coombes, R.H. Dunstan and T. Harrison

Combined sewer system versus separate system – a comparison of ecological and economical performance indicators
S. De Toffol, C. Engelhard and W. Rauch

Is stormwater harvesting beneficial to urban waterway environmental flows?

Socio-economic and institutional issues

Sewer system design moving into the 21st century – a UK perspective

Understanding community receptivity to water re-use: Ku-ring-gai Council case study
R.R. Brown and P. Davies
