Goro Shimura

Elementary Dirichlet Series and Modular Forms
**TABLE OF CONTENTS**

Preface

Introduction

Chapter I. Preliminaries on Modular Forms and Dirichlet Series
  1. Basic symbols and the definition of modular forms 5
  2. Elementary Fourier analysis 13
  3. The functional equation of a Dirichlet series 19

Chapter II. Critical Values of Dirichlet $L$-functions
  4. The values of elementary Dirichlet series at integers 25
  5. The class number of a cyclotomic field 39
  6. Some more formulas for $L(k, \chi)$ 45

Chapter III. The Case of Imaginary Quadratic Fields and Nearly Holomorphic Modular Forms
  7. Dirichlet series associated with an imaginary quadratic field 53
  8. Nearly holomorphic modular forms 55

Chapter IV. Eisenstein Series
  9. Fourier expansion of Eisenstein series 59
  10. Polynomial relations between Eisenstein series 66
  11. Recurrence formulas for the critical values of certain Dirichlet series 75

Chapter V. Critical Values of Dirichlet Series Associated with Imaginary Quadratic Fields
  12. The singular values of nearly holomorphic forms 79
  13. The critical values of $L$-functions of an imaginary quadratic field 84
  14. The zeta function of a member of a one-parameter family of elliptic curves 96

Chapter VI. Supplementary Results
  15. Isomorphism classes of abelian varieties with complex multiplication 113
TABLE OF CONTENTS

15A. The general case 113
15B. The case of elliptic curves 117
16. Holomorphic differential operators on the upper half plane 120

Appendix 127
A1. Integration and differentiation under the integral sign 127
A2. Fourier series with parameters 130
A3. The confluent hypergeometric function 131
A4. The Weierstrass \( \wp \)-function 136
A5. The action of \( G_{A^+} \) on modular forms 139

References 145
