Partial Differential Equations in General Relativity

Alan D. Rendall
Max Planck Institute for Gravitational Physics,
Albert Einstein Institute, Am Mühlenberg 1,
14476 Potsdam, Germany
Contents

1 Introduction 1
  1.1 Physical background 1
  1.2 Mathematical background 4
  1.3 Structure of the book 6

2 General relativity 8
   2.1 Basic concepts 8
     2.1.1 Lorentzian algebra 8
     2.1.2 Lorentzian geometry 11
     2.1.3 Geodesic deviation and singularity theorems 16
     2.1.4 Volume and integration 20
   2.2 The Einstein equations 21
   2.3 The 3 + 1 decomposition 22
   2.4 Conformal rescalings 28
   2.5 Covering spaces and foliations 29
   2.6 Further reading 29

3 Matter models 30
   3.1 Scalar fields 33
   3.2 The Maxwell and Yang–Mills equations 39
   3.3 Continuum mechanics 41
   3.4 Kinetic theory 43
   3.5 Other matter models 46
   3.6 Further reading 49

4 Symmetry classes 50
   4.1 Static and stationary models 52
   4.2 Spatially homogeneous models 56
## 5 Ordinary differential equations

| 5.1 | Existence and uniqueness | 73 |
| 5.2 | Dynamical systems | 75 |
| 5.3 | Formal power series solutions and asymptotic expansions | 76 |
| 5.4 | Linearization and the Hartman–Grobman theorem | 79 |
| 5.5 | Examples (Bianchi models) | 80 |
| 5.5.1 | The Wainwright–Hsu system | 80 |
| 5.5.2 | Models of Bianchi types II and VI\(_0\) | 83 |
| 5.6 | Centre manifolds and the reduction theorem | 85 |
| 5.7 | Further examples | 86 |
| 5.7.1 | Bianchi types II and VI\(_0\) revisited | 86 |
| 5.7.2 | The massive scalar field | 88 |
| 5.7.3 | Bianchi type III Einstein–Vlasov | 90 |
| 5.8 | Bifurcation theory | 93 |
| 5.9 | Global existence for homogeneous spacetimes | 94 |
| 5.10 | An application to surface symmetry | 98 |
| 5.11 | Further reading | 102 |

## 6 Functional analysis

| 6.1 | Abstract function spaces | 103 |
| 6.2 | Distributions | 106 |
| 6.3 | Concrete function spaces | 108 |
| 6.4 | Littlewood–Paley theory | 115 |
| 6.5 | Pseudodifferential operators | 116 |
| 6.6 | Further reading | 118 |

## 7 Elliptic equations

| 7.1 | The concept of ellipticity | 119 |
| 7.2 | Boundary value problems | 122 |
| 7.3 | Douglis–Nirenberg ellipticity | 123 |
| 7.4 | Fredholm operators | 123 |
| 7.5 | The Einstein constraints | 127 |
| 7.6 | Further reading | 131 |
# Hyperbolic equations

8.1 The Cauchy problem
8.2 Examples of ill-posed problems
8.3 Symmetric hyperbolic systems
8.4 Strong hyperbolicity
8.5 Leray hyperbolicity
8.6 The analytic Cauchy problem
8.7 Initial boundary value problems
8.8 The null condition
8.9 Global difficulties
8.10 Comparison with parabolic equations
8.11 Fuchsian methods
8.12 Further reading

# The Cauchy problem for the Einstein equations

9.1 Coordinate conditions
9.2 The local Cauchy problem
9.3 Inclusion of matter
9.4 Cosmic censorship
9.5 The BKL picture
9.6 Further reading

# Global results

10.1 Gowdy spacetimes
10.2 Stability of de Sitter space
10.3 Stability of Minkowski space
10.4 Stability of the Milne model
10.5 Stability of the flat Bianchi type III model
10.6 The Newtonian limit
10.7 Further reading

# The Einstein–Vlasov system

11.1 Other kinetic equations
11.2 Small data global existence
11.2.1 Schwarzschild coordinates
11.2.2 Maximal-isotropic and double null coordinates
