ADVANCES IN INEQUALITIES FOR SPECIAL FUNCTIONS

PIETRO CERONE AND SEVER S. DRAGOMIR
Editors

Nova Science Publishers, Inc.
New York
Contents

Preface .............................................................. vii

P. Cerone
Special Functions Approximations and Bounds via Integral Representation .......... 1

P. Cerone and S. S. Dragomir
Inequalities for Positive Dirichlet Series ........................................ 37

Stamatis Koumandos
Monotonicity of the Mean Value Function of Normalized Bessel Functions of First Kind ...................... 67

Andrea Laforgia and Pierpaolo Natalini
Sturm Theory for Some Classes of Sturm-Liouville Equations and Inequalities and Monotonicity Properties for the Zeros of Bessel Functions ........................... 73

Milan Merkle
Inequalities for the Gamma Function via Convexity ................................ 81

István Mező
Some Inequalities for Hyperharmonic Series ....................................... 101

Edward Neuman
The Hermite-Hadamard Inequalities for Double Dirichlet Averages and Their Applications to Special Functions ........................................... 107

B. G. Pachpatte
On New Inequalities Involving Convex Functions ................................... 119

Tibor K. Pogány
On Growth Rates of Weierstraß ϕ′(z) and ϕ(z) ....................................... 125

József Sándor
On Certain Special Functions of Number Theory and Mathematical Analysis .......... 133

Mehmet Zeki Sarikaya and Hüseyin Yıldırım
On the Operator $\mathbb{O}_B^k$ Related to the Bessel-wave Equation and Laplacian-Bessel ................................................... 149

Živorad Tomovski
Inequalities for Walsh Polynomials with Semi-monotone Coefficients of Higher Order .......................................................... 161

Index ................................................................. 169
