Ocean Modeling in an Eddying Regime

Matthew W. Hecht
Hiroyasu Hasumi
Editors
CONTENTS

Preface
Matthew W. Hecht and Hiroyasu Hasumi ......................................................... 1

Introduction: Ocean Modeling—Eddy or Not
Frank O. Bryan .......................................................... 1

Section 1: Oceanographic Processes and Regimes
Fundamental Question
The Nature and Consequences of Oceanic Eddies
James C. McWilliams .......................................................... 5

Submesoscale Processes and Dynamics
Leif N. Thomas, Amit Tandon, and Amala Mahadevan ........................................ 17

Gulf Stream Separation in Numerical Ocean Models
Eric P. Chassignet and David P. Marshall ................................................... 39

Eddy-Resolving Modeling of Overflows
S. Legg, L. Jackson, and R. W. Hallberg ..................................................... 63

High-Frequency Winds and Eddy-Resolving Models
Patrice Klein .......................................................... 83

Resolution Dependence of Eddy Fluxes
Yukio Tanaka and Hiroyasu Hasumi ......................................................... 101

Eddies and Upper-Ocean Nutrient Supply
A. Oschlies .......................................................... 115

Eddies in Eastern Boundary Subtropical Upwelling Systems
X. Capet, F. Colas, J. C. McWilliams, P. Penven, and P. Marchesiello .................... 131

Section 2: Ocean Dynamics and State
From Region to Global Scale
The Fidelity of Ocean Models With Explicit Eddies
Julie McClean, Steven Jayne, Mathew Maltrud, and Detelina Ivanova ....................... 149

Common Success and Failure in Simulating the Pacific Surface Currents Shared by
Four High-Resolution Ocean Models
Tatsuo Suzuki, Hideharu Sasaki, Norikazu Nakashiki, and Hideyuki Nakano .................. 165

Eddies in Numerical Models of the Southern Ocean
V. O. Ivchenko, S. Danilov and D. Olbers ................................................... 177

High-Resolution Indian Ocean Simulations — Recent Advances and Issues From OFES
Yukio Masumoto, Yushi Morioka, and Hideharu Sasaki ........................................ 199
Towards a Physical Understanding of the North Atlantic: A Review of Model Studies in an Eddying Regime
Matthew W. Hecht and Richard D. Smith ................................................................. 213

Towards Eddy-Resolving Models of the Arctic Ocean
Wieslaw Maslowski, Jaclyn L. Clement Kinney, Douglas C. Marble, and Jaromir Jakacki .................................................. 241

Pacific Upper Ocean Response to Global Warming—Climate Modeling in an Eddying Ocean Regime
Takashi T. Sakamoto and Hiroyasu Hasumi ................................................................. 265

Section 3: Modeling at the Mesoscale
State of the Art and Future Directions

Formulating the Equations of Ocean Models
Stephen M. Griffies and Alistair J. Adcroft ................................................................. 281

Can Large Eddy Simulation Techniques Improve Mesoscale Rich Ocean Models?
B. Fox-Kemper and D. Menemenlis .............................................................................. 319

Lateral Mixing in the Eddying Regime and a New Broad-Ranging Formulation
Matthew W. Hecht, Mark R. Petersen, Beth A. Wingate, Elizabeth Hunke, and Mathew Maltrud .................................................. 339

Eddy-Resolving Global Ocean Prediction
Harley E. Hurlburt, Eric P. Chassignet, James A. Cummings, A. Birol Kara, E. Joseph Metzger, Jay F. Shriver, Ole Martin Smedstad, Alan J. Wallcraft, and Charlie N. Barron .................................................. 353

Unstructured Adaptive Meshes for Ocean Modeling
Matthew D. Piggott, Christopher C. Pain, Gerard J. Gorman, David P. Marshall, and Peter D. Killworth .................................................. 383
