Atmospheric Chemistry

Ann M. Holloway and Richard P. Wayne
Department of Chemistry, University of Oxford, Oxford, UK

RSC Publishing
## Contents

### Chapter 1 Earth’s Atmosphere

1.1 Chemistry in the Atmosphere  
1.2 Earth’s Atmosphere in Perspective  
1.3 Aerosols, Particles and Droplets  
1.4 Major Gases  
1.5 Minor Gases  

### Chapter 2 Physics of the Atmosphere

2.1 Pressures  
2.2 Mixing Ratios, Mixing, and Mean Free Paths  
2.3 Temperatures  
   2.3.1 Radiative Heating  
   2.3.2 Radiation Trapping and the ‘Greenhouse Effect’  
   2.3.3 Troposphere, Stratosphere, and Mesosphere  
   2.3.4 Beyond the Mesosphere  
2.4 Transport in the Atmosphere  
   2.4.1 Vertical Transport  
   2.4.2 Winds  

### Chapter 3 Sources and Sinks of Atmospheric Species

3.1 The Life Cycle of Atmospheric Gases  
3.2 Sources of Atmospheric Constituents  
   3.2.1 The Early Atmosphere  
   3.2.2 Sources Supplying the Contemporary Atmosphere  
   3.2.3 Chemistry  
3.3 Sinks  
   3.3.1 Chemistry  
   3.3.2 Dry Deposition  
   3.3.3 Wet Deposition  
   3.3.4 Escape
### Chapter 4 Observations and Models

4.1 Measurements of Atmospheric Composition
4.2 *In-situ* Methods
4.3 Remote Sensing
4.4 Models of Atmospheric Chemistry: Diagnosis and Prognosis
4.5 'Families' of Reactants and Intermediates
4.6 Comparison of Model Predictions with Atmospheric Observations

### Chapter 5 Ozone

5.1 Ozone: Chemistry and Photochemistry
5.2 Sources of Ozone in Stratosphere and Troposphere
5.2.1 Photolysis Mechanisms
5.2.2 Chapman Functions and the Ozone Layer
5.2.3 Comparison of Measurements with Predictions
5.3 Transport from Stratosphere to Troposphere
5.4 Initiation of Atmospheric Oxidation by OH, NO3 and O3
5.5 Absorption of UV and its Relevance

### Chapter 6 Cyclic Processes

6.1 Chemical and Physical Cycles
6.1.1 Cycles within Cycles
6.2 Carbon Cycle
6.3 Oxygen Cycle
6.4 Nitrogen Cycle
6.5 Sulfur Cycle

### Chapter 7 Life and the Atmosphere

7.1 Atmospheres on Planets without Life
7.1.1 Water and Venus
7.1.2 Nitrogen and Mars
7.1.3 Carbonates and Nitrates
7.2 An Atmosphere on a Planet with Life: Earth
7.2.1 Water and Carbon Dioxide
7.2.2 Oxygen and Ozone
7.2.3 Hydrocarbons and Other Organic Compounds
7.2.4 Dimethyl Sulfide
## Chapter 8 Chemistry in the Troposphere

8.1 Introduction  
8.1.1 Boundary Layers  
8.2 Oxidation and Transformation of Volatile Organic Compounds (VOCs)  
8.2.1 Photochemical Chain Initiation by Hydroxyl Radicals  
8.2.2 Oxidation Steps for CO and CH$_4$  
8.2.3 Tropospheric Ozone Production  
8.2.4 The Importance of NO$_x$  
8.2.5 Alkanes and Alkenes  
8.2.6 PAN  
8.2.7 Oxidation of More Complex VOCs  
8.3 Initiation of Oxidation by NO$_3$ and by O$_3$  
8.3.1 The Nitrate Radical  
8.3.2 Ozone  
8.4 Sulfur Chemistry  
8.4.1 Oxidation from State -2 to +4: the Steps to SO$_2$  
8.4.2 Oxidation from State +4 to +6: the Steps from SO$_2$ to H$_2$SO$_4$  
8.5 ‘Reactive’ Inorganic Halogens and Their Oxides  
8.6 Heterogeneous Chemistry

## Chapter 9 The Stratosphere

9.1 Purpose of the Chapter  
9.2 Interconversion of O and O$_3$: Validity of the Odd-Oxygen Concept  
9.3 Catalytic Cycles in the Gas Phase  
9.3.1 Natural Sources and Sinks of Catalytic Species  
9.3.2 Null Cycles, Holding Cycles, and Reservoirs  
9.3.3 Summary of Homogeneous Chemistry  
9.3.4 Heterogeneous Chemistry in the Stratosphere  
9.4 Polar Ozone Chemistry  
9.4.1 Abnormal Polar Ozone Depletion  
9.4.2 Special Features of Polar Meteorology  
9.4.3 Anomalous Chemical Composition  
9.4.4 Polar Stratospheric Clouds  
9.4.5 Perturbed Chemistry  
9.5 Perturbations of the Stratosphere by Nature  
9.5.1 Overview  
9.5.2 The Quasi-biennial and El Niño Oscillations  
9.5.3 Solar Ultraviolet Irradiance  
9.5.4 Solar Proton Events  
9.5.5 Volcanoes  
9.6 Variations and Trends in Stratospheric Ozone
Chapter 10  Airglow, Aurora and Ions

10.1 Beyond the Stratosphere 177
10.2 Airglow 178
   10.2.1 Optical Emission from Planetary Atmospheres 178
   10.2.2 Excitation Mechanisms 179
   10.2.3 Airglow Intensities and Altitude Profiles 180
   10.2.4 Atomic and Molecular Oxygen 181
   10.2.5 Atomic Sodium 185
   10.2.6 Hydroxyl Radicals 189
10.3 Ions in the Atmosphere 191
   10.3.1 Aurora 191
   10.3.2 Geomagnetic Fluctuations 192
   10.3.3 Radio Propagation 193
10.4 Ion Chemistry 195
   10.4.1 Ionization Mechanisms 198
   10.4.2 The F-Region 199
   10.4.3 E-Region Processes 200
   10.4.4 D-Region Positive-Ion Chemistry 201
   10.4.5 D-Region Negative-Ion Chemistry 204

Chapter 11  Man's Adverse Influences on the Atmosphere

11.1 Local and Regional Air Pollution 206
   11.1.1 Clean and Polluted Air 206
   11.1.2 Effects of Pollution 208
   11.1.3 Primary and Secondary Pollutants 209
   11.1.4 Smoke and Sulfur Pollution 210
   11.1.5 Acid Rain 212
   11.1.6 Photochemical Ozone and Smog 213
   11.1.7 Polycyclic Aromatic Hydrocarbons (PAHs) 219
   11.1.8 Biomass Burning 220
11.2 Man's Impact on the Global Stratosphere 221
   11.2.1 Consequences of Ozone Perturbation 222
   11.2.2 Aircraft 224
   11.2.3 Halocarbons: Basic Chemistry 227
   11.2.4 Halocarbons: Loading and Ozone-Depletion Potentials 230
   11.2.5 Halocarbons: Control, Legislation, and Alternatives 233
   11.2.6 Halocarbons: Future Ozone Depletions 234
11.3 Polar Ozone 'Holes' 235
   11.3.1 Discovery of Abnormal Depletion 236
   11.3.2 Origin of Chlorine Compounds; Dynamics 238
   11.3.3 The Arctic Stratosphere 239
   11.3.4 Implications of the Polar Phenomena 241
11.4 The 'Greenhouse Effect', Global Warming and Climate Change 242
   11.4.1 Radiatively Active Gases and Particles in the Atmosphere 243
   11.4.2 Radiative Forcing 245
   11.4.3 Feedbacks and Models 247
   11.4.4 Projected Changes in Concentrations, Forcing, and Climate 248
   11.4.5 Aircraft 251
