

EVOLUTION OF EARTH AND ITS CLIMATE

Birth, Life and Death of Earth

O.G. SOROKHTIN

*Dr. Sci., Prof. Oceanographic Institute, Russian Academy of Sciences, Moscow, Russia
Russian Academy of Natural Sciences, Moscow, Russia*

G.V. CHILINGARIAN

*Emeritus Professor of Engineering, University of Southern California, Los Angeles, California
Russian Academy of Natural Sciences, USA Branch, Los Angeles, California, USA*

N.O. SOROKHTIN

*Dr. Sci., Prof. Geological Institute, Kola Science Center
Russian Academy of Sciences, Apatity, Murmansk Reg., Russia
Russian Academy of Natural Sciences, Moscow, Russia*

Scientific Editor

DR. MICHAEL V. GORFUNKEL

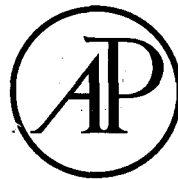

Dallas, TX, USA

Foreword xi

Introduction xvii

Part 1: Earth's Birth and Evolution Mechanisms 1

1. Major Stages and Methodology in the Evolution of Geological Concepts

Earlier Scientific Hypotheses of Earth's Evolution 3

Development of the Modern Theory of Earth's Lithospheric Shell Formation 6

Methodology of Constructing a General Theory of Earth's Global Evolution 8

2. Structure and Composition of Modern Earth

General Information About Earth 13

Earth's Atmosphere and Hydrosphere 15

Earth's Crust 19

The Earth's Mantle 30

Earth Core 34

Earth Core Composition 36

The Density of the Deep Earth 40

Temperature Distribution within Earth 46

Viscosity of Earth's Mantle Matter 56

3. Origin of Earth, its Past and Future

Origin of the Solar System 61

Formation of a Dual Planet Earth-Moon 66

Tidal Interaction of the Planets 68

Hypothetical Planet: Proto-Moon 71

Proto-Moon Catastrophe and the Birth of the Moon 74

Nature of the Planets' Axial Revolution and the Origin of Meteorites 79

Evolution of the Earth-Moon System 85

Primordial Earth Composition and Structure 99

Young Earth: Energetics and Heat Regime 105

Pre-Geological Earth Evolution in Katarchaeon 107

Catastrophe of Earth in the Distant Future 110

4. Process of Earth's Core Separation

Late beginning of Earth's Core Separation 113

A scenario of the Core Separation Process 116

Mechanism of Earth's Matter Zonal Differentiation 120

Barodiffusion Mechanism of Earth's Matter Differentiation 129

Process of Earth's Core Growth 138

Evolution of Chemical Composition of the Mantle 143

Empirical Evidence of the Core Separation Timing 151

5. Earth Energetics

Earth Accretion and Gravity Differentiation Energy 160

Contents of Radioactive Elements in Earth and their Decay Energy 164

Energy of Earth's Tidal Slow-Down 174

Heat Loss by Earth 179

Earth's Energy Balance and Tectonic Activity 183

Earth's Tectonic Activity 185

Evolution of Average Temperature in the Convective Mantle 188

Emergence of Earth's Magnetic Field: Possible Causes 190

6. Earth's Tectonic Activity and its Nature
- Possible Causes of Earth's Tectonic Activity 193
- Possible Mechanisms of Lithospheric Plate Movement 196
- Nature of Large-Scale Mantle Convection 201
- Convection in Earth Mantle 213
- Results of Modeling the Mantle's Chemico-Density Convection 219
- Evolution of Earth's Tectonic Activity 225
- General Patterns in Earth's Tectonic Evolution 227
- Membrane Tectonics (critique of "Hot Spot" Hypothesis in the Mantle) 229
- Part 2: Cause and Effect Relationships and Space-Time Regularities 239**
7. Evolution of the Crust-Formation Processes in Earth's History
- General Patterns of Oceanic Plate Formation 241
- Continental Crust Formation Mechanisms in Archaean 246
- Evolution of the Continental Crust 249
- Major Features of the Continental Crust Composition in Archaean 252
- Continental Lithosphere Formation Tectonic Regimes in Early Precambrian 258
- Continental Lithosphere Formation Process in Early Precambrian 261
- Early Precambrian Geodynamic Regimes, their Evolution, and Location 276
8. Lithospheric Plate Tectonics in Early Proterozoic and Phanerozoic
- Fundamentals of the Theory 285
- Formation of the Lithospheric Plates and Origin of Mid-Oceanic Ridges 294
- Structure and Functioning of the Lithospheric Plate Subduction Zones 303
- Geodynamics of the Plate Subduction Zones 308
- Mechanism of Oceanic Deposit Suck-in Under Continents 311
- Mountain and Mountain Belt Formation 317
- Earth's Crust Origin 327
- Verifying the Theory 331
9. Continental Drift in Earth's Geological History
- Continental Shield Evolution in Archaean 333
- Supercontinent Monogaea Formation in the end Archaean 335
- Disintegration of Monogaea and Formation of Megagaea Supercontinent in Early Proterozoic 337
- Disintegration of Megagaea and Mesogaea (Rodinia) Supercontinent Formation in Middle Riphean 341
- Disintegration of Mesogaea and Pangaea Formation at the end Paleozoic 345
- Continental Drift Evolution in Mesozoic and Cenozoic. Future Forecast 350
10. Major Patterns of Economic Deposit Concentration within Earth's Crust
- Earth's Crust ore and Lithophilic Element Concentration Mechanisms 355
- Earth's Core Separation and the Evolution of Metallogenic Environments 361
- Archaean Metallogeny 362
- Nature of a Unique Early Proterozoic Ore-Formation Epoch 364
- Effect of the Ocean and of Earth's Climates on the Formation of Early Proterozoic Sedimentary Economic Deposits 366
- Subduction Processes and the Formation of Diamond-Bearing and Affined Rocks 372
- Effect of Ancient Ore Deposits Remobilization (Recycling) 397
- Origin of the Exogenous Economic Deposits 402
- Tectonics of the Lithospheric Plates and Earth's oil and Gas Occurrences 404

Part 3: Nascence Mechanisms and Major Evolutionary Stages of Oceans, Atmosphere and Life on Earth 419

11. Hydrosphere: The Patterns of its Origin and Evolution

- Primary Degassing of the Mantle 421
- Formation of the Hydrosphere and the Oceans 424
- Hydrothermal Processes on the Ocean Floor 429
- Nature of the Global Marine Transgression on the Continents 435
- Earth's Tectonic Activity as Reflected in Fluctuations of the World Ocean Surface Level 436

12. Atmosphere: Origin and Physicochemical Aspects of Evolution

- Primordial Atmosphere of the Young Earth 439
- Degassing of Carbon Dioxide and Evolution of its Partial Pressure in the Archaean Atmosphere 440
- Nitrogen-Consuming Bacteria Effect on the Nitrogen's Partial Pressure 446
- Evolution of Oxygen'S Partial Pressure and Oxygenizing of the Atmosphere 449
- Major Patterns in Generation of the Abiogenic Methane 453
- Evolution of Atmospheric Composition and Pressure 460
- Absorption of the Solar UV Radiation by the Earth's Atmosphere 462

13. Adiabatic Theory of the Greenhouse Effect

- Introduction 469
- Major Features of the Present-day Earth's Atmosphere 471
- Adiabatic Theory of the Greenhouse Effect: Fundamentals 473
- Consideration of the Tropospheric air Humidity and Cloud Cover 484

- Consideration of the "Greenhouse" Gases 485
- Intensity of the Present-Day Earth's Synoptic Activity 488
- Effect of the Anthropogenic Factor on Earth's Climate 491
- Views of American Scientists on the Role of the Greenhouse Effect 492
- Oceanic Effect on Carbon Dioxide Content in the Atmosphere 493
- Special Opinion on the Substance of Kyoto Protocol 495

14. Evolution of Earth's Global Climate

- Climatic Paradox 499
- General Patterns in Earth's Climate Evolution 503
- Origin of Glaciation Epochs 505
- Effect of Continental Drift on Earth Climate 513
- Effect of Solar Activity on Climate 518
- Climatic Epochs of the Geological Past and Future 522

15. Origin and Major Stages of Life Evolution on Earth

- Uniqueness of Earth 525
- Origin of Life on Earth 526
- Effect of Geological Processes and Oxygen Accumulation on the Evolution of Life 530
- Effect of the Continental Drift and Marine Transgressions on the Phanerozoic Environments 535
- Effect of Glaciations on the Life of Large Mammals 545
- Future Evolution of Life and the Death of the Biosphere 546

Conclusions 549
