CONTENTS

Foreword ............................................. v
Preface .............................................. vii

PART I: INVITED PAPERS

Model Problems for Fish Schooling ............... 3
Silas Alben

The Challenge of Understanding and Quantifying Fish Responses to Turbulence-Dominated Physical Environments .......... 15
Aline J. Cotel and Paul W. Webb

The fluid dynamics of feeding in the upside-down jellyfish .......... 35
Christina Hamlet, Laura A. Miller, Terry Rodriguez, and Arvind Santhanakrishnan

Kinetic Models for Biologically Active Suspensions ............. 53
David Saintillan

Individual to collective dynamics of swimming bacteria ........... 73
Luis H. Cisneros, Sujoy Ganguly, Raymond E. Goldstein, and John O. Kessler

Dynamics, Control, and Stabilization of Turning Flight in Fruit Flies ............... 83
Leif Ristroph, Attila J. Bergou, Gordon J. Berman, John Guckenheimer, Z. Jane Wang, and Itai Cohen

Geometric Mechanics, Dynamics, and Control of Fishlike Swimming in a Planar Ideal Fluid .......... 101
Scott David Kelly, Parthesh Pujari, and Hailong Xiong

Slithering locomotion .................................. 117
David L. Hu and Michael Shelley

PART II: CONTRIBUTED PAPERS

Shark Skin Boundary Layer Control .................. 139
Amy Lang, Philip Motta, Maria Laura Habegger, and Robert Hueter
Numerical Modeling of the Performance of Ray Fins in Fish Locomotion .............................................. 151
  *Qiang Zhu and Kourosh Shoele*

Formation of Ocean Surface Patterns by Cetacean Fluke Oscillations ............................................. 159
  *Rachel Levy and David Uminsky*

Unsolved Problems in the Locomotion of Mammalian Sperm ...................................................... 167
  *Susan S. Suarez*

Computing optimal Strokes for Low Reynolds Number Swimmers ............................................. 177
  *Antonio Desimone, Luca Heltai, François Alouges, and Aline Lefebvre-Lepot*

Models of Low Reynolds Number Swimmers Inspired by Cell Blebbing ........................................... 185
  *Qixuan Wang, Jifeng Hu, and Hans Othmer*

A Low-Reynolds-Number Treadmilling Swimmer Near a Semi-infinite Wall ......................................... 197
  *Kiori Obuse and Jean-Luc Thiffeault*

Cilia Induced Bending of *Paramecium* in Microchannels .......................................................... 207
  *Saikat Jana, Junil Kim, Sung Yang, and Sunghwan Jung*

Rheology of Sheared Bacterial Suspensions .............................................................................. 217
  *Zhenlu Cui and Xiao-Ming Zeng*

A User-Friendly Formulation of the Newtonian Dynamics for the Coupled Wing-Body System in Insect Flight .............................................................. 225
  *Sheng Xu*

Efficient Flapping Flight Using Flexible Wings Oscillating at Resonance ......................................... 235
  *Hassan Masoud and Alexander Alexeev*

Stability of Passive Locomotion in Periodically-Generated Vortex Wakes .............................................. 247
  *Babak G. Oskouei and Eva Kanso*

Simulating Vortex Wakes of Flapping Plates .............................................................................. 255
  *J.X. Sheng, A. Ysasi, D. Kolomenskiy, M. Nitsche, E. Kanso, and K. Schneider*
A Velocity Decomposition Approach for Solving the Immersed Interface Problem with Dirichlet Boundary Conditions .................. 263
   Anita T. Layton

Elliptic Regularization and the Solvability of Self-Propelled Locomotion Problems .................................................. 271
   Adam Boucher

Comparative Studies Reveal Principles of Movement on and Within Granular Media ................................................... 281
   Yang Ding, Nick Gravish, Chen Li, Ryan D. Maladen, Nicole Mazouchova, Sarah S. Sharpe, Paul B. Umbanhowar, and Daniel I. Goldman

IMA Locomotion Workshop Participants ........................................... 293
