Contents

Symbols and Abbreviations xi

1. Weak convergence

1. Regularity of Probability Measures 1
2. The Topology of Weak Convergence 6
3. Miscellanea on Real Random Variables 18
4. Tightness Criteria in Linear Spaces 22
   a. Flat Concentration 23
   b. Tightness and Convolution 25
   c. Characteristic Functions 28
   d. Cylindrical Measures 30

Notes 35

2. The Central Limit Theorem for Real Valued Random Variables

1. Gaussian Limits 36
2. Generalized Poisson Limits 45
3. The General Central Limit Theorem: Direct Part 51
4. The General Central Limit Theorem: Converse Part; Infinitely Divisible Laws 56
5. Tightness of Sums and Exponentials 71
Contents

6. Stable Laws and Domains of Attraction

Notes

3. THE CENTRAL LIMIT THEOREM FOR RANDOM VARIABLES WITH VALUES IN SEPARABLE BANACH SPACES

1. The Invariance Principle

2. Some Basic Facts on Banach Valued Random Variables

3. A Concentration Inequality

4. Accompanying Poisson Laws

5. Découpage de Lévy and General Central Limit Theorem

6. Some Important Classes of Measures in Banach Spaces
   a. Infinitely Divisible Laws
   b. Lévy Measures
   c. Gaussian Probability Measures
   d. Stable Laws and Laws in Their Domains of Attraction

7. The Central Limit Theorem in Type 2 Spaces and in C(S)
   a. The Central Limit Theorem in Type 2 Spaces
   b. The C(S) Case

8. The Central Limit Theorem in Cotype 2 Spaces
   a. The Central Limit Theorem in Cotype 2 Spaces
   b. Accompanying Laws and Cotype $p$ Spaces

Appendix

   a. The Pietsch Factorization Theorem
   b. Equivalence of the Different Cotype 2 Properties
   c. A Basic Property of Cotype $p$ Spaces

Notes
