

CONTENTS

Preface	ix
Chapter 1. The Laplace Transform	1
1-1. Definition	1
1-2. Linear System	1
1-3. The Superposition Property.	2
1-4. Advantages of the Transform Method.	3
1-5. Transforms of Functions.	3
1-6. Transforms of Operations	4
1-7. Solution of a Differential Equation	5
1-8. Initial Condition	6
1-9. Summary	7
Chapter 2. More about the \mathcal{L} Transform	9
2-1. Mathematical Preliminaries.	9
2-2. Higher Derivatives	11
2-3. Integration	12
2-4. Transforms Involving Two Special Functions	13
2-5. Poles and Zeros	17
Chapter 3. The Impulse Function	22
3-1. Definition	22
3-2. Integrals	23
3-3. Relation to Step Function	24
3-4. Derivatives	25
3-5. Other Properties of the Impulse Function	26
3-6. Troubles at the Origin	27
3-7. Initial Conditions.	29
Chapter 4. Electrical Networks	32
4-1. Preliminaries	32
4-2. Networks	34
4-3. Loop Analysis.	36
4-4. Loop Analysis—General Network	38
4-5. Node Analysis.	40
4-6. Node Analysis—General Network.	42
4-7. Duals	43
4-8. Loop Method vs. Node Method	44
4-9. Mutual Inductance	45

Chapter 5. Further Topics in Electrical Networks.	51
5-1. Switching	51
5-2. Impedance.	56
5-3. Exchange of Sources.	59
5-4. Four-terminal Networks.	62
Chapter 6. Mechanical Systems.	68
6-1. Dynamics—Lagrange's Equations	68
6-2. Perturbation Equations—The Motion of a Satellite.	73
6-3. Gyroscopes	75
6-4. Analogs	80
6-5. Beams.	83
Chapter 7. Inverse Transforms	91
7-1. Transform Tables.	91
7-2. Partial Fractions.	92
7-3. Complex Roots	95
7-4. Residues	98
7-5. Poles and Zeros	100
7-6. s -Plane Geometry	101
Chapter 8. Properties of the Laplace Transform	108
8-1. Summary of Properties	108
8-2. Translation in t	109
8-3. Translation in s	112
8-4. Change of Scale	113
8-5. \mathcal{L} Transform of a Product	113
8-6. The Convolution Integral	114
8-7. Partial Derivatives and Integrals	117
8-8. Nonconstant Coefficients	119
8-9. Real and Imaginary Parts	121
8-10. Initial and Final Values.	122
8-11. Further Examples	123
Chapter 9. The System Function	128
9-1. The System Function	128
9-2. Block Diagrams	131
9-3. Impulse Response	134
9-4. Frequency Response.	136
9-5. Plotting Frequency Response	139
9-6. Summary of System Descriptions	148
Chapter 10. Feedback-system Analysis.	152
10-1. Linear Feedback Systems	152
10-2. System Poles and Zeros.	154
10-3. The Root-locus Method.	156
10-4. Plotting the Locus	157
10-5. Proofs of the Root-locus Rules.	161
10-6. The Nyquist Method	164
10-7. The Nyquist Diagram	166
10-8. Improving System Performance	172

Chapter 11. \mathcal{L}-transform Solution of Partial Differential Equations.	178
11-1. General Remarks	178
11-2. Vibrating String	179
11-3. Heat Conduction	181
11-4. Transmission Line	185
11-5. Summary and Table	186
Chapter 12. Fourier Series	189
12-1. Fourier Series	189
12-2. Finite Fourier Transforms	191
12-3. F_s and F_c Transforms	193
12-4. Solution of a Heat-conduction Problem	196
12-5. The Fourier Integral	197
Chapter 13. Fourier Transforms.	200
13-1. Fourier Transforms of Functions	200
13-2. Solution of Differential Equations	202
13-3. Steady State	204
13-4. Convolution and Other Properties	205
13-5. Fourier and Laplace Transforms	205
Chapter 14. Systems with Random Inputs: The Direct Description.	209
14-1. Probability	209
14-2. Probability Density	211
14-3. Averages	215
14-4. Characteristic Function	220
14-5. Correlation Function	221
Chapter 15. Systems with Random Inputs: The Frequency Description	227
15-1. Spectral Density	227
15-2. Fourier Transforms	229
15-3. The Fourier Transform of a Random Process	230
15-4. Filtered Noise	232
15-5. Calculation of Spectral Density	234
15-6. Transient Response to Random Input	240
15-7. Examples	241
15-8. Summary of Methods of Description	244
Chapter 16. Difference Equations and Z Transforms.	246
16-1. Difference Equations	246
16-2. Z Transforms	247
16-3. Inversion	249
16-4. Properties of Z Transforms	250
16-5. Solution of Difference Equations	254
16-6. Poles and Zeros	257
16-7. Summation of Infinite Series	257
16-8. Z-transform Tables	259
Chapter 17. Introduction to Mellin Transforms and a Summary of Transform Methods	262
17-1. The Mellin Transform	262
17-2. Properties of \mathfrak{M} Transforms	264

17-3.	\mathfrak{M} Transforms of Functions	265
17-4.	Solution of Equations by \mathfrak{M} Transforms	266
17-5.	Summary of Transform Methods	269
Appendix A.	Complex Variables.	271
A-1.	Basic Definitions and Algebra	271
A-2.	Analysis	272
A-3.	Complex Integration.	274
A-4.	Cauchy's Residue Theorem.	275
A-5.	Contour Integral Representation of the Unit Step and Impulse Functions	277
A-6.	The Laplace Inversion Formula	280
A-7.	Complex Convolution Formula.	281
A-8.	Inversion of the Z Transform	284
Appendix B.	Tabulation of \mathcal{L} Transforms	287
B-1.	\mathcal{L} Transforms of Operations and Functions	287
B-2.	Inverse \mathcal{L} Transforms	289
Index.	293
