4.3 $g_1$-inverses
4.4 $g_2$-inverses
4.5 $g_3$-inverses
4.6 The Cholesky technique

5 SINGULAR NORMAL VARIATES

5.1 Conditional means and variances of the normal multivariate distribution
5.2 Regression properties of the multivariate normal distribution
5.3 Reversible transformations of singular to nonsingular variates
5.4 Conditions for a second-degree polynomial in normal variates to have noncentral $\chi^2$ distribution

6 THE LINEAR MODEL OF LESS THAN FULL RANK

6.1 Introduction
6.2 Estimable linear functions
6.3 The method of imposed linear restrictions
6.4 Relationship between estimability and linear restrictions
6.5 Linear models with a priori linear constraints
6.6 Some aspects of partitioned linear models
6.7 Some statistical interpretations of g-inverses in linear estimation procedures

7 THE LINEAR MODEL WITH SINGULAR VARIANCE MATRIX

7.1 Introduction
7.2 The Goldman-Zelen method
7.3 The Zyskind-Martin method

CONCLUDING REMARKS
