CONTENTS

0. READING GUIDE

I. ELEMENTARY PRACTICE OF NON-的标准 ANALYSIS

Lesson 0 (quite classic) Infinitesimals................................. 1
Lesson 1 (with a slight non-standard flavour) Limits.................. 2
Lesson 2 (entirely non-standard) Continuity............................ 5
Lesson 3 Uniform continuity............................................. 7
Lesson 4 Derivatives and integrals.................................... 9
Lesson 5 Differentiability.................................................. 11
Lesson 6 Some notions of topology in \( \mathbb{R} \)......................... 15
Lesson 7 More real topology.............................................. 19
Lesson 8 From \( \mathbb{Q} \) to \( \mathbb{R} \)............................................. 21
Lesson 9 Digression on upper-bounded parts............................ 24
Lesson 10 Internal sequences............................................ 28
Lesson 11 From \( *\mathbb{Q} \) we may extract \( \mathbb{R} \)....................... 30

PLAYTIME

II. LOGICAL FOUNDATIONS OF NON-标准 ANALYSIS

Lesson 1 A review of the foundations : Z. F.......................... 38
Lesson 2 To be natural or not to be..................................... 46
Lesson 3 A non-standard extension of Z. F............................. 48
Lesson 4 Looking for enlargements in Z. F............................. 51
Lesson 5 Weak enlargements and ultrafilters........................... 58
Lesson 6 Enlargements in Z.F.C......................................... 61
Lesson 7 Internal set theory.............................................. 66

III. SOME CLASSICAL TOPICS FROM A NON-标准 POINT OF VIEW

Lesson 1 General topology................................................. 80
Lesson 2 Internal set theory with external sets....................... 87
Lesson 3 Compactness...................................................... 92
Lesson 4 Metric Spaces within I.S.T.E................................. 94
Lesson 5 Functional sequences........................................... 99
Lesson 6 Some exercises to get supple.................................. 101
Lesson 7 Integral curves of vector fields on \( \mathbb{R}^p \).................. 107
Lesson 8 The inverse function theorem.................................. 112
Lesson 9 Infinitesimal transformations and vector fields on
            manifolds.......................................................... 114
Lesson 10 Some intermediate objects in differential and
            algebraic topology.............................................. 119
Lesson 11 Holomorphic functions....................................... 123
### IV. NON STANDARD ANALYSIS AS A TOOL IN PERTURBATION PROBLEMS
