

TABLE OF CONTENTS

CHAPTER 1. ALGEBRAIC OPERATIONS WITH VECTORS AND SCALARS	1
1.1 Elementary Properties of Vectors	1
1.2 Scalar Product	4
1.3 Vector Product	5
1.4 The Lagrange Identity	6
1.5 Geometrical Applications	6
1.6 Linear Dependence and Representation of Vectors .	9
1.7 The Schmidt Orthonormalization Process	12
Examples	13
Problems	17
CHAPTER 2. FORMAL STRUCTURE OF VECTOR SPACES	19
2.1 Groups, Rings, Fields	19
2.2 Solvability and Number Concept Extension	20
2.3 Vector Spaces	23
2.4 Hilbert Space	24
Examples	24
Problems	28
CHAPTER 3. LINEAR TRANSFORMATIONS OF VECTORS	29
3.1 Matrices	29
3.2 Inverse Matrix	33

3.3	Theorem of Alternatives	38
3.4	Excess Variables and Excess Equations	40
3.5	Dyadic and Tensor Operators	41
3.6	Vector Transforms; Unitary and Hermitian Matrices	46
3.7	Forms of the Algebraic Eigenvalue Problem	48
3.8	Diagonalization of Hermitian Matrices	48
3.9	Principal Axis Transformation	51
3.10	Degeneracy	52
	Examples	54
	Problems	58

CHAPTER 4. VECTOR-FUNCTION ANALOGIES 60

4.1	Distance and Angle in Function Space	60
4.2	Fundamental Inequalities	63
4.3	Orthonormal Sets of Functions	64
4.4	Integral Equations: Fredholm Approach	65
4.5	Integral Equations: Hilbert-Schmidt Approach	70
4.6	Unitary Integral Transforms	74
4.7	Coupled Oscillators	76
4.8	Normal Coordinates	78
4.9	Unitary Transformations of Eigenvectors	79
4.10	Hilbert Space	81
	Examples	82
	Problems	84

CHAPTER 5. VECTORIAL DIFFERENTIATION AND INTEGRATION 86

5.1	Differentiation and Integration of Vectors	86
5.2	Differential Geometry of Space Curves and Surfaces	89
5.3	Gradient	98
5.4	Divergence and Laplacian	101
5.5	Curl	107
5.6	Vector Fields and Helmholtz's Theorem	111
5.7	Multiple Integration and Jacobian	113
5.8	Vectorial Differential Equations	115
5.9	Vectorial Variational Calculus and Hamilton's Principle	118
5.10	Fermat's Principle and Mechanical Optical Analogy	121

5.11	Dirichlet's Principle	122
	Examples	123
	Problems	130

CHAPTER 6. TENSOR ANALYSIS AND CURVILINEAR COORDINATES 135

6.1	Contravariant and Covariant Vectors	135
6.2	Tensors, Symmetrants and Alternants	138
6.3	Metric Tensors	140
6.4	Relative Tensors, Pseudotensors and Pseudoscalars	142
6.5	Quotient Law for Tensors	146
6.6	Covariant Differentiation	146
6.7	Riemann-Christoffel, Ricci and Einstein Tensors ...	148
6.8	Curvilinear Coordinate Systems	149
	Examples	161
	Problems	164

CHAPTER 7. FOURIER ANALYSIS, QUANTUM MECHANICS AND GREEN'S FUNCTIONS 166

7.1	Scalar Fourier Series and Transforms	166
7.2	Vectorial Fourier Series and Transforms	174
7.3	The Cauchy-Poisson Theorem and Lattice Sums ..	178
7.4	Wave Mechanics	182
7.5	Ehrenfest's Theorem	185
7.6	Schrödinger's Equation	186
7.7	Potential Well	188
7.8	Self-Adjoint Differential Eigenvalue Problems ...	190
7.9	Wave-Particle Dualism	193
7.10	Bandwidth-Duration Principle	194
7.11	Uncertainty Principle	196
7.12	Operator Symbolism and Commutators	199
7.13	Hydrogen Atom	201
7.14	Harmonic Oscillator	204
7.15	Equivalence of Matricial and Differential Formu- lations	206
7.16	Heisenberg and Schrödinger Interpretations	209
7.17	Boson and Fermion Annihilators and Creators ...	212
7.18	Transmission Barrier	214

7.19	Scattering Amplitude and Cross-Sections	216
7.20	Green's Functions for Sturm-Liouville Problems . . .	218
7.21	Green's Functions as Kernels	223
7.22	Reciprocity and Vectorial Operators	224
7.23	Green's Functions: Wave, Helmholtz and Laplace Equations	226
7.24	The Kirchhoff-Born Approximation	228
7.25	Optical Theorem	230
	Examples	231
	Problems	244

CHAPTER 8. FOUR-DIMENSIONAL VECTOR ANALYSIS 247

8.1	Space-Time and Minkowskian Metric	247
8.2	The Lorentz Transformation	249
8.3	Relativistic Paradoxes and the Null Cone	252
8.4	4-Vectors and the Relativistic Energy Relation	253
8.5	Relativistic Electromagnetics	257
8.6	The Klein-Gordon Equation	260
8.7	Clifford Algebra and Hypercomplex Vectors	261
8.8	The Dirac Equation, Hole Theory and Spinors	265
8.9	An Alternative Derivation of Relativistic Mechanics Examples	270
	Problems	276

CHAPTER 9. QUATERNIONS 277

9.1	Commutativity and Conical Rotations	277
9.2	Quaternion Maxwell Equations	279
9.3	Quaternion Form of Wave-Particle Dualism	280
	Problems	282

**CHAPTER 10. SUMMARY OF CLASSICAL MECHANICS,
ELECTROMAGNETICS AND DIFFUSION 283**

10.1	Mechanics of a Mass Point	283
10.2	Orbits Under Central Forces	286
10.3	The Two-Body Problem and Keplerian Orbits . . .	287
10.4	Inertial Systems and Pseudoforces	289
10.5	Multiparticulate Systems and Virial Theorem . . .	291

10.6	Rigid Body Motions	293
10.7	The Hamilton-Jacobi Equation	294
10.8	Elastodynamics	295
10.9	Elastostatics	300
10.10	Viscous Fluids	302
10.11	Hydrodynamics of Ideal Fluids	305
10.12	Equation of Mass Conservation	305
10.13	Irrotational Flows	306
10.14	Vortices	307
10.15	General Flow of Fluids	309
10.16	Hydrostatics	310
10.17	Acoustics	311
10.18	Maxwell's Equations	313
10.19	Electrostatics	315
10.20	Magnetostatics	317
10.21	Stationary Electrokinetics	318
10.22	Retarded Potentials and the Hertz Vector	319
10.23	Hertzian Dipole Field	321
10.24	The Poynting Vector and Energy Flow	322
10.25	Electromagnetic Waves in Plasma	323
10.26	Magnetic Pressure, Convection and Diffusion	330
10.27	Hydromagnetic Waves	331
10.28	Diffusion	332
10.29	The Boltzmann Transport Equation	334
