Contributors *vii*
Preface *ix*

Positive Functions and Some Applications to Stability Questions for Numerical Methods 1
Germund Dahlquist

Constructive Polynomial Approximation in Sobolev Spaces 31
Todd Dupont and Ridgway Scott

Questions of Numerical Condition Related to Polynomials 45
Walter Gautschi

Global Homotopies and Newton Methods 73
Herbert B. Keller

Problems with Different Time Scales 95
Heinz-Otto Kreiss

Accuracy and Resolution in the Computation of Solutions of Linear and Nonlinear Equations 107
Peter D. Lax

Finite Element Approximations to the One-Dimensional Stefan Problem 119
J. A. Nitsche

The Hodie Method and Its Performance for Solving Elliptic Partial Differential Equations 143
Robert E. Lynch and John R. Rice

Solving ODE's with Discrete Data in SPEAKEASY 177
L. F. Shampine

Perturbation Theory for the Generalized Eigenvalue Problem 193
G. W. Stewart

Some Remarks on Good, Simple, and Optimal Quadrature Formulas 207
H. F. Weinberger

Linear Differential Equations and Kronecker's Canonical Form 231
J. H. Wilkinson

Index 267
