Series Editor's Preface v

Preface xiii

CHAPTER I. Third Order Linear Homogeneous Differential Equations in Normal Form 1

§1. Fundamental Properties of Solutions of the Third Order Linear Homogeneous Differential Equation 1

1. The Normal Form of a Third Order Linear Homogeneous Differential Equation 1
2. Adjoint and Self-adjoint Third Order Linear Differential Equations 2
3. Fundamental Properties of Solutions 4
4. Relationship between Solutions of the Differential Equations (a) and (b) 5
5. Integral Identities 7
6. Notion of a Band of Solutions of the First, Second and Third Kinds 8
7. Further Properties of Solutions of the Differential Equation (a) Implied by Properties of Bands 13
8. Weakening of Property (v) for the Laguerre Invariant 18

§2. Oscillatory Properties of Solutions of the Differential Equation (a) 21

1. Basic Definitions 21
2. Sufficient Conditions for the Differential Equation (a) to Be Disconjugate 22

3. Sufficient Conditions for Oscillatoricity of Solutions of the Differential Equation (a) 26
4. Further Conditions Concerning Oscillatoricity or Non-oscillatoricity of Solutions of the Differential Equation (a) 31
5. Relation between Solutions without Zeros and Oscillatoricity of the Differential Equation (a) 34
6. Sufficient Conditions for Oscillatoricity of Solutions of the Differential Equation (a) in the Case $A(x) \geqq 0$, $x \in (a, \infty)$ 44
7. Conjugate Points, Principal Solutions and the Relationship between the Adjoint Differential Equations (a) and (b) 49
8. Criteria for Oscillatoricity of the Differential Equations (a) and (b) Implied by Properties of Conjugate Points 60
9. Further Criteria for Oscillatoricity of the Differential Equation (b) 75
10. The Number of Oscillatory Solutions in a Fundamental System of Solutions of the Differential Equation (a) 84
11. Criteria for Oscillatoricity of Solutions of the Differential Equation (a) in the Case that the Laguerre Invariant Does Not Satisfy Condition (v) 90
12. The Case, When the Laguerre Invariant Is an Oscillatory Function of x 98
13. The Differential Equation (a) Having All Solutions Oscillatory in a Given Interval 106

§3. Asymptotic Properties of Solutions of the Differential Equations (a) and (b) 117
1. Asymptotic Properties of Solutions without Zeros of the Differential Equations (a) and (b) 117
2. Asymptotic Properties of Oscillatory Solutions of the Differential Equation (b) 136
3. Asymptotic Properties of All Solutions of the Differential Equation (a) 143

§4. Boundary Value Problems 155
1. The Green Function and Its Applications 155

2. Further Applications of Integral Equations to the Solution of Boundary-value Problems 162
3. Generalized Sturm Theory for Third Order Boundary-value Problems 165
4. Special Boundary-value Problems 180

CHAPTER II. Third Order Linear Homogeneous Differential Equations with Continuous Coefficients 190
§5. Principal Properties of Solutions of Linear Homogeneous Third Order Differential Equations with Continuous Coefficients 190
1. Principal Properties of Solutions of the Differential Equation (A) 190
2. Bands of Solutions of the Differential Equation (A) 193
3. Application of Bands to Solving a Three-point Boundary-value Problem 196
§6. Conditions for Disconjugateness, Non-oscillatoricity and Oscillatoricity of Solutions of the Differential Equation (A) 198
1. Conditions for Disconjugateness of Solutions of the Differential Equation (A) 198
2. Solutions without Zeros and Their Relation to Oscillatoricity of Solutions of the Differential Equation (A) 208
3. Conditions for the Existence of Oscillatory Solutions of the Differential Equation (A) 211
4. On Uniqueness of Solutions without Zeros of the Differential Equation (A) 212
5. Some Properties of Solutions of the Differential Equation (A) with $r(x) \leqq 0$ 214
§7. Comparison Theorems for Differential Equations of Type (A) and Their Applications 216
1. Comparison Theorems 217
2. A Simple Application of Comparison Theorems 219
3. Remark on Asymptotic Properties of Solutions of the Differential Equation (A) 220

CHAPTER III. Concluding Remarks 222
1. Special Forms of Third Order Differential Equations 222
2. Remark on Mutual Transformation of Solutions of Third Order Differential Equations 224

CHAPTER IV. Applications of Third Order Linear Differential Equation Theory 227
§8. Some Applications of Linear Third Order Differential Equation Theory to Non-linear Third Order Problems 227
1. Application of Quasi-linearization to Certain Problems Involving Ordinary Third Order Differential Equations 227
2. Three-point Boundary-value Problems for Third Order Non-linear Ordinary Differential Equations 238
3. On Properties of Solutions of a Certain Non-linear Third Order Differential Equation 240
§9. Physical and Engineering Applications of Third Order Differential Equations 247
1. On Deflection of a Curved Beam 248
2. Three-layer Beam 255
3. Survey of Some Other Applications of Third Order Differential Equations 257
