Contents

Preface v

CHAPTER 1
The Role of Graphics in Data Exploration 1

1. Introduction 1
2. Historical Background 3
3. Content of the Book 4
4. Central Data Sets 5
5. Different Types of Data 8
6. Computer Programs 12

CHAPTER 2
Graphics for Univariate and Bivariate Data 13

1. Introduction 13
2. Graphics for Univariate Data 14
3. Stem-and-Leaf Plots 26
4. Graphics for Bivariate Data 30
5. Graphical Perception 33

CHAPTER 3
Graphics for Selecting a Probability Model 36

1. Introduction 36
2. Discrete Models 37
3. Continuous Models 39
4. General 53

CHAPTER 4
Visual Representation of Multivariate Data 54

1. Introduction 54
2. "Scatterplots" in More Than Two Dimensions 54
3. Profiles 55
4. Star Representations 57
5. Glyphs 57
6. Boxes 59
7. Andrews' Curves 59
8. Chernoff Faces 64
9. General 71

CHAPTER 5
Cluster Analysis 73

1. Introduction 73
2. The Probability Approach 74
3. Measures of Distance and Similarity 74
4. Hierarchical Cluster Analysis 78
5. Computer Programs for Hierarchical Cluster Analysis 82
6. Digraphs 88
7. Spanning Trees 90
8. Cluster Analysis of Variables 94
9. Application of Cluster Analysis to Fitness/Cholesterol Data 98
10. Other Graphical Techniques of Cluster Analysis 103
11. General 104

CHAPTER 6
Multidimensional Scaling 105

1. Introduction 105
2. The Biplot 107
3. Principal Component Analysis 114
4. Correspondence Analysis 121
5. Classical (Metric) Scaling 127
6. Non-Metric Scaling 131
7. Three-Way Multidimensional Scaling (INDSCAL) 144
8. Guttman's Techniques 151
9. Facet Theory 156
10. Partial Order Scalogram Analysis 164
11. General 174

CHAPTER 7
Graphical Representations in Regression Analysis 176

1. Introduction 176
2. The Scatterplot 178
3. Residual Plots 194

4. Mallows' C_k-Statistic 215
5. Confidence and Forecast Bands 218
6. The Ridge Trace 219
7. General 223

CHAPTER 8
CHAID and XAID: Exploratory Techniques for Analyzing Extensive Data Sets 224

1. Introduction 224
2. CHAID—An Exploratory Technique for Analyzing Categorical Data 224
3. Applying a CHAID Analysis 229
4. XAID—An Exploratory Technique for Analyzing a Quantitative Dependent Variable with Categorical Predictors 236
5. Application of XAID Analysis 237
6. General 242

CHAPTER 9
Control Charts 245

1. Introduction 245
2. Process Capability 246
3. Control Charts for Items with Quantitative Characteristics 247
4. Control Charts for Dichotomous Measurements (P-Chart) 251
5. Cumulative Sum Charts 252
6. Cumulative Sine Charts 259
7. General 263

CHAPTER 10
Time Series Representations 264

1. Representations in the Time Domain 264
2. Representations in the Frequency Domain 274

CHAPTER 11
Further Useful Graphics 283

1. Graphics for the Two-Sample Problem 283
2. Graphical Techniques in Analysis of Variance 289
3. Four-Fold Circular Display of 2×2 Contingency Tables 295
