

TABLE OF CONTENTS

I.	THE HAMILTONIAN STRUCTURE OF CONTINUUM MECHANICS IN MATERIAL, INVERSE MATERIAL, SPATIAL AND CONVECTIVE REPRESENTATIONS by DARRYL D. HOLM, JERROLD E. MARSDEN, and TUDOR S. RATIU	11
	ABSTRACT	13
1.	INTRODUCTION	14
	Acknowledgments	25
2.	REDUCTION OF DUAL BUNDLES	26
3.	SEMIDIRECT PRODUCTS AND HAMILTONIAN SYSTEMS WITH PARAMETERS	36
	3.1 Notation and Conventions Concerning Semidirect Products .	36
	3.2 Semidirect Product Bundles	40
	3.3 Hamiltonians Depending on Parameters	43
	3.4 Lie-Poisson Structures for Semidirect Products	46
	Appendix	56
4.	CONTINUUM MECHANICAL CONSIDERATIONS	64
5.	THE HEAVY TOP	69
	5.1 The Material Phase Space	69
	5.2 The Lie Algebra $so(3)$ and Its Dual	72
	5.3 The Hamiltonian	73
	5.4 Heavy Top in Convective Picture	82
	5.5 The Heavy Top in Space Coordinates	84
	5.6 Completely Integrable Cases	88

6.	IDEAL COMPRESSIBLE ADIABATIC FLUIDS	93
6.1	The Material Phase Space	93
6.2	The Lie Group $\text{Diff}(D)$ and Its Lie Algebra $X(D)$	94
6.3	Equations of Motion	100
6.4	The Hamiltonian in the Lagrangian and Convective Representations	104
6.5	The Ideal Compressible Adiabatic Fluid Equations in the Eulerian Picture	111
6.6	The Ideal Compressible Adiabatic Fluid Equations in the Convective Picture	114
7.	CONCLUSIONS	121
	REFERENCES	122

II.	LYAPUNOV STABILITY OF IDEAL COMPRESSIBLE AND INCOMPRESSIBLE FLUID EQUILIBRIA IN THREE DIMENSIONS by DARRYL D. HOLM	125
-----	--	-----

	ABSTRACT	127
1.	INTRODUCTION	128
2.	INVISCID DYNAMICS OF INCOMPRESSIBLE AND BAROTROPIC COMPRESSIBLE FLUIDS	134
2.1	Equations of Motion and Notation	134
2.2	Kelvin's Circulation Theorem, Ertel's Theorem, and Kinematic Conservation Laws	136
2.3	Equilibrium State Relations	146

(Part II concluded)

3.	FLUID STABILITY ANALYSIS IN THREE DIMENSIONS	149
3.1	Terminology Regarding Stability	149
3.2	Relative Equilibria for Incompressible Fluids	154
3.3	Stability Analysis for Incompressible Flow	162
3.4	Conditional Stability for Three-Dimensional Flows	165
3.5	Stability Analysis for Barotropic Flow	169
3.6	Conclusion	173
	ACKNOWLEDGMENTS	175
	APPENDIX A LAGRANGIAN AND EULERIAN ACTION PRINCIPLES AND HAMILTONIAN FORMULATIONS OF FLUID DYNAMICS	176
A.1	Symmetries and Conserved Quantities in the Lagrangian Specification of Fluid Flows	177
A.2	Symmetries and Conserved Quantities in the Eulerian Specification of Fluid Flows	190
	APPENDIX B SYMMETRIES, RELATIVE EQUILIBRIA, AND C-FRAMES, AS WELL AS SOME REMARKS ON STABILITY, ALL IN THE CONTEXT OF A SIMPLE EXAMPLE	197
	REFERENCES	206
