Contributors  xiii

1. Eigenvalue problems, J.H. Wilkinson  1

2. Numerical linear algebra in statistical computing,  
   N.J. Higham and G.W. Stewart  41

3. Sparse matrices, J.K. Reid  59

4. Multivariate approximation, Carl de Boor  87

5. Data approximation by splines in one and two  
   independent variables, M.G. Cox  111

6. Methods for best approximation and regression  
   problems, G.A. Watson  139

7. Branch cuts for complex elementary functions,  
   W. Kahan  165

8. Recent developments in linear and quadratic  
   programming, R. Fletcher  213

9. Solving systems of nonlinear equations by tensor  
   methods, R.B. Schnabel and P.D. Frank  245

10. Numerical methods for bifurcation problems,  
    A.D. Jepson and A. Spence  273

11. On the iterative solution of differential and integral  
    equations using secant updating techniques, A. Griewank  299

12. Methods for nonlinear constraints in optimization  
    calculations, M.J.D. Powell  325

13. The influence of vector and parallel processors on  
    numerical analysis, I.S. Duff  359

14. Developments in stability theory for ordinary  
    differential equations, J.D. Lambert  409

15. Stiff ODE initial value problems and their solution,  
    A.R. Curtis  433

17. The state of the art in the numerical treatment of  
    integral equations, C.T.H. Baker  473
18. Strongly elliptic boundary integral equations, W.L. Wendland  
19. Collocation methods for one-dimensional Fredholm and Volterra integral equations, H. Brunner  
20. Numerical methods for free and moving boundary problems, C.W. Cryer  
21. Multigrid methods for elliptic equations, J. Walsh  
22. Galerkin finite element methods and their generalizations, K.W. Morton  
23. Recent developments in the numerical solution of nonlinear conservation laws, S. Osher and P.K. Sweby
