Contributors	xiii
1. Eigenvalue problems, <i>J.H. Wilkinson</i>	1
2. Numerical linear algebra in statistical computing, <i>N.J. Higham and G.W. Stewart</i>	41
3. Sparse matrices, <i>J.K. Reid</i>	59
4. Multivariate approximation, <i>Carl de Boor</i>	87
5. Data approximation by splines in one and two independent variables, <i>M.G. Cox</i>	111
6. Methods for best approximation and regression problems, <i>G.A. Watson</i>	139
7. Branch cuts for complex elementary functions, <i>W. Kahan</i>	165
8. Recent developments in linear and quadratic programming, <i>R. Fletcher</i>	213
9. Solving systems of nonlinear equations by tensor methods, <i>R.B. Schnabel and P.D. Frank</i>	245
10. Numerical methods for bifurcation problems, <i>A.D. Jepsen and A. Spence</i>	273
11. On the iterative solution of differential and integral equations using secant updating techniques, <i>A. Griewank</i>	299
12. Methods for nonlinear constraints in optimization calculations, <i>M.J.D. Powell</i>	325
13. The influence of vector and parallel processors on numerical analysis, <i>I.S. Duff</i>	359
14. Developments in stability theory for ordinary differential equations, <i>J.D. Lambert</i>	409
15. Stiff ODE initial value problems and their solution, <i>A.R. Curtis</i>	433
16. Order stars and stability, <i>G. Wanner</i>	451
17. The state of the art in the numerical treatment of integral equations, <i>C.T.H. Baker</i>	473

18. Strongly elliptic boundary integral equations, <i>W.L. Wendland</i>	511
19. Collocation methods for one-dimensional Fredholm and Volterra integral equations, <i>H. Brunner</i>	563
20. Numerical methods for free and moving boundary problems, <i>C.W. Cryer</i>	601
21. Multigrid methods for elliptic equations, <i>J. Walsh</i>	623
22. Galerkin finite element methods and their generalizations, <i>K.W. Morton</i>	645
23. Recent developments in the numerical solution of nonlinear conservation laws, <i>S. Osher and P.K. Sweby</i>	681
