Contents

v    PREFACE

1. LECTURE 1. The Probabilistic Method

    Ramsey $R(k, k)$; Asymptotics; $R(k, t)$, $k$ fixed; Tournaments with $S_k$; Extreme Tails and Ranking Tournaments; Edge Discrepancy; Linearity of Expectation; Addendum; Property B; van der Waerden; References

11 LECTURE 2. The Deletion Method and Other Refinements

    Ramsey $R(k, k)$; Off-Diagonal Ramsey Numbers; Turan's Theorem; Property B; Tournament Ranking; References

17 LECTURE 3. Random Graphs I

    Threshold Functions; The Second Moment Method; Poisson Approximation; The Zero-One Law; Evolution Near $p = 1/n$; Connectivity; Addendum: Number Theory; References

29 LECTURE 4. Large Deviations and Nonprobabilistic Algorithms

    Large Deviation; Discrepancy; A Dynamic Algorithm; The Pusher-Chooser Game; A Hyperbolic Cosine Algorithm; Let the Chips Fall Where They May; References

37 LECTURE 5. Discrepancy I

    Hereditary and Linear Discrepancy; Some Examples; Matrix Form; Reduction by Linear Algebra; Reduction to Approximating $1/3$, Simultaneous Round-Off; Two Conjectures; Convex Sets; Reference
LECTURE 6. Chaos from Order

The Gale-Berlekamp Switching Game; Scrambling the Rows; A Dynamic Algorithm; Edge Discrepancy; Tournament Ranking; References

LECTURE 7. Random Graphs II

Clique Number Concentration; Chromatic Number; Addendum: A Better Coloring; Sparse Graphs; An Early Gem; Concentration via Martingales; References

LECTURE 8. The Lovász Local Lemma

The Lemma; The Diagonal Ramsey Function; The van der Waerden Function; Algorithm?, Addendum: Joke; Anti van der Waerden; Compactness; The General Case; Lower Bound $R(3, k)$; References

LECTURE 9. Discrepancy II

The Beck-Fiala Theorem; The Pigeonhole Principle; The Weak Theorem; Floating Colors; The Komlos Conjecture; The Barany-Grunberg Theorem; An Olympiad Problem; Work in Progress; References

LECTURE 10. Six Standard Deviations Suffice
