CONTENTS

7.	INTRODUCTION	9
1.1.	Preliminary remarks	9
1.2.	Scope of monograph	11
1.3.	Plan of monograph, comments	12
2.	BOUNDARY VALUE PROBLEMS AND IRREGULAR NETWORKS	17
2.1.	A class of elliptic problems	17
2.2.	Irregular networks	23
2.2.1.	Networks of triangles and rectangles	23
2.2.2.	Locally irregular networks	27
2.3.	Secondary networks and boxes	29
2.3.1.	General remarks	29
2.3.2.	Secondary networks via the perpendicular bisectors (PB)	30
2.3.3.	Secondary networks via the medians (MD)	36
3.	CONSTRUCTION OF FINITE DIFFERENCE APPROXIMATIONS	40
3.1.	The principle of approximation	40
3.2.	Finite difference schemes via method (PB)	43
3.2.1.	The approximation of the balance equations	43
3.2.2.	Finite difference schemes of the type (PB)	47
3.3.	Finite difference schemes via method (MD)	48
3.3.1.	Quadrature formulas for the balance equations	48
3.3.2.	Finite difference quotients	50
3.3.3.	Finite difference schemes of the type (MD)	52
4.	ANALYTICAL AND MATRIX PROPERTIES OF THE DIFFERENCE OPERATORS $\mathbf{A_h}$	55
4.1.	General remarks and notations	55
4.2.	Monotonicity and other matrix properties	57
4.2.1.	Operators $A_{\mathbf{h}}$ and matrices via method (PB)	57
4.2.2.	MD-operators ${ t A}_{ extbf{h}}$ in comparison with PB-operators	60
4.3.	Scalar products, norms and a trace theorem	64
4.3.1.	Notations for scalar products and norms	64
4.3.2.	Ω - Ω _h -equivalence for norms of special functions	67
4.3.3.	Γ-Γ _h -relations for norms of special functions	70
4.3.4.	Relations between "continuous" and "discrete" norms	72
4.3.5.	A trace theorem and the equivalence of certain grid norms	. 73

4.4.	Green's formula, inequalities of Friedrichs-Poincarétype and the positive definiteness of ${\tt A}_{h}$	75
4.4.1.	Green's formula, the symmetry and the "energy" of Ah	75
4.4.2.	Inequalities of Friedrichs-Poincaré-type	78
4.4.3.	The positive definiteness of Ah	80
4.5.	A priori estimates for A_h using the W_2^1 - and C-norm	85
4.5.1.	A priori estimates using the W2-norm	85
4.5.2.	"Weak imbedding" of $W_2^1(\overline{\omega})$ in $C(\overline{\omega})$	88
4.5.3.	A priori estimates using the C-norm	90
5.	ERROR ESTIMATES AND CONVERGENCE	96
5.1.	Error splitting and approaches to the error estimation	96
5.1.1.	Introductory remarks and error splitting for PB-schemes	96
5.1.2.	Two kinds of error splitting for MD-schemes	99
5.1.3.	A priori estimates of the error	102
5.1.4.	Convergence for classical solutions of $C^1(\bar{\Omega})$ -type (1>2)	106
5.1.5.	Convergence for generalized solutions of $W_2^1(\Omega)$ -type (1 >	2)1 08
5.2.	The error 36 of the principal part of PB-operators	109
5.2.1.	The splitting of and first estimates	109
5.2.2.	The choice of local estimation regions	112
5.2.3.	The estimation of \mathcal{R}_{k} and \mathcal{R}_{g}	114
5.2.4.	The estimation of & ,	119
5.2.5.	The weakening of the assumptions and conclusions	122
5.3.	The error ≈ of the principal part of MD-operators	124
5.3.1.	Splittings and estimates via centres of gravity	124
5.3.2.	Splittings and estimates via mesh midpoints	127
5.4.	The error ψ_N for PB- and MD-schemes	132
5.4.1.	γ_{N} -estimates for grid points $x \in \omega$	132
5.4.2.	γ_{N} -estimates for grid points $x \in \gamma_{23}$	135
5.4.3.	The modification and weakening of some assumptions	142
5.5.	Convergence for $W_2^2(\Omega)$ -solutions	146
5.5.1.	Convergence in the discrete W2-norm	146
5.5.2.	Convergence in the discrete C-norm	149
6.	FINITE DIFFERENCE SCHEMES FOR NONSYMMETRIC PROBLEMS	150
6.1.	Construction of finite difference approximations	150
6.1.1.	Boundary value problem and balance equations	150
6.1.2.	Upwind difference quotients	152
6.1.3.	Further difference quotients and the FDSs $A_h^b y = F_h$	154
6.2.	Properties of the difference operators Ab	158
6.2.1.	Monotonicity and a priori estimates	158
6.2.2.	Positive definiteness and a priori estimates	161

6.3. The error ψ_{K} of the convection term	162
6.3.1. Error splitting and estimates	162
6.3.2. The approach to estimating ψ_K for $u \in W_2^1(\Omega)$ (1>2)	164
6.3.3. Local and global bounds of ψ_K	166
6.4. Convergence for $C^1(\overline{\Omega})$ - and $W_2^1(\Omega)$ -solutions $(1 \ge 2)$	172
7. CONCLUDING REMARKS	174
APPENDICES	181
1. Appendix DI: Relations of Differential and Integral calculus, norms	181
2. Appendix ES: Estimation of functionals on Sobolev spaces	183
3. Appendix EX: Extension of functions	185
4. Appendix GE: Some relations of geometry	186
5. Appendix IM: Imbedding and trace theorems	187
6. Appendix TR: Affine transformations of coordinates and functionals	190
