CONTENTS

Preface vii

Contributors xi

1. On effective approximations to cubic irrationals.
   A. BAKER and C. L. STEWART 1

2. Applications of measure theory and Hausdorff dimension
   to the theory of Diophantine approximation.
   V. I. BERNIK 25

3. Galois representations and transcendental numbers.
   D. BERTRAND 37

4. Some new results on algebraic independence of E-functions.
   F. BEUKERS 56

5. Algebraic values of hypergeometric functions.
   F. BEUKERS and J. WOLFART 68

6. Some new applications of an inequality of Mason.
   B. BRINDZA 82

   W. D. BROWNAWELL 90

   P. ERDŐS 102

   J.-H. EVERTSE, K. GYŐRY, C. L. STEWART
   and R. TIJDEMAN 110

10. Decomposable form equations.
    J.-H. EVERTSE and K. GYŐRY 175

11. On Gelfond’s method.
    N. I. FELDMAN 203
12. On effective bounds for certain linear forms. 207
   A. I. GALOCHKIN

13. Automata and transcendence. 215
    J. H. LOXTON

14. The study of Diophantine equations over function fields. 229
    R. C. MASON

15. Linear relations on algebraic groups. 248
    D. W. MASSER

16. Estimates for the number of zeros of certain functions. 263
    Yu. V. NESTERENKO

17. An application of the $S$-unit theorem to modular forms on $\Gamma_0(N)$ 270
    R. W. K. ODONI

18. Lower bounds for linear forms in logarithms. 280
    P. PHILIPPON and M. WALDSCHMIDT

19. Reducibility of lacunary polynomials, IX. 313
    A. SCHINZEL

20. The number of solutions of Thue equations. 337
    W. M. SCHMIDT

21. On arithmetic properties of the values of $E$-functions. 347
    A. B. SHIDLOVSKY

22. Some exponential Diophantine equations. 352
    T. N. SHOREY

23. Arithmetic specializations theory. 366
    V. G. SPRINDŽUK

24. On the transcendence methods of Gelfond and Schneider in several variables. 375
    M. WALDSCHMIDT

25. A new approach to Baker's theorem on linear forms in logarithms III. 399
    G. WÜSTHOLZ

26. Linear forms in logarithms in the $p$-adic case. 411
    KUNRUI YU
