CONTENTS

Preface ix
Acknowledgments xv
List of Symbols xvii

1. Convex sets 1
   1. Introduction, 1
   2. Convex sets and cones, 1
   3. Functions valued in a convex set, 6
   4. Notes, 7

2. Matrix theory background 9
   1. Introduction, 9
   2. The Jordan and real canonical forms, 9
   3. Nonnegative matrices, 15
   4. M-matrices, 19
   5. The Frobenius normal form, 24
   6. Notes, 29

3. Differential and control system preliminaries 31
   1. Introduction, 31
   2. Linear differential systems, 31
   3. Linear control systems: controllability, observability, and realizability, 35
   4. Glossary of models, 54
   5. Notes, 58

4. Exponentially nonnegative matrices 61
   1. Introduction, 61
   2. Holdable closed convex sets: geometric considerations, 65
3. Exponentially nonnegative matrices, 70
4. Notes, 83

5. Extended $M$-matrices 85
   1. Introduction, 85
   2. Extended $M$-matrices, 86
   3. Further results, 88
   4. Notes, 91

6. Cone reachability 93
   1. Introduction, 93
   2. Basic properties of reachability cones, 94
   3. Cone reachability: simple cases, 98
   4. Cone reachability: the case of a real spectrum, 102
   5. The boundary of the reachability cone, 110
   6. Cone reachability for discrete approximations to the differential equation, 115
   7. Notes, 124

7. Applications to feedback control 125
   1. Introduction, 125
   2. Feedback holdability of $R^n_+$, 126
   3. Controllability to $R^n_+$, 129
   4. A stabilizability-holdability problem, 132
   5. Notes, 134

8. Controllability, observability, and realizability of positive control systems 137
   1. Introduction, 137
   2. Controllability with nonnegative controls, 137
   3. Observability with conical observation set, 146
   4. Positive realization, 155
   5. Notes, 159
