# Table of Contents

Acknowledgements .......................................................... iv

0. Introduction and summary of major results .......................... v

1. Higher-order linking numbers ........................................... 1

2. Derived links, Derived linkings, and surface systems ............... 4

3. Derived links and the lower central series ........................... 13

5. Calculating Minor's $\bar{\mu}$-invariants using the Geometric Rewrite 23

6. Formal Massey products and Surface systems ........................ 30

7. Antiderivatives and the Realization Theorem .......................... 38

8. The Effect of Bing-Doubling and Band-summing on the $\bar{\mu}$-invariants 46

9. Relations to Cobordism and Orr's invariants .......................... 50

10. Cobordism Classification and Realization ............................ 62

11. Questions and Problems ................................................ 65

Appendix A: Finding Seifert surfaces for links ........................... 68

Appendix B: Table of the invariant $n$-linkings and their corresponding $\bar{\mu}$-invariants ........................................ 70

References ................................................................. 72
