Contents

Introduction

1 Elementary properties of single-variable polynomials
   1.1 Number of roots of a polynomial
   1.2 Some bounds on the roots
   1.3 Separation of roots
   1.4 Resultants and discriminants
   1.5 Continuity of roots
   1.6 Analyticity of simple roots and Thom’s lemma
   1.7 Liouville functions
   1.8 Thom’s lemma and Liouville extensions

2 Semi-algebraic sets
   2.1 Definitions and first examples
   2.2 The first main structure theorem
   2.3 Applications of the first main structure theorem
   2.4 The second main structure theorem
   2.5 Applications of the second main structure theorem
   2.6 Cell decomposition and triangulation of semi-algebraic sets
   2.7 Local triviality of semi-algebraic maps
   2.8 Applications of the local triviality theorem
   2.9 A rough quantitative approach to the finiteness theorem

3 Real algebraic sets
   3.1 Basic definitions and first properties
   3.2 Regular points
   3.3 Complexification
   3.4 Dimension
   3.5 Some examples involving $V, R(V), S(V)$
   3.6 Remarkable examples of real algebraic sets and regular maps
   3.7 Blowing up: gluing via regular maps
   3.8 Neighbourhoods of algebraic sets
   3.9 (Milnor-Thom) Bounds for the topology of algebraic sets
   3.10 Local topological properties of real algebraic sets
### 4 Complexity
- Introduction .......................... 183
- 4.1 Hovansky's theorem .................. 184
- 4.2 Additive complexity of polynomials 194
- 4.3 Additive complexity of polynomials in several variables 200
- 4.4 Estimation of the number of connected components of a semi-agebraic set 206
- 4.5 Complexities ......................... 211
- 4.6 Some complements ................... 214

### 5 Curves and surfaces in the projective space
- Introduction .......................... 231
- 5.1 Topology of the real projective space 232
- 5.2 The topology of complex curves ........ 238
- 5.3 Plane curves: maximal curves ........ 245
- 5.4 Plane curves: other properties ......... 260
- 5.5 Some complements: Applications of blowing up and Brusotti's theorem 264
- 5.6 Surfaces of degree 3 in $\mathbb{R}P^3$ .................. 275
- 5.7 Further results on the topology of smooth algebraic varieties in $\mathbb{R}P^n$ 284

### A Effective calculation of subresultants
- A.1 Subresultants and sub-GCDS ........ 291
- A.2 Subresultants and Euclid's algorithm 296

### B Bezout's theorem
- .................. 299

### C Smith's theory
- .......................... 303

### D On the piano-Mover's problem
- D.1 Introduction ....................... 307
- D.2 The piano-mover's problem .......... 308
- D.3 Germs of plane curves ............... 311
- D.4 Families of curves .................. 317
- D.5 Applications to polynomials ......... 320
- D.6 Applications to the piano-mover's problem 326

### Index
- .......................... 333

### Bibliography
- .......................... 336
