Notation	xi
CHAPTER ONE	1
INTRODUCTION	
CHAPTER TWO	5
A SELECTIVE LITERATURE SURVEY	
2.1 Introduction	5
2.2 The predecessors of the models in this thesis	6
2.3 Optimal behaviour of a firm facing a business cycle	9
2.3.1 An explicit business cycle	9
2.3.2 An implicit business cycle	12
2.4 Optimal behaviour of a firm facing technological progress	13
2.5 Summary	17
CHAPTER THREE	19
ON DYNAMIC OPTIMISATION MODELS OF THE FIRM AS A BRANCH OF 'PURE THEORY' AND ON THE USE OF MATHEMATICS	
3.1 Introduction	19
3.2 Theoretical dynamic optimisation models of the firm: a branch of 'pure theory'	19
3.2.1 Pure theory	19
3.2.2 An illustration	20
3.3 Some guidelines for the use of mathematics	23
3.3.1 Introduction	23
3.3.2 On the role of mathematics in economics	24
3.3.3 The status of assumptions	25
3.3.4 On the mathematical translation of economic assumptions and the interpretation of mathematical tools	27
3.4 Summary and conclusions	30
CHAPTER FOUR	33
THE BASIC MODEL	
4.1 Introduction	33

4.2	The model and its assumptions	34
4.3	Necessary and sufficient conditions for optimality	38
4.4	A feedback decision rule	43
4.5	Illustrations of the decision rule	47
4.6	Limitations of the decision rule	51
4.7	Book value and market value	53
4.8	Summary and conclusions	53

## CHAPTER FIVE

### A MODEL WITH A BUSINESS CYCLE

5.1	Introduction	57
5.2	The model and the optimality conditions	59
5.2.1	The model	59
5.2.2	The conditions for optimality	63
5.3	The optimal solution in case $i < (1-f)r$	63
5.3.1	Introduction	63
5.3.2	A 'light' recession ( $g < m \leq g^* + a$ )	64
5.3.3	A 'moderate' recession ( $g + a < m \leq m^*$ )	65
5.3.4	A 'severe' recession ( $m^* < m \leq m^{**}$ )	71
5.3.5	A fatal recession	76
5.4	The optimal solution in case $i > (1-f)r$	76
5.4.1	Introduction	76
5.4.2	A 'light' recession ( $g < m \leq g^* + a$ )	77
5.4.3	A 'moderate' recession ( $g + a < m \leq m^*$ )	78
5.4.4	A 'severe' recession ( $m^* < m \leq m^{**}$ )	84
5.4.5	A fatal recession	85
5.5	Summary and conclusions	85

## CHAPTER SIX

### SHADOW PRICES IN A MODEL WITH PURE STATE CONSTRAINTS

6.1	Introduction	81
6.2	The model	84
6.3	A shadow price interpretation for $v$	88
6.4	Interpretation of the costate variables	94
6.5	Why and when does a costate jump?	95
6.6	Some general guidelines for the interpretation of costates	94
6.7	Summary and conclusions	98

<b>CHAPTER SEVEN</b>	97
<b>TECHNOLOGICAL PROGRESS IN VINTAGE MODELS OF THE FIRM: SCRAPPING CONDITION AND STEADY STATE</b>	
7.1 Introduction	97
7.2 The model and the optimality conditions	99
7.2.1 The vintage structure and the role of taxes	99
7.2.2 The model	101
7.2.3 Some properties of $N(t)$	102
7.2.4 The optimisation problem	103
7.2.5 The optimality conditions	104
7.3 The scrapping condition	106
7.3.1 A general scrapping condition	106
7.3.2 Comparison with other scrapping rules	109
7.3.3 Interpretation of the scrapping condition in the general model	110
7.3.4 Another way to derive the scrapping condition?	112
7.4 A steady state solution	113
7.4.1 Existence of a steady state solution	113
7.4.2 Is the steady state identical to the final path?	117
7.5 Summary and conclusions	120
<b>CHAPTER EIGHT</b>	121
<b>OPTIMAL POLICIES IN MODELS WITH TECHNOLOGICAL PROGRESS, WITH AND WITHOUT A BUSINESS CYCLE</b>	
8.1 Introduction	121
8.2 The optimal solution for the simplified model of Chapter 7	121
8.2.1 Limitations of the coupling procedure	121
8.2.2 The optimal policy	124
8.2.3 A decision rule?	127
8.3 The optimal solution for the general model	129
8.4 Technological progress and a business cycle in one model	133
8.4.1 Introduction	133
8.4.2 When does the steady state solution violate $I \geq 0$ ?	133
8.4.3 The business cycle in the simplified model	136
8.5 Summary and conclusions	140
<b>CHAPTER NINE</b>	141
<b>SUMMARY AND CONCLUSIONS</b>	

<b>APPENDIX ONE</b>	147
<b>OPTIMALITY CONDITIONS FOR THE BASIC MODEL     OF CHAPTER 4</b>	
A1.1 Necessary and sufficient conditions	147
A1.2 The coupling procedure	152
A1.2.1 The paths	152
A1.2.2 Derivation of the final paths	155
A1.2.3 The coupling procedure	156
<b>APPENDIX TWO</b>	159
<b>THE MATHEMATICAL DETAILS OF CHAPTER 5</b>	
A2.1 General remarks	159
A2.2 The details of section 5.3.3	161
A2.3 The details of section 5.3.4	163
A2.4 The details of section 5.3.5	168
A2.5 Uniqueness of the solution	169
A2.6 Numerical illustrations	170
A2.7 The details of section 5.4	172
<b>APPENDIX THREE</b>	179
<b>ON THE SHADOW PRICE INTERPRETATION OF THE     MULTIPLIERS OF PURE STATE CONSTRAINTS IN     OPTIMAL CONTROL PROBLEMS</b>	
A3.1 Introduction	179
A3.2 The class of models to be considered	179
A3.3 An outline of the proof	180
A3.4 A general sensitivity result	180
A3.5 Problem II written as a problem P <sub>a</sub>	181
A3.6 The Kuhn-Tucker conditions and Theorem 1 for problem II	182
A3.7 The shadow price interpretation of $v$	185
<b>APPENDIX FOUR</b>	187
<b>NECESSARY AND SUFFICIENT CONDITIONS FOR AN     OPTIMAL CONTROL PROBLEM WITH AN ENDOGENEOUSLY     DETERMINED 'LAG-STRUCTURE'</b>	
A4.1 Introduction	187
A4.2 The model	187

A4.3	The tric	188
A4.4	Derivation of the necessary conditions for optimality for a special case	190
A4.5	Sufficient conditions for the general model	196
APPENDIX FIVE		205
VARIOUS DERIVATIONS		
A5.1	The details of section 7.4	205
A5.1.1	Existence of a steady state solution in section 7.4.1	205
A5.1.2	Derivation of equation (7.57)	206
A5.1.3	Convergence of the upper and lower bounds on M and T	207
A5.2	The optimal policy of section 8.2.2	210
A5.3	The pattern of investments in section 8.4.2	215
A5.4	Discussion of 'zero investment'-periods	219
