List of Principles and Strategies x
Preface xiii

Chapter 1 The First Law of Manufacturing Control 1

Summary, 1
Can Manufacturing Be Controlled?, 2
Complexity Exaggerated, 6
The Essence of Manufacturing, 6
Material Flow, 9
Information Flow, 10
Planning and Control Systems, 12
Improving Flexibility, 13
Theory and Practice, 15

Chapter 2 Evolution, Facts and Fables 21

Summary, 21
Decline of U.S. Manufacturing, 22
Contents

Governmental Handicaps, 23
Union Handicaps, 24  Financial Institution Handicaps, 24  Trade Relations, 25
Poor Management, 25
Wealth Generation and Sharing, 26
The Evolution of Planning and Control, 28
Inventory Fallacies and Truths, 32
  The Paradox of Inventory Control, 33
  The Lead Time Syndrome, 34
The Situation Today, 36

Chapter 3  Manufacturing as a Process

Summary, 39
Manufacturing Is a Process, 40
Objectives of Manufacturing, 40
  Satisfy Customers Completely, 40
  Earn Adequate Profits, 42  Use Capital Effectively, 42  Generate More Wealth, 43
  Reward Participants Equitably, 43
  Treat Suppliers and Customers Fairly, 43
  Be a Good Citizen, 44
Differences Are Evident, 44
Useful Classifications, 46
Common Characteristics, 46
Information Flow Requirements, 48
Material Flow Requirements, 49
Attacks on Waste, 50

Chapter 4  Strategic Planning

Summary, 53
The Planning Hierarchy, 54
Strategic Planning, 57
  Useful Strategies for Design Engineering, 60
  Common Marketing Strategies, 61
  Strategies Applicable to Production, 61
  Strategies in Finance, 62
Business Planning, 63
Production Planning, 64
The Production Plan and Master Production Schedule Links, 67
Master Production Schedules, 68
Chapter 5  The System and Its Role

Summary, 73
General Control Theory, 74
System Objectives, 76
Core System Elements, 77
Subsystems, 82
Requirements for Effective Systems, 85

Chapter 6  Effective Execution and Control

Summary, 87
Requirements for Control, 88
Valid Plans, 89  Timely Feedback, 90
Preset Tolerances, 91  Exception Reports, 91
Thorough Review, 91  Prompt Action, 91
Improving Internal Control, 92
Cultural Changes Needed, 96
Top Management, 98  Finance and Accounting, 99  Marketing and Sales, 101
Warehousing and Distribution, 102
Design Engineering, 103  Manufacturing Engineering, 105  Material Planning and Control, 106  Quality Control, 108
Production, 109  Purchasing, 112
Maintenance and Plant Engineering, 113
The Changing Roles of Staff "Experts," 113

Chapter 7  Measures of Performance

Summary, 117
The Need to Challenge Tradition, 118
Satisfying Customers, 119  Reducing Costs, 120
Reductions in Capital Requirements, 122
Decision Making with the Wrong Numbers, 122
Direct Labor Efficiency, 122  Direct Material Costs, 124  Book Value of Machinery, 125
Return on Investment, 126
Requirements for Effective Measurement, 126
Physical Versus Financial Data, 128
The Hierarchy of Performance Measurement, 129
Financial Measures of Performance, 131
Inventory Turnover Rates, 131  Return on Capital Employed, 133  Aggregate Production-Sales-Inventory, 133  Product Profit Margins, 135  Productivity, 137
Physical measures of Performance, 138
Time Periods of Supply, 138  Actual Versus Scheduled Output, 138  The Production/Delivery Ratio, 139  Number of Defects in Materials, Products, and Data, 139  Percent of Records with No Significant Errors, 139  Manufacturing Cycle Times, 140  Percent of Real Work in Cycle Times, 141  Productivity, 142  Number of Certified Suppliers, 143  Number of Components in Each Product, 143  Number of Bottleneck Work Areas, 143  Number of Schedules Missed, 144
Specific Measures for Functions, 144
Essence of Control, 146

Chapter 8  Manufacturing in the Future 149
Summary, 149
The Situation Today, 150
Common Fallacies, 153
U.S. Economy Is Strong, 153
Professional Managers Are Unprincipled, 153
Urgent Tasks for Executives, 157
Strategies for the Future, 159
Hope for the Future, 165

List of Principles and Strategies

PRINCIPLES

CHAPTER 1

1. Time is the most precious resource., 10
2. The logic of manufacturing planning and control is simple and universal., 11
3. There is one system framework common to all types of manufacturing., 12
4. There is no one best way to control manufacturing., 12
5. Do not commit flexible resources to any specific item until the last possible moment., 13

CHAPTER 2

6. Well-run operations do not require complex systems., 37

CHAPTER 3

7. Manufacturing is a process involving two flows: materials and information., 47
8. No manufacturing problem is unsolvable., 49

CHAPTER 4

9. The validity of a plan increases as its horizon decreases., 72

CHAPTER 5

10. Manufacturing operations forming parts of a common process are controlled best by an integrated system., 76
11. Plans impossible to execute are the worst kind., 80, 98

CHAPTER 6

12. Replanning is the last resort; first get back on plan., 92
13. Making enough in total is a prerequisite of making the right things., 94
14. Improvements can and should be made in all functions simultaneously., 97
15. Learn to play a better game, not just keep a better score., 101
16. Know customers’ real needs, not just their wants., 101
17. Sound design means much more than proper functioning., 104
18. Setting time standards is secondary to smoothing and speeding flow., 106
19. Plan only capacity requirements over long horizons; schedule specific items only in the near future., 107
20. Estimates of group totals for families of items will be more accurate than those of individual items., 107
21. Making anything too soon is a serious waste., 107
22. Input higher than output must trigger instant alerts., 108
23. Planning defines the resources needed to make what is planned; execution applies the resources available to make what customers want now., 111
24. One ace partner beats a full house of competing suppliers., 112

CHAPTER 7

25. “Data” are simply facts; “information” requires facts having useful meanings., 127
26. Ninety-five percent complete information now is far better for control than 100% later., 127
27. The best measures of performance are aggregates, not details., 128
28. Any valid control report must show both planned and actual performance data., 128
29. Physical units of measure are superior to financial., 129
30. Visual feedback is preferable to system data., 129

STRATEGIES

CHAPTER 8

1. Make education of all employees a continuous effort., 159
2. Achieve significant, continuous improvements in the performance of the business by attacking waste in all activities., 161
3. Smooth out and speed up material and information flows., 161
4. Increase the productivity of capital., 162
5. Work continuously to improve the quality of output of every business activity., 162
6. Do not commit flexible resources to any specific item until the last possible moment., 164
7. Streamline factory processes to slash inventories, material costs, and production time., 164
8. Pare management layers to force designers, engineers, production workers, and marketers to work as teams., 164
9. Harness computer technology to make small batches of customized products at low costs., 164
10. Pounce on breakthrough discoveries (like superconductivity) that will revolutionize entire businesses., 164
