

CONTENTS

Introduction	vii
--------------------	-----

Part I. METHODS AND PROCEDURES OF CONDUCTING RESEARCH

The Literature Review

1. The Traditional (Nonquantitative) Literature Review	1
2. Meta-analysis (Quantitative Literature Reviews) ...	9

Research Design

3. Experimental Design	21
4. Quasi-experimental Design	62
5. Threats to the External Validity of Research	93
6. Other Threats to the Internal and External Validity of Research	106
7. Statistical Power	120
8. Sampling	165
9. Techniques for Assigning Subjects to Groups	174
10. Constructing and Monitoring Independent Variables	186
11. Methods of Improving Response Rate (and Reducing Attrition)	191

Specific Types of Research

12. Survey Research	210
13. Research Involving Single Subjects	224
14. Longitudinal Research	232
15. Multicenter Research Issues	239
16. Secondary Analysis	244
17. Qualitative Research Methods	255

Issues Related to Conducting Research

18. Evaluating the Quality of Empirical Research	265
19. Deliberate Fraud and Misconduct	276
20. General Policy Issues (including Increasing Productivity/Utility)	285
21. Philosophy of Science Issues for Practicing Researchers	310
22. Issues Related to Informed Consent and Research Ethics	320
23. The Research Publication System (including Abuses Thereof)	341
24. Grantsmanship	360

Part II. PSYCHOMETRICS

Theory

1. Classic Measurement Theory	367
2. Item Response Theory	374
3. Criterion-Referenced Measurement (including Issues Related to Standard Setting and Classification)	379

Reliability Theory

4. Internal Consistency and Stability Across Time	389
5. Interrater Reliability (including Generalizability Theory)	396
6. Other Sources of Measurement Error (including Response Sets and Acquiescence)	434

Validity

7. Content Validity	442
8. Construct Validity	446
9. Criterion-Related Validity	455
10. Differential Validity/Test Bias	465
11. Alternative Validity Concepts	471

Issues Related to the Selection and Construction of Instruments

12. Sources of Existing Instruments	475
13. Instrument Construction (including Scaling Issues)	487
14. Methods of Scoring and Weighting	516
15. Test-Wiseness	519
16. Issues Surrounding the Use of Difference Scores ..	521

Issues Surrounding the Use of Specific Types of Instruments

17. Self-Reports	530
18. The Use of Informants	540
19. The Use of Existing Records	543
20. Consensus Techniques	549
21. Unobtrusive Measures	552
22. The Randomized Response Technique	554
23. Cost-Effectiveness/Cost-Benefit Assessment	558
24. Diagnostic/Screening Tests	562

Part III. STATISTICAL ANALYSIS

Overview

1. General Analytic Issues	585
2. Levels of Measurement and the Selection of Statistical Procedures	606
3. Issues Surrounding Statistical Significance	619
4. Quality Control of Research Data	650

Univariate Procedures

5. Analysis of Variance	658
6. Analysis of Covariance and the Issue of Statistical Control	680
7. Multiple Regression	688
8. Logistic Regression/Probit Analysis	706
9. Ridge Regression	711

10. Time Series and Other Longitudinal Procedures . . .	713
11. Contingency Table Analysis (including Log-Linear Techniques)	722
12. Nonparametric Procedures	728

Causal Modeling

13. General Issues in Causal Modeling	736
14. Cross-Lagged Panel Correlation and Related Techniques	742
15. Path Analysis	744
16. LISREL and Structural Equation Models	748

Multivariate Procedures

17. Multivariate Analysis of Variance (MANOVA)	753
18. Discriminant Analysis	757
19. Factor Analysis	763
20. Cluster Analysis	781
21. Multidimensional Scaling	787
22. Canonical Correlation	791

Specific Data Analysis Issues

23. Survival Analysis/Censored Data	796
24. The Analysis of Aggregated Data	799
25. Missing Data	803
26. The Use of Multiple Comparisons	809
27. Issues Surrounding Sequential Design, Multiple Looks and Study Termination	815
28. Outliers, Regression Diagnostics, Robust Procedures, and Related Issues	827
29. Bayesian Statistics/Decision Theory	840
30. The Analysis of Rates, Proportions, and Risks	845
Author Index	853
Subject Index	889
