# Table of Contents

**Preface** ix

**Chapter I  Markov Processes** 1

0. Introduction 1
1. Basic terminology 2
2. Stationary transition functions 4
3. Time homogeneous Markov processes 6
4. The strong Markov property 15
5. Hitting times 19
6. Standard processes 25
7. Killed and stopped processes 29
8. Canonical realizations 33
9. Potential operators and resolvents 35

**Chapter II  Examples** 38

1. Examples 38
   (a) Processes with stationary independent increments 38
   (b) Transformations 39
   (c) Diffusion processes 41
   (d) Special processes 42
   (e) Linking 42

2. Brownian motion 44
   (a) Existence 44
   (b) Conditional probabilities 45

3. Feller Brownian motions and related examples 49
   (a) Sawtooth processes 49
   (b) Local time 52
   (c) Feller Brownian motions 55
# Table of Contents

## Chapter III  Point Processes of Excursions  

1. Additive processes  
2. Poisson point processes  
3. Poisson point processes of excursions  
   (a) Additive functionals  
   (b) Excessive functions  
   (c) Local time  
   (d) Point processes of excursions  
   (e) The characteristic measure  
   (f) Markov properties of the excursion measure  
   (g) The non-recurrent case  

## Chapter IV  Brownian Excursion  

1. Brownian excursion  
2. Path decomposition  
3. The non-recurrent case  
4. Feller Brownian motions  
5. Reflecting Brownian motion  

## Chapter V  Itô’s Synthesis Theorem  

1. Introduction  
2. Construction  
   (a) Approximating processes  
   (b) Entrance laws  
   (c) Resolvents  
   (d) Markov processes  
3. Examples and complements  
   (a) Feller Brownian motions  
   (b) Skew Brownian motion  
   (c) Skew product diffusions  
4. Existence and uniqueness  
5. A counter-example  
6. Integral representation  

## Chapter VI  Excursions and Local Time  

1. Introduction
2. Ray's local time theorem 183
   (a) Excursions and local time 183
   (b) Some local time formulas 186
   (c) Ray's theorem 190
3. Trotter's theorem 196
   (a) Occupation time density 196
   (b) Excursion local time 197
   (c) The excursion filtration 199
4. Super Brownian motion 204

Chapter VII  Excursions Away From a Set 220

1. Introduction 220
2. Additive functionals and Lévy systems 222
   (a) Potentials 222
   (b) Local time and time changes 224
   (c) Absolute continuity 225
   (d) Lévy systems 227
3. Exit systems 231
   (a) The kernel \( \hat{P} \) 231
   (b) Markov properties 234
   (c) The excursion data 237
4. Motoo Theory 241
   (a) The boundary system 242
   (b) Feller Brownian motions in the upper half plane 246
   (c) Uniqueness 249
   (d) Additive functional formulas 252
   (e) Construction 257
