CONTENTS

Foreword ................................................................. ix
Preface ........................................................................ xi
Color plates following page 138
Problems and phenomenology in two-dimensional turbulence .......... 1
   G.K. Vallis
Spectra of tracer distributions: A geometric approach .................... 27
   R.T. Pierrehumbert
The dynamics associated with the chaotic tangles of two dimensional
quasiperiodic vector fields: Theory and applications ..................... 47
   Darin Beigie, Anthony Leonard and Stephen Wiggins
Infinitely conducting dynamos and other horrible eigenproblems ........ 139
   B. J. Bayly
A note on recent experiments with Rossby waves on eastward jets ....... 177
   L.M. Polvani and Jihad Touma
Arnol’d stability applied to fluid flow: Successes and failures ........... 187
   Theodore G. Shepherd
The search for simplified models of two-dimensional,
structured turbulence ................................................... 207
   James C. McWilliams and Jeffrey B. Weiss
Conformal transforms and dynamics of two-dimensional vortices ...... 221
   Bernard Legras and David G. Dritschel
Breaking internal waves over isolated topography ......................... 239
   W.R. Peltier and J.F. Scinocca
