# Contents

**Introduction** ................................................................. 1

**Life and Death at Work: Three Insights, One Context** ............... 2
  Changing Images of Work Accidents .................................... 2
  A “Near Miss” Accident: The Original Motivation for Sociological Inquiry .......................................................... 2
  The Casting of a Shadow: The Distance between Emergent Sociological and Modern Approaches to Safety .......... 4

**A Case of Socially Produced Error: Industrial Accidents** .......... 4
  Accidents as a Social Problem ......................................... 6
  Relationships between Research Methods and Theory Construction ................................................................. 7

---

**Chapter 1**

**From Sin to Social Peace: The Origins of the Modern Treatments of Industrial Accidents** .......................................................... 13

**The Birth of the Modern Notion of Industrial Accidents** .......... 14
  The Children’s Employment Commission ................................ 14
  The Birth of Safety Engineering: Employers, Workers, and the Davy Lamp ......................................................... 17
  Six Effects of Technically Conceived Safety Instruments ..... 21

**A Turning Point** ................................................................. 22
  The Victory of the Industrial Capitalist Model of Prevention ................................................................................... 22
  Accident Prevention as Political Rationality ......................... 26
  Compensation for Accidents ............................................... 27
Conclusions .............................................................................. 32
  The Management of Safety and Compensation ................. 32
  The Visibility and Invisibility of Accidents ......................... 34

Chapter 2

From Peace to Rupture: Development and Crisis
of Modern Solutions ................................................................. 43

Introduction .............................................................................. 43
  Definition of Lines of Research ............................................ 44
  Institutional Interventions ..................................................... 44

Demand ..................................................................................... 45
  Economic, Political, and Social Demands ......................... 45
  Institutional Responses to Contradictory Demands .......... 46
  The Rupture: A System Response to Contradictory
  Demands .............................................................................. 47
  Interlude: The Shape Taken by Interventions ................... 47

Safety Professions .................................................................... 48
  Safety Engineering: Integrated Tensions ......................... 48
  Industrial Health and Medicine: Toward Scission .......... 54
  Industrial Psychology ........................................................... 56
  Ergonomics .......................................................................... 59

State-Managed Compensation and Prevention .................... 62
  Compensation ...................................................................... 62
  Prevention ......................................................................... 65

Unions and Workers ................................................................. 72
  Why Do Unions Give Low Priority to Safety? ................. 74

The Rupture ............................................................................. 78
  Crossing the Rubicon .......................................................... 79

Chapter 3

A Sociological Theory of Industrial Accidents ..................... 87

Introduction ............................................................................. 88
  Diachronic Analysis ............................................................ 88
  Toward Synchronous Analysis ............................................ 92
  Synchronous Meets Diachronic Analysis ......................... 96

Toward a Sociology of Industrial Accidents ......................... 98
  Outline ............................................................................... 98
Chapter 4

Methods and Research Design ........................................... 161

Explanatory Criteria ....................................................... 161
  Causal and Meaning Adequacy: The Criterion
  for Hypotheses Validation ............................................... 161
  Conclusion: Criteria of Explanation ................................... 168

Research Design .......................................................... 168
  Background Discussion ................................................... 168
  The Criterion of Variable Control ................................... 171
  The Criterion of Variety ................................................. 174
  The Criterion of Adequacy .............................................. 176

Conclusion ........................................................................ 179

Chapter 5

Testing the Sociological Theory ......................................... 183

Introduction ...................................................................... 183
  Sociohistorical Setting ..................................................... 183
  Institutional Interventions ............................................... 184
  Study Design and Methods .............................................. 185
  Using the Sociological Theory ......................................... 187

Hypothesis Testing: Qualitative Research ............................ 191
  The Pipe Plant: Plant C, Compacted Management,
    Rotating Shifts ............................................................ 191
  Extrusion Plant: Plant E, Traditional Management,
    Rotating Shifts .................................................................. 201
Comparison of the Pipe and Extrusion Plants .......................... 208
The Yarn Plant: Plant F, Induced Management,
Fixed Shifts ......................................................... 210
From Qualitative Analysis to Statistical Tests ....................... 217
Introduction ............................................................. 217
Testing Sociological and Conventional Hypotheses
Statistically ............................................................ 218
Final Observations ....................................................... 225

Chapter 6

Readjusting the Prism: Remaking the Modern? ....................... 229

Introduction ............................................................. 229
Weaving an Explanation ................................................ 229
The Standards Approach: An Old School Reborn? ................... 234
Looking Back to the Rupture .......................................... 237
Schools of Accident Prevention: Children of the Rupture ......... 238
Cost-Benefit Analysis ................................................. 238
Systemic Safety ......................................................... 244
The Formation of Contemporary Relationships
between Institutions and Schools ...................................... 246
Compensation .............................................................. 248
The New Zealand Exception ........................................... 250
The United States Modification ....................................... 252
Picking up the Threads: Changing Compensation
in a Wider Context .................................................... 252
The Transition toward a Postindustrial Society ..................... 260
"The Public": A New Social Actor? .................................. 260
Accident Prevention and Systemic Safety ............................ 262
Three Schools of Accident Prevention in Check ...................... 270
Toward a New School .................................................. 271
Readjusting the Prism: Assembling Political Forces
and Intellectual Bases .................................................. 274
Elements of the Political Scene ....................................... 274
A New and Sociological School: A Final Glimpse .................... 284
Political and Intellectual Bases for a New School ................... 286
"The Public": A New Political Actor Steps onto the Stage .......... 286

Afterword ................................................................. 301

Rationalization and Its Offshoots ...................................... 302
From Rationalization and Its Offshoots to Perverse Effects ......... 304
Contents

Toward a Sociological Approach ........................................ 304
    Information, Interests, and Culture ............................... 304
    Toward a Sociology of Medical Error and School Failure .... 306
Toward a Sociological School: Readjusting the Prism .............. 307
Conclusion ........................................................................... 307

Index .................................................................................... 311
