Introduction: the problem as we saw it 1
Jeanne Daly and Ian McDonald

Part I  Issues of policy 13

1  The perspective of the policy maker on health care research and evaluation 15
   David Hailey

2  Cost–utility analyses in health care: present status and future issues 21
   Jeff Richardson

Part II  The randomised controlled trial 45

3  Randomised controlled trials in health care research 47
   David J. Newell

4  The impact of clinical research on clinical practice 62
   Jack Hirsh

5  The clinician and the randomised controlled trial 76
   Michael Jelinek

Part III  Non-experimental quantitative study designs 91

6  Broadening the scope of evaluation: why and how 93
   Christel A. Woodward
| Contents |
|-----------------------------|-----|
| 7 Advantages and limitations of the survey approach: understanding older people | 114 |
| *John B. McKinlay* |
| 8 Comparing alternative methodologies of social research: an overview | 138 |
| *Jake M. Najman with John Morrison, Gail M. Williams and Margaret J. Andersen* |
| **Part IV Qualitative research methods** | 159 |
| 9 'Don’t mind him – he’s from Barcelona': qualitative methods in health studies | 161 |
| *Robert Dingwall* |
| 10 Applying the qualitative method to clinical care | 176 |
| *David Silverman* |
| 11 Why don’t you ask them?: a qualitative research framework for investigating the diagnosis of cardiac normality | 189 |
| *Jeanne Daly, Ian McDonald and Evan Willis* |
| **Part V Conclusion** | 207 |
| 12 Research methods in health care - a summing up | 209 |
| *Ian McDonald and Jeanne Daly* |
| Name index | 217 |
| Subject index | 222 |
Illustrations

FIGURES

1 The ingredients needed to perform clinical research successfully 63
2 Observed parameters of efficacy 64
3 The randomised controlled trial 85
4 Objectivism and subjectivism 181

TABLES

1 Alternative economic analyses for health and health care evaluation 22
2 Some utilities for health states 25
3 Issues in the measurement of utility and CUA 25–30
4 Essential design features for studies evaluating the efficacy of a diagnostic test 64
5 Relative risk reduction 68
6 Components of decline in coronary heart disease 80
7 National estimates of physical limitations and social conditions by age and sex (%) 119
8 Advantages and limitations of three major field approaches 121
9 Advantages and limitations of three major field approaches, given the impairment and attitudes of the oldest old 125
10 The focus of various methods of social research 140
11 Reported illness among male respondents, Denmark, 1952–4 143
12 The association between stress and anxiety estimated using both simultaneous and sequential data collection methods 152
13 The association between stress and anxiety (1) 153
14 The association between stress and anxiety (2) 153
15 Initial elicitation question (random sample) 185
16 Initial elicitation question (Down’s Syndrome cases) 186
17 Cardiologists’ reasons for ordering the test 194
