<i>About the authors</i>	9
<i>Preface</i>	11
<b>1. A new environmental agenda for cities?</b>	<b>15</b>
Introduction	15
A new environmental agenda	21
The structure of the book	27
The scale of urban change	29
<b>2. Environmental problems in the home, workplace and neighbourhood</b>	<b>37</b>
Introduction	37
The indoor environment at home	38
The workplace	49
The neighbourhood environment	51
<b>3. The city environment</b>	<b>63</b>
The range of problems	63
Toxic/hazardous wastes	65
Export of toxic wastes or polluting industries	68
Water pollution	71
Air pollution	76
Natural and human induced hazards	88
Noise pollution	93
Environment and well-being	93
Environmental problems in smaller cities	96
Who bears the environmental costs in Third World cities?	100
<b>4. Cities' rural, regional and global impacts</b>	<b>109</b>
Cities' regional impacts and rural-urban interactions	109
Cities' ecological footprints	120
Cities and the global commons	122
Impacts of global warming on Third World cities	125

## 6 *Environmental Problems in Third World Cities*

<b>5. Addressing environmental problems</b>	<b>129</b>
Tackling environmental health problems	129
Improving water and sanitation	130
A better use of each city's natural resources	132
Solid wastes; reclamation, re-use, recycling and disposal	134
Another role for NGOs	146
Tackling city-wide pollution	151
Air pollution	155
The institutional constraints	159
<b>6. Sustainable development and cities</b>	<b>171</b>
Introduction	171
Sustainable development	172
How a concern for sustainability arose	173
The meaning of 'sustainability'	175
Defining sustainable development	180
Cities and ecological sustainability	182
Links between urban policies and sustainable development	188
Linking global and local sustainability	189
The national framework for city action on sustainable development	191
Enabling local action	194
Implementing sustainable development in cities	195
Agenda 21 and the global context for sustainability and development	197
<b>7. Conclusions</b>	<b>203</b>
Introduction	203
Environmental problems; political solutions	204
Institutional change and the role of aid agencies	207
The role of NGOs and citizen groups	209
A city-specific environmental agenda	211
New professional attitudes	214
City problems within a global perspective	217
<i>Notes and references</i>	<b>221</b>
<i>Bibliography</i>	<b>253</b>
<i>Further reading</i>	<b>275</b>
<i>Index</i>	<b>283</b>

# List of illustrations

## BOXES

1.1: The environmental impact of urban development	18
1.2: The main links between health and the environment	22
2.1: Inadequacies in third world cities' water supply and sanitation	40
2.2: The impact of tuberculosis on health and its association with housing	46
2.3: Examples of environmental hazards for children at work in India	52
2.4: Landslides in Rio de Janeiro and Caracas	55
2.5: Seismic vulnerability in metropolitan Lima	56
2.6: Inadequacies in household garbage collection in nations' largest cities	59
2.7: Some health implications of urban expansion	61
3.1: The North's export of toxic wastes	70
3.2: Water pollution	72
3.3: Examples of water pollution in Third World cities	74
3.4: Examples of air pollution in Third World cities	79
3.5: Factors which influence the public's level of risk from exposure to air pollution	81
3.6: Cubatao	86
3.7: Major natural disasters in third world cities	91
3.8: Water, sanitation and garbage services in small African urban centres	98
3.9: Intra-city differentials in environmental hazards, access to public services and health indicators	103
4.1: Firewood in the cities	110
4.2: Regional impacts of Jakarta	111
4.3: The impact of air pollution on agriculture	117
4.4: The ecological footprint of cities	121

## 8 *Environmental Problems in Third World Cities*

4.5: The impact of sea level rise and other human induced changes on Alexandria, Egypt	126
5.1: Composting and recycling in Triangulo de Peixinhos, Olinda (Brazil)	135
5.2: Household and courtyard farming in urban areas in China	138
5.3: Urban food production in Kenya	140
5.4: The Orangi Pilot Project in Karachi, Pakistan	147
5.5: Different options for government spending US\$20 million on improving housing and living environments	148
5.6: Resource recovery and utilization in Shanghai	155
5.7: Public transport and other environmental initiatives in Curitiba, Brazil	157
6.1: Definitions of sustainability	177
6.2: Agenda 21 – environmental problems in Third World cities and global priorities	199
7.1: A fund for community initiatives	212
7.2: Gender aspects of environmental improvement in cities	215

## FIGURES

6.1: Components of sustainable development	181
--------------------------------------------	-----

## TABLES

1.1: Trends and projections in urban populations by region, 1950–2000	29
1.2: Third World population by region for 1990 and its distribution between rural areas and different size urban centres	32
2.1: Examples of the main water-related infections with estimates of morbidity, mortality and population at risk	39
2.2: Differentials in the cost of water (ratio of price charged by water vendors to prices charged by the public utility)	43
3.1: Examples of toxic chemicals, their use and their potential health impacts	66
3.2: Some urban pollutants and their effects on health	77
5.1: Government–community partnerships in addressing health risks	165
5.2: Proportion of multilateral agencies' total commitments to environmental health-related projects 1980–1989	165
7.1: The most important aid project characteristics from two different viewpoints	208
