Preface xi

Acknowledgments xiv

List of Case-Studies xv

1 Introduction 1
   1.1 Total quality management: a new culture 1
   1.2 The TQM axioms 4
   1.3 Consequences of total quality 10
   1.4 Costs of total quality 11
   1.5 Valuable tools for quality 12
   1.6 The Japanese factor 19

PART I: Management Tools for Quality 23

2 The Deming Approach to Management 26
   2.1 Historical background 27
   2.2 Deming’s fourteen points for management 29
   2.3 Deadly sins and diseases 46
   2.4 Implementing the Deming philosophy 49
   2.5 Deming on management 57

3 Juran on Quality 62
   3.1 Developing a habit of quality 64
   3.2 Juran’s quality trilogy 64
   3.3 The universal breakthrough sequence 66
   3.4 Juran vs. Deming 77
4 Crosby and the Quality Treatment 80
   4.1 Crosby’s diagnosis of a troubled company 80
   4.2 Crosby’s quality vaccine 82
   4.3 Crosby’s absolutes for quality management 83
   4.4 Crosby’s fourteen steps for quality improvement 85

5 Imai’s Kaizen 90
   5.1 The concept 90
   5.2 Kaizen and innovation 91
   5.3 The kaizen management practices 94
   5.4 Kaizen and Deming 101

Sources of Further Information (Part I) 102

PART II: Technical Tools for Quality: Techniques for General Use 105

6 Basic Techniques for Statistical Analysis 107
   6.1 Introduction 107
   6.2 Measures of central tendency and dispersion 109
   6.3 Confidence intervals 111
   6.4 Hypothesis testing 116
   6.5 Frequency distributions and histograms 124
   6.6 Probability distributions 127
   6.7 Measuring linear association 135

7 Design and Analysis of Experiments 154
   7.1 Introduction 154
   7.2 Factorial experiments 158
   7.3 Aliasing 162
   7.4 Constructing fractional designs 164
   7.5 Analysis of variance 174

8 Supporting the Quality Improvement Process 189
   8.1 Affinity diagram 189
   8.2 Bar chart 191
   8.3 Block diagram 193
   8.4 Brainstorming 194
   8.5 Cause and effect analysis 194
   8.6 Control charts 196
   8.7 Cost–benefit analysis 196
   8.8 Customer–supplier relationship checklist 197
12 Taguchi’s Recommended Analysis Techniques 341
  12.1 Net variation and contribution ratio 341
  12.2 Estimation of process performance 343
  12.3 Effective number of replications 344
  12.4 Discount (β) coefficients 345
  12.5 Accumulating analysis 347

13 Performance Measures 353
  13.1 Introduction 353
  13.2 Ensuring simplicity of the model structure 354
  13.3 Avoiding a mean-variance dependence 355
  13.4 Choosing the noise performance measure 356
  13.5 On Taguchi’s recommended measures 359
  13.6 An illustration of Taguchi’s techniques 362

14 Taguchi’s Non-Standard Techniques 372
  14.1 Introduction 372
  14.2 Minute analysis and life testing 374
  14.3 A conventional Taguchi analysis 381
  14.4 A perspective 382
  14.5 Taguchi’s tolerance design 383
  14.6 Tolerance (re-)design 388
  14.7 Conclusion 390

15 Alternative Techniques for Off-Line Quality Control 391
  15.1 Shainin’s approach to experimentation 391
  15.2 Evolutionary operation 399

Sources of Further Information (Part IV) 401

Appendix A Statistical Tables 403

Appendix B Generating Vectors and Blocks for Plackett and Burman Designs 413

Appendix C Taguchi’s Recommended Designs and Interaction Matrices 416

Appendix D Charts and Graph Sheets 429

Index 439
8.9 Decision analysis 198
8.10 Flow charts 200
8.11 Force field analysis 202
8.12 Line graphs/run charts 204
8.13 Pareto analysis 206
8.14 Quality costing 207
8.15 Quality function deployment (QFD) 210
8.16 Quality project approach and the problem-solving process 213
8.17 Risk analysis 214
8.18 Scatter diagrams 216
8.19 Weibull analysis 216

Sources of Further Information (Part II) 225

PART III: Technical Tools for Quality: Techniques for On-Line Quality Control 227

9 Statistical Process Control 229
  9.1 Introduction 229
  9.2 Data collection plan 232
  9.3 Variables charts 233
  9.4 Attribute charts 250
  9.5 Interpreting the control charts 266

10 Complements and Alternatives to SPC 271
  10.1 CUSUM charts 271
  10.2 Charts for drifting processes 280
  10.3 Multi-vari charts 280
  10.4 Alternatives to SPC 283

Sources of Further Information (Part III) 293

11 Taguchi’s Approach to Experimental Design and Off-Line Quality Control 297
  11.1 Introduction 297
  11.2 Background to the method 298
  11.3 Taguchi’s recommended design techniques 309
  11.4 From Deming to Taguchi and vice versa 337
