Contents

1. What is Human-Intelligence-Based Manufacturing?  
   Y. Ito ................................................................. 1

2. Design Principles of Work Organization and Skilled Labour in a Computer-Integrated Manufacturing Environment  
   H. Hirsch-Kreinsen, C. Köhler, M. Moldaschl and R. Schultz-Wild  ........................................... 29

3. Human-Centred Flexible Manufacturing Systems in Machining and Assembly  
   N. Mårtensson, L. Mårtensson and J. Stahre ................. 67

4. Unskilled Worker-Oriented Manufacturing  
   J. Iimura ............................................................... 83

5. Flexible Computer-Integrated Manufacturing Structure of Global Network Type – Case Study in EC Countries  
   G. Spur and F. Zurlino ............................................ 109

6. Flexible Computer-Integrated Manufacturing Structure of Global Network Type – Case Study in Japan  
   T. Itoh ................................................................. 133

7. Anthropocentric Intelligence-Based Manufacturing  
   T. Ihara ............................................................... 151

8. Culture and Success in Manufacturing: a Comparison of Japan and the USA  
   M.J. Kolar ........................................................... 171

9. Culture of Manufacturing – a Case Study: Approaching an Understanding of Different Production Styles in Japan, the USA and Germany

E. Moritz ................................................. 197

Subject Index .................................................. 225
