Contents

1 Introductory background 1
1.1 Assumptions and definitions 2
  1.1.1 Basic properties of functions of a real variable 2
  1.1.2 Basic linear algebra 4
  1.1.3 Basic assumptions about Sturm–Liouville problems 4
1.2 Where Sturm–Liouville problems come from 6
  1.2.1 A simple physical example 6
  1.2.2 Further examples of Sturm–Liouville problems 12
1.3 Summary 18

2 Elementary theory of the classical SLP 19
2.1 Existence, uniqueness, linearity 19
2.2 Self-adjointness 21
2.3 Comparison, perturbation and conditioning theorems 26
2.4 Dependence on parameters 28
  2.4.1 Parameters in the coefficient functions 28
  2.4.2 Dependence on the BCs and endpoints 30
2.5 Standard transformations 33
  2.5.1 Transformation to SLDE with same eigenvalues 33
  2.5.2 Transformation to SLDE with related eigenvalues 34
  2.5.3 Reduction of SLDE to nonlinear first-order equation 35
2.6 Qualitative behaviour of Sturm–Liouville problems 40
  2.6.1 The JWKB approximation 40
  2.6.2 Amplitude 42
  2.6.3 Estimating eigenvalues I 42
  2.6.4 Estimating eigenvalues II 43
  2.6.5 Estimating eigenvalues III 45
2.7 Summary 51

## Contents

### 6 Pruess methods
- 6.1 Convergence theory
  - 6.1.1 Basic convergence results
  - 6.1.2 Using extrapolation
- 6.2 Advantages of Pruess methods
- 6.3 Numerical methods for the approximating problem
  - 6.3.1 Advancing a step
  - 6.3.2 Normalizing the solution
  - 6.3.3 Error estimation and mesh selection
- 6.4 Summary

### 7 Singular SLPs: theory
- 7.1 Singular problems
  - 7.1.1 Admissible functions
  - 7.1.2 The spectrum
  - 7.1.3 Classifying the spectrum
- 7.2 Classification of singular endpoints
  - 7.2.1 Limit-point and limit-circle endpoints
  - 7.2.2 Form of boundary conditions for limit-circle problems
  - 7.2.3 Oscillatory and nonoscillatory behaviour
- 7.3 Subdominance and the Friedrichs extension
  - 7.3.1 Large and small solutions at an endpoint
  - 7.3.2 LP case: genuine and pseudo-eigenfunctions
  - 7.3.3 LC case: the Friedrichs extension
- 7.4 Convergence of truncated eigenvalue estimates
  - 7.4.1 Theorems about convergence
  - 7.4.2 Estimating the rate of convergence
- 7.5 Summary

### 8 Singular SLPs: numerical treatment
- 8.1 Methods implemented in current software
- 8.2 The Fulton–Pruess endpoint classification algorithm
- 8.3 About the numerical experiments
- 8.4 Comparisons of numerics with theory
  - 8.4.1 Test: convergence using truncated BC $u = 0$
  - 8.4.2 Test: non-Friedrichs boundary conditions
- 8.5 Tests of heuristics and performance
  - 8.5.1 Choice of truncated interval
  - 8.5.2 Infinite wells
