Preface x

Contributors xi

1 Introduction - Living the Lifecycle: Social processes in software and systems development
P. Quintas 1
1.1 Why look at the social dimensions of systems and software development? 2
1.2 The singular characteristics of software development 4
1.3 Social perspectives on systems development 9
1.4 Book synopsis 12

2 The Information Technology Field: An historical analysis
A. L. Friedman 18
2.1 The information technology field 18
2.2 History of information technology field 20
   2.2.1 Phase one: hardware constraints 22
   2.2.2 Phase two: Software productivity constraints 22
2.3 Current picture of the IT field 25
   2.3.1 Phase three: user relations constraints 25
2.4 The future and the IT field: phase four? 28
2.5 The IT field and technological change 29
2.6 Fields, paradigms and regimes. 30
3 Managing the Social-Technical Divide: Some aspects of the discursive structure of information systems development
J. Low and S. Woolgar
3.1 Introduction 34
3.2 Discourse analytic approaches to the social-technical divide 36
3.3 Looking for the technical
   3.3.1 Joining the team - a social study of the technical? 39
   3.3.2 Technical boredom and routine: how can I challenge this army? 41
   3.3.3 Technical talk as boundary work 42
   3.3.4 Controlling change: how to traverse the boundary 44
3.4 Amongst the technical architects 47
   3.4.1 Chasing the most technical 47
   3.4.2 Technical dreaming: the future in the present 49
   3.4.3 Complete unintelligibility: technical as a foreign language 50
3.5 Producing the technical: creating private space in time 52
3.6 Conclusions 54

4 Social Dimensions of Software Engineering: The experience of the UK Alvey programme
P. Quintas
4.1 Introduction 60
4.2 Origins of Alvey 64
4.3 The Alvey programme 66
4.4 Development of the software engineering strategy 68
4.5 Alvey software engineering outcomes 69
4.6 Characterizing the divide 73
4.7 Concluding discussion 79

5 Negotiating the Take-up of Formal Methods
S. Harding and G. N. Gilbert
5.1 Introduction 88
5.2 Transferring formal methods technology 89
5.3 Two case studies: project X and project Y 91
5.4 The standard explanations for lack of take-up of formal methods 95
   5.4.1 Lack of skills and training in mathematics 95
   5.4.2 Lack of production quality support tools 97
   5.4.3 Lack of demand from customers 98
   5.4.4 Ignorance of the range and applicability of formal specification techniques 99
   5.4.5 Organizational inertia and management resistance to change 100
5.5 The micro-politics of implementation 102
5.6 Conclusions 107
6 The Evolution of Def Stan 00-55: A socio-history of a design standard for safety-critical software
M. Tierney
6.1 Introduction
6.2 00-55 as a document about software engineering
6.3 The impetus for Def Stan 00-55 and 00-56
6.4 Setting 00-55 and 00-56 in motion
6.5 Reactions to draft 00-55
6.6 The MoD's response to criticism of 00-55 and the re-writing of 00-55 and 00-56 as interim standards
6.7 Some conclusions: the effect of 00-55 on formal methods software engineering in the UK

7 Negotiation and the Role of the Requirements Specification
S. Easterbrook
7.1 Introduction
7.2 The role of specifications
  7.2.1 Construction specifications
  7.2.2 Validating specifications
  7.2.3 Design capture and rationale
  7.2.4 Exploration and replay
7.3 Difficulties
  7.3.1 Requirements formulation
  7.3.2 Nature of the knowledge sources
  7.3.3 Nature of the knowledge involved
  7.3.4 Negotiation
  7.3.5 Uncertainty
7.4 Conflict resolution
  7.4.1 Sources of conflict
  7.4.2 Consequences of suppressing conflict
  7.4.3 Role of communication
7.5 Framework
  7.5.1 Framework
  7.5.2 Support environment
  7.5.3 Tools
7.6 Summary
7.7 Conclusion
8  The Communications Problem in Information Systems Development: Towards a relational approach
F. Murray and H. Willmott
8.1 Introduction
8.2 The model office: a case study
  8.2.1 Background
  8.2.2 Accounts of the MO
  8.2.3 Discussion
8.3 Modelling the model office
  8.3.1 A 'systems' view
  8.3.2 A 'hermeneutical' view
  8.3.3 A 'critical' view
8.4 Beyond the polarizing of paradigms in systems development
8.5 Towards a relational approach
8.6 Applying the relational approach
8.7 Conclusion

9  Mismatch and Tension: Standard packages and non-standard users
J. Webster and R. Williams
9.1 Introduction
9.2 CAPM - fix or flux?
  9.2.1 McKnight, the furniture manufacturer
  9.2.2 BEC, the engineering company
  9.2.3 Shore & Co., the dairy manufacturer
9.3 Images of the technical fix - the role of CAPM vendors and the industrial policy community
9.4 Images of manufacturing and the design of CAPM
9.5 Manufacturing automation policy - an alternative perspective
  9.5.1 The supplier-user relationship
  9.5.2 Technology and industrial policy

10 Systems Development - The Fourth Dimension: Perspectives on the social organization of work
D. Randall, J. Hughes and D. Shapiro
10.1 Introduction
10.2 Methods of sociotechnical inquiry
10.3 Interdisciplinary work
10.4 Evaluation
10.5 Conclusion
11 User Participation in Design - What it can deliver, what it can't and what this means for management
M. Hales 215
11.1 Introduction 215
11.2 Practices rather than apparatuses as the objects of design 217
11.3 The full cycle of design 220
11.4 An architecture for designing use practices - the ISU design model 222
11.5 A case study - success and failure in participative design 225
11.6 An evaluation of the project 228
11.7 'The Manager and the Bee' and the professional designer 233

12 Software Subcontracting to the Third World
R. Heeks 236
12.1 The growth and nature of subcontracting 236
12.1.1 Nature of software exports 237
12.1.2 Divisions of labour 238
12.2 Factors underlying the growth in subcontracting 240
12.2.1 The growth in subcontracting to developing countries 242
12.3 The future of global subcontracting 243
12.3.1 Opportunities 243
12.3.2 Threats 244
12.4 Conclusions: the implications of global subcontracting 246
12.4.1 For developing countries 246
12.4.2 For Western countries 247

R. Holti 251
13.1 Introduction: barriers to technological change within the development process 251
13.2 Product-based cycles of innovation in development processes 253
13.3 Quality management within the development process itself 258
13.4 Combining systems development and organizational development 261
13.5 Policy implications 262
13.5.1 Supporting innovation in development methods and tools 263
13.5.2 Systems development and organizational development 264

INDEX 267
