Preface ix

Chapter 0. Super-Brownian Motion and Partial Differential Equations 1  
  1. Brownian motion and the Laplace equation 1  
  2. A nonlinear equation 1  
  3. Super-Brownian approach to (2.1) 2  
  4. Super-Brownian motion 2  
  5. Range of $X$ 3  
  6. Polar sets for the Brownian and super-Brownian motions 3  
  7. Polar sets on the boundary 4  
  8. Martin boundary theory for equation $Lv = v^\alpha$ 5  
  9. Solutions in $\mathbb{R}^d \setminus \{0\}$ 6  
  10. Positive solutions of $\Delta v = v^2$ in the unit disk 7

Chapter 1. Introduction 9  
  1. Branching measure-valued processes 9  
  2. Superprocesses 13  
  3. Critical BMV processes and superprocesses 17  
  4. Superprocesses with a finite base space 19  
  5. Superdiffusions and partial differential equations 21

Chapter 2. Markov Processes 25  
  1. Markov transition functions and Markov semigroups 25  
  2. Markov processes 26  
  3. Remarkable classes of functions associated with a right process 28  
  4. Additive functionals of a Hunt process 31  
  5. Additive martingales. Lévy measure 38  
  6. Stopping distributions and randomized stopping times 43

Chapter 3. Construction of Superprocesses 45  
  1. Branching 45  
  2. Branching particle systems 46  
  3. Superprocesses 48  
  4. The existence theorem 52

Chapter 4. General Feynman-Kac formula 63  
  1. Central result 63  
  2. Derivation of the classical Feynman-Kac formula 67  
  3. Application of the Lévy measure 68
Chapter 5. Change of Parameters in Superprocesses
1. Change of parameters
2. General existence theorem
3. Superprocesses with finite first moments

Chapter 6. Structure of Branching Measure-Valued Processes
1. Introduction
2. Relations between processes $\xi$ and $X$
3. Preliminary form of log-Laplace equation
4. Linearity of $\langle \alpha_f \rangle$ and $L$
5. Approximation of $\langle \alpha_f \rangle$
6. Localization of $\langle \alpha_f \rangle$ and $L$
7. Characteristic of continuous branching
8. Characteristic of discontinuous branching

Chapter 7. Historical Notes and Comments
1. Definition of BMV processes
2. Construction of BMV processes
3. Structure of BMV processes
4. Branching measure-valued processes as solutions of martingale problem

Appendix. Elements of Stochastic Calculus
1. Martingales and related topics
2. Stochastic integration with respect to semimartingales
