

TABLE OF CONTENTS

	List of figures.....	viii
one	Introduction	1
1.1	The role of government: diverging assessments.....	3
1.1.1	Eastern Europe from plan to market.....	3
1.1.2	More market in Europe and the United States of America.....	4
1.1.3	Asia - growth through government	4
1.1.4	The policy debate	5
1.1.5	A battle of paradigms	6
1.2	The information revolution and the regulation dilemma	8
1.2.1	The information revolution	8
1.2.2	The coming of post-industriality	9
1.2.3	The case of computer software.....	10
1.2.4	From software to the information economy.....	11
1.3	Thesis and structure of the argument	12
1.4	Remarks on methodology	14
1.4.1	Economics between neo-classics and evolution.....	14
1.4.1.1	The logic of deduction.....	15
1.4.1.2	Assessing changing systems - institutional and evolutionary economics	16
1.4.1.3	Economics as a Kuhnian paradigm battle	17
1.4.2	Perception and truth	17
1.4.3	Prescription in economics	18
1.4.4	Future and uncertainty.....	19
1.4.5	Scientific methodology used in the essay.....	20
1.4.6	Further remarks	20
two	Information in economic systems	21
2.1	What is information ?	22
2.1.1	Information and knowledge	22
2.1.2	Organisation and value.....	23
2.1.3	Knowledge production.....	24
2.1.4	Related concepts.....	24
2.1.5	Understanding of knowledge and information in this essay	26
2.2	Information in economic systems	27

2.2.1	Information as resource, commodity and communication	27
2.2.2	Information-based products	28
2.2.3	Information as good or service.....	30
2.3	Characteristics of information.....	32
2.4	Conclusion	36
three	Theories of regulation	37
3.1	Market and plan - competing allocation systems.....	38
3.1.1	Allocation systems	38
3.1.2	Performance criteria	39
3.2	Neo-classical arguments for market regulation	43
3.2.1	The objective of Pareto-optimality.....	43
3.2.2	The neo-classical understanding of production.....	45
3.2.3	The market regulation argument	46
3.2.3.1	Decreasing costs	47
3.2.3.2	Externalities and public goods	47
3.2.3.3	Market imperfections - information imperfections and risk.....	49
3.2.4	Industrial regulation to correct market failure.....	50
3.2.5	Neo-classical regulation of information.....	51
3.2.6	A critique of neo-classical regulation theory.....	52
3.3	Regulation in evolutionary economics	55
3.3.1	Foundations of evolutionary economics	55
3.3.2	Elements of evolutionary analysis.....	57
3.3.2.1	Systems	57
3.3.2.2	Survival and efficiency.....	58
3.3.2.3	Differentiation	59
3.3.2.4	Competition and selection.....	59
3.3.2.5	Inheritance and genetic transmission (replication).....	60
3.3.2.6	Two layers of reality.....	60
3.3.2.7	Populations.....	60
3.3.2.8	Systems openness, irreversibility and path dependence.....	61
3.3.2.9	Interactions.....	62
3.3.3	Organisation and information in the evolutionary perspective	62
3.3.4	Evolutionary arguments for regulation.....	64
3.3.4.1	Self-regulation.....	64
3.3.4.2	Limits to regulation	68
3.3.4.3	Scope for nation-state level regulation.....	71
3.3.5	A critique of regulation in evolutionary economics	72
3.4	(Supra-)National approaches to regulation.....	74
3.4.1	Industrial regulation within the total policy framework.....	74

3.4.2	Instruments of industrial regulation	75
3.4.2.1	Technology and innovation policy	75
3.4.2.2	(Intellectual) property right protection	76
3.4.2.3	Competition policy	77
3.4.2.4	Trade policy.....	77
3.4.3	Levels of industrial regulation.....	78
3.4.4	(Supra-)National approaches to industrial regulation.....	79
3.4.4.1	USA.....	80
3.4.4.2	Japan.....	84
3.4.4.3	Europe (European Union)	87
3.5	Summary	91
3.5.1	Practical approaches to regulation.....	91
3.5.2	Academic approaches to regulation	93
3.5.3	Paradigmatic approaches to regulation.....	94
four	Regulation of computer software.....	95
4.1	Technical aspects of software	96
4.1.1	A definition of software	96
4.1.2	Functions of software.....	96
4.1.3	Software and hardware.....	98
4.1.4	The software development process	100
4.1.5	Standardisation and packaging of software.....	103
4.1.6	Software as an information-based product.....	104
4.2	The software industry	106
4.2.1	The history of the software industry	106
4.2.2	Software as an emerging industry	107
4.2.3	Structure of software supply	108
4.2.4	Software markets.....	110
4.2.5	Major market trends	111
4.2.6	Summary: the structure of the software industry	116
4.3	Regulation of computer software.....	117
4.3.1	Methodological remarks: Assessing government regulatory influence.....	117
4.3.2	Global arrangements	119
4.3.2.1	Industrial and technological targeting	119
4.3.2.2	Intellectual property protection	120
4.3.2.3	International trade agreements	121
4.3.3	Software regulation in the USA	123
4.3.3.1	Software market and suppliers.....	123
4.3.3.2	Scope and agents of industrial policy.....	125
4.3.3.3	Technology support programmes	126
4.3.3.4	Property rights protection.....	129

4.3.3.5	Competition policy.....	130
4.3.3.6	Trade policy.....	133
4.3.4	Software regulation in Japan.....	133
4.3.4.1	Software markets and supply	133
4.3.4.2	IT- and software-specific policies and programmes.....	135
4.3.4.3	Property rights protection.....	144
4.3.4.4	Competition policy.....	144
4.3.4.5	Other policies	144
4.3.5	European Union (European Communities).....	145
4.3.5.1	Software markets.....	145
4.3.5.2	National markets and policies	147
4.3.5.3	Europe-wide policies.....	150
4.3.5.4	Property rights protection.....	156
4.3.5.5	Competition policy.....	157
4.4	Regulation of software markets: summary and conclusion.....	158
4.4.1	Structure of the industry.....	158
4.4.2	Regulation approaches to software markets.....	159
4.4.3	Paradigmatic approaches to software regulation.....	162
4.4.4	Computer software as a 'virtual' good ?	167
five	The information economy and the regulation of information markets	169
5.1	The informatisation of economic activities	171
5.1.1	Goods and services	171
5.1.2	Information-based industries.....	172
5.1.2.1	Dematerialisation of economic activities	173
5.1.2.2	Information industries	173
5.2	Views on the information society.....	174
5.2.1	Bell's post-industrial society.....	176
5.2.2	The information economy according to Stonier.....	177
5.2.3	The information economy according to Reich.....	180
5.2.4	Conclusion: Claims on the information economy.....	183
5.3	The network structure of information markets	185
5.3.1	Information markets as networks.....	185
5.3.2	Enabling technologies	187
5.3.2.1	Decentral information processing	187
5.3.2.2	Intelligent systems.....	189
5.3.2.3	Open systems and connection standardisation.....	190
5.3.3	An inventory of physical networks.....	191
5.3.3.1	Foreshadowing information markets: Videotext systems	191
5.3.3.2	INTERNET	192

5.3.3.3	ISDN and other value-added communication networks.....	193
5.3.3.4	The National Information Infrastructure (Information Superhighway)	194
5.3.4	Summary	195
5.4	Network-based information commerce	196
5.4.1	Miller and Drexler's computational markets.....	196
5.4.2	Categories of network-traded information	199
5.4.3	Information market structures	200
5.4.3.1	Private suppliers.....	200
5.4.3.2	Public (network) goods	203
5.4.3.3	The competitive outcome of information markets	204
5.4.4	Network information markets and the information economy	207
5.5	Government regulation in network economies.....	208
5.5.1	Providing the physical network.....	208
5.5.2	Government as a network manager.....	209
5.5.3	Promoting competition of networks.....	210
5.5.4	Providing public information goods.....	210
six	Government and the regulation of information concluding remarks	213
6.1	Information as an economic good.....	214
6.2	The structure of the information economy	216
6.3	The understanding of government	217
6.4	The role of government in the information economy	219
6.4.1	Macro-economic policy.....	219
6.4.2	The provision of public goods.....	220
6.4.3	Promoting efficient competition.....	221
6.5	Conclusion	224
