PART I: THE ARGUMENT FOR VIRTUAL OPERATIONS 1

1. The Virtual Situation 2

Understanding "virtual" in the organizational context. Virtual business activities and virtual operations are examined, and barriers to the virtual transition identified.

2. Touring the Virtual Future 13

ZYX Inc., an imaginary organization, provides a futuristic example of the virtual potential, and a scenario for transitioning to virtual operations.

3. The Ameritech Story 27

A window into a real-world, high-tech initiative in progress. Illustrates goals, objectives techniques, and roles that characterize virtual work.
PART II: VIRTUAL OPERATIONS: COMPETENCIES AND ROLES

4. The Virtual Ethos: Beliefs, Knowledge, Skills, Experience

Exploring the competencies and roles that drive virtual work. Beliefs, knowledge, skills, and experience in content specialities, as well as in virtual work processes.

5. Executive and Stakeholder Management

Responsibilities of executives and stakeholders in leading the transition to virtual operations. Visioning, building relationships within and outside the organization, providing resources, and sponsoring virtual reengineering initiatives.

6. Operational Leadership

The key role in successful operations. Development of virtual leadership competencies as an essential investment for transitioning organizations.

7. Virtual Knowledge Workers

How knowledge workers are trained and motivated to create value in virtual environments.

PART III: TECHNOLOGY AND VIRTUAL OPERATIONS

8. Attitudes Toward Virtual Technologies

The new attitudes and work behaviors that executives, stakeholders, leaders, and knowledge workers must develop to encourage the use of virtual technologies.

9. Virtual Technologies: Networks and Communications

The communications technologies and techniques that enable people to work together electronically; groupware in the context of virtual work.

Technologies and processes for designing, modeling, and managing virtual operations.
PART IV: TRANSITIONING TO VIRTUAL OPERATIONS 141

11. A Strategy for Transitioning to Virtual Operations 143
High level strategic planning, making the decision to go virtual, building a core transition constituency, and engaging the organization. Building a planning and designing ethos, establishing leadership, and preparing for project start-up.

12. Tactics: Launching the Prototype Project 160
Building a committed prototyping team, understanding management specifications, envisioning future virtual processes, assessing current capabilities, designing in the virtual spin, creating the financial model, presenting the proposal, conducting and evaluating the prototype project.

13: Barriers and New Realities 169
A look at the major roadblocks to virtual operations; understanding the new dimensions of relationship building in the virtual environment: virtual alliances, partnerships, and joint ventures.

14. Getting Started: Assessing Current Organizational Capabilities 183
Determining current virtual capabilities and identifying barriers that may be encountered in the transition to virtual operations.

PART V: DESIGNING VIRTUAL OPERATIONS: KEY PROCESSES 197

15. Virtual Work Tasks 200
Process reengineering for the virtual environment. Conceptual basis for virtual task design.

16. Virtual Teaming 216
Opportunities and techniques for applying the “virtual spin” that transforms traditional teams into high performance virtual teams.

17. Virtual Communications 228
Continuous communication as a device to streamline work processes, maintain effective management control, build teams, and support learning.
18. Virtual Learning

The need for continuous learning and the potential of new processes and technologies to provide just-in-time, virtual learning.

PART VI: DESIGNING VIRTUAL OPERATIONS: GUIDELINES

19. Designing Virtual Work Tasks

Guidelines for reengineering work tasks for the virtual environment.

20. Designing Virtual Teaming

Guidelines for designing virtual teaming. Assessing competency and skill requirements, the current teaming environment, and existing teaming barriers.

21. Designing Virtual Communications

Assessing personal and team communications skills, designing communication links, and managing communications change.

22. Designing Virtual Learning

Assessing the organization’s readiness to engage in virtual learning. Evaluating competencies, determining learning gaps, and designing the appropriate virtual learning systems.

Epilogue: Virtual Realities

Advice specifically aimed at executives, stakeholders, leaders, and knowledge workers who are midstream in the virtual transition and need capabilities today!
