<b>Preface</b>	<b>xvii</b>
<b>Sri Gopal Mohanty—Life and Works</b>	<b>xix</b>
<b>List of Contributors</b>	<b>xxvii</b>
<b>List of Tables</b>	<b>xxxix</b>
<b>List of Figures</b>	<b>xxxiii</b>
<b>PART I—LATTICE PATHS AND COMBINATORIAL METHODS</b>	
<b>1 Lattice Paths and Faber Polynomials</b>	<b>3</b>
<i>Ira M. Gessel and Sangwook Ree</i>	
1.1 Introduction, 3	
1.2 Faber Polynomials, 6	
1.3 Counting Paths, 7	
1.4 A Positivity Result, 10	
1.5 Examples, 11	
References, 13	
<b>2 Lattice Path Enumeration and Umbral Calculus</b>	<b>15</b>
<i>Heinrich Niederhausen</i>	
2.1 Introduction, 15	
2.1.1 Notation, 16	
2.2 Initial Value Problems, 16	
2.2.1 The role of $e^x$ , 18	
2.2.2 Piecewise affine boundaries, 18	
2.2.3 Applications: Bounded paths, 19	
2.3 Systems of Operator Equations, 20	
2.3.1 Applications: Lattice paths with several step directions, 21	
2.4 Symmetric Sheffer Sequences, 21	
2.4.1 Applications: Weighted left turns, 22	
2.4.2 Paths inside a band, 23	

2.5 Geometric Sheffer Sequences, 24	
2.5.1 Applications: Crossings, 25	
References, 26	
<b>3 The Enumeration of Lattice Paths With Respect to Their Number of Turns</b>	
<i>C. Krattenthaler</i>	<b>29</b>
3.1 Introduction, 29	
3.2 Notation, 31	
3.3 Motivating Examples, 31	
3.4 Turn Enumeration of (Single) Lattice Paths, 36	
3.5 Applications, 44	
3.6 Nonintersecting Lattice Paths and Turns, 47	
References, 55	
<b>4 Lattice Path Counting, Simple Random Walk Statistics, and Randomizations: An Analytic Approach</b>	
<i>Wolfgang Panny and Walter Katzenbeisser</i>	<b>59</b>
4.1 Introduction, 59	
4.2 Lattice Paths, 60	
4.3 Simple Random Walks, 64	
4.4 Randomized Random Walks, 70	
References, 74	
<b>5 Combinatorial Identities: A Generalization of Dougall's Identity</b>	
<i>Erik Sparre Andersen and Mogens Esrom Larsen</i>	<b>77</b>
5.1 Introduction, 77	
5.2 The Generalized Pfaff–Saalschütz Formula, 80	
5.3 A Modified Pfaff–Saalschütz Sum of Type $II(4, 4, 1)N$ , 82	
5.4 A Well–Balanced $II(5, 5, 1)N$ Identity, 83	
5.5 A Generalization of Dougall's Well–Balanced $II(7, 7, 1)N$ Identity, 85	
References, 87	
<b>6 A Comparison of Two Methods for Random Labelling of Balls by Vectors of Integers</b>	
<i>Doron Zeilberger</i>	<b>89</b>
6.1 First Way, 89	
6.2 Second Way, 89	
6.3 Variance and Standard Deviation, 91	

- 6.4 Analysis of the Second Way, 92  
References, 93

## PART II—APPLICATIONS TO PROBABILITY PROBLEMS

### 7 On the Ballot Theorems

*Lajos Takács*

97

- 7.1 Introduction, 97  
7.2 The Classical Ballot Theorem, 97  
7.3 The Original Proofs of Theorem 7.2.1, 100  
7.4 Historical Background, 102  
7.5 The General Ballot Theorem, 104  
7.6 Some Combinatorial Identities, 107  
7.7 Another Extension of The Classical Ballot Theorem, 109  
References, 111

### 8 Some Results for Two-Dimensional Random Walk

*Endre Csáki*

115

- 8.1 Introduction, 115  
8.2 Identities and Distributions, 118  
8.3 Pairs of LRW Paths, 120  
References, 123

### 9 Random Walks on $SL(2, F_2)$ and Jacobi Symbols of Quadratic Residues

*Toshihiro Watanabe*

125

- 9.1 Introduction, 125  
9.2 Preliminaries, 126  
9.3 A Calculation of the Character  $\chi(\sigma_{M,m})$  and Its Relation, 129  
References, 133

### 10 Rank Order Statistics Related to a Generalized Random Walk

*Jagdish Saran and Sarita Rani*

135

- 10.1 Introduction, 135  
10.2 Some Auxiliary Results, 136  
10.3 The Technique, 138  
10.4 Definitions of Rank Order Statistics, 139  
10.5 Distributions of  $N_{\mu,n}^{+*}(a)$  and  $R_{\mu,n}^{+*}(a)$ , 140  
10.6 Distributions of  $\Lambda_{\mu,n}^+(a)$  and  $Rf_{\mu,n}^+(a)$ , 144  
10.7 Distributions of  $N_{\mu,n}^*(a)$  and  $R_{\mu,n}^*(a)$ , 148  
References, 151

- 11 On a Subset Sum Algorithm and Its Probabilistic and Other Applications**  
*V. G. Voinov and M. S. Nikulin* **153**
- 11.1 Introduction, 153  
 11.2 A Derivation of the Algorithm, 154  
 11.3 A Class of Discrete Probability Distributions, 159  
 11.4 A Remark on a Summation Procedure When Constructing Partitions, 160  
 References, 162
- 12  $I$  and  $J$  Polynomials in a Potpourri of Probability Problems**  
*Milton Sobel* **165**
- 12.1 Introduction, 165  
 12.2 Guide to the Problems of this Paper, 166  
 12.3 Triangular Network with Common Failure Probability  $q$  for Each Unit, 171  
 12.4 Duality Levels in a Square with Diagonals That Do Not Intersect: Problem 12.5, 177  
 References, 183
- 13 Stirling Numbers and Records**  
*N. Balakrishnan and V. B. Nevzorov* **189**
- 13.1 Stirling Numbers, 189  
 13.2 Generalized Stirling Numbers, 190  
 13.3 Stirling Numbers and Records, 193  
 13.4 Generalized Stirling Numbers and Records in the  $F^\alpha$ -scheme, 195  
 13.5 Record Values from Discrete Distributions and Generalized Stirling Numbers, 197  
 References, 198

### PART III—APPLICATIONS TO URN MODELS

- 14 Advances in Urn Models During The Past Two Decades**  
*Samuel Kotz and N. Balakrishnan* **203**
- 14.1 Introduction, 203  
 14.2 Pólya-Eggenberger Urns and Their Generalizations and Modifications, 206  
 14.3 Generalizations of the Classical Occupancy Model, 216  
 14.4 Ehrenfest Urn Model, 219

- 14.5 Pólya Urn Model with a Continuum of Colors, 225
- 14.6 Stopping Problems in Urns, 226
- 14.7 Limit Theorems for Urns with Random Drawings, 227
- 14.8 Limit Theorems for Sequential Occupancy, 228
- 14.9 Limit Theorems for Infinite Urn Models, 230
- 14.10 Urn Models with Indistinguishable Balls (Bose-Einstein Statistics), 231
- 14.11 Ewens Sampling Formula and Coalescent Urn Models, 233
- 14.12 Reinforcement-Depletion (Compartmental) Urn Models, 237
- 14.13 Urn Models for Interpretation of Mathematical and Probabilistic Concepts and Engineering and Statistical Applications, 243  
References, 247

**15 A Unified Derivation of Occupancy and Sequential Occupancy Distributions**

*Ch. A. Charalambides*

**259**

- 15.1 Introduction, 259
- 15.2 Occupancy Distributions, 260
- 15.3 Sequential Occupancy Distributions, 267  
References, 273

**16 Moments, Binomial Moments and Combinatorics**

*Janos Galambos*

**275**

- 16.1 Basic Relations, 275
- 16.2 Linear Inequalities in  $S_k$ ,  $p_r$  and  $q_r$ , 277
- 16.3 A Statistical Paradox and an Urn Model with Applications, 280
- 16.4 Quadratic Inequalities, 281  
References, 283

**PART IV—APPLICATIONS TO QUEUEING THEORY**

**17 Nonintersecting Paths and Applications to Queueing Theory**

*Walter Böhm*

**287**

- 17.1 Introduction, 287
- 17.2 Dissimilar Bernoulli Processes, 288
- 17.3 The  $r$ -Node Series Jackson Network, 291
- 17.4 The Dummy Path Lemma for Poisson Processes, 295
- 17.5 A Special Variant of  $D/M/1$  Queues, 297

References, 299

<b>18</b>	<b>Transient Busy Period Analysis of Initially Non-Empty <math>M/G/1</math> Queues—Lattice Path Approach</b>	<b>301</b>
	<i>Kanwar Sen and Manju Agarwal</i>	
18.1	Introduction, 301	
18.2	Lattice Path Approach, 304	
18.3	Discretized $M/C_2/1$ Model, 304	
	18.3.1 Transition probabilities, 304	
	18.3.2 Counting of lattice paths, 307	
	18.3.3 Busy period probability, 310	
18.4	Continuous $M/C_2/1$ Model, 312	
18.5	Particular Cases, 313	
	References, 313	
<b>19</b>	<b>Single Server Queueing System with Poisson Input: A Review of Some Recent Developments</b>	<b>317</b>
	<i>J. Medhi</i>	
19.1	Introduction, 317	
19.2	Exceptional Service for the First Unit in Each Busy Period, 319	
19.3	$M/G/1$ With Random Setup Time $S$ , 320	
19.4	$M/G/1$ System Under $N$ -Policy, 322	
19.5	$M/G/1$ Under $N$ -Policy and With Setup Time, 323	
19.6	Queues With Vacation: $M/G/1$ Queueing System With Vacation, 324	
19.7	$M/G/1 - V_m$ System, 325	
19.8	$M/G/1 - V_m$ With Exceptional First Vacation, 326	
19.9	$M/G/1 - V_s$ System, 327	
19.10	$M/G/1$ System With Vacation and Under $N$ -Policy (With Threshold $N$ ), 328	
19.11	$M^X/G/1$ System With Batch Arrival, 332	
19.12	$M^X/G/1$ Under $N$ -Policy, 332	
19.13	$M^X/G/1 - V_m$ and $M^X/G/1 - V_s$ , 334	
19.14	$M^X/G/1$ Vacation Queues Under $N$ -Policy, 334	
19.15	Concluding Remarks, 335	
	References, 336	
<b>20</b>	<b>Recent Advances in the Analysis of Polling Systems</b>	<b>339</b>
	<i>Diwakar Gupta and Yavuz Günalay</i>	
20.1	Introduction, 339	
20.2	Notations and Preliminaries, 342	
20.3	Main Results, 346	

- 20.4 Some Related Models, 350
  - 20.4.1 Customer routing, 350
  - 20.4.2 Stopping only at a preferred station, 351
  - 20.4.3 Gated or mixed service policy, 351
  - 20.4.4 State-dependent setups, 352
  - 20.4.5 Periodic monitoring during idle period, 354
- 20.5 Insights, 355
- 20.6 Future Directions, 357
  - References, 357

## PART V—APPLICATIONS TO WAITING TIME PROBLEMS

### **21 Waiting Times and Number of Appearances of Events in a Sequence of Discrete Random Variables**

*Markos V. Koutras*

**363**

- 21.1 Introduction, 363
- 21.2 Definitions and Notations, 365
- 21.3 General Results, 366
- 21.4 Waiting Times and Number of Occurrences of Delayed Recurrent Events, 370
- 21.5 Distribution of the Number of Success Runs in a Two-State Markov Chain, 373
  - 21.5.1 Non-overlapping success runs, 374
  - 21.5.2 Success runs of length at least  $k$ , 376
  - 21.5.3 Overlapping success runs, 378
  - 21.5.4 Number of non-overlapping windows of length at most  $k$  containing exactly 2 successes, 378
- 21.6 Conclusions, 380
  - References, 380

### **22 On Sooner and Later Problems Between Success and Failure Runs**

*Sigeo Aki*

**385**

- 22.1 Introduction, 385
- 22.2 Number of Occurrences of the Sooner Event Until the Later Waiting Time, 387
- 22.3 Joint Distribution of Numbers of Runs, 397
  - References, 399

- 23 Distributions of Numbers of Success-Runs Until the First Consecutive  $k$  Successes in Higher Order Markov Dependent Trials**  
*Katuomi Hirano, Sigeo Aki and Masayuki Uchida* **401**
- 23.1 Introduction, 401  
 23.2 Numbers of Success-Runs in Higher Order Markov Chain, 403  
 23.3 Case  $l < m$ , 408  
 References, 409
- 24 On Multivariate Distributions of Various Orders Obtained by Waiting for the  $r$ -th Success Run of Length  $k$  in Trials With Multiple Outcomes**  
*Demetrios L. Antzoulakos and Andreas N. Philippou* **411**
- 24.1 Introduction, 412  
 24.2 Independent Trials, 413  
 24.3 Generalized Sequence of Order  $k$ , 420  
 References, 423
- 25 A Multivariate Negative Binomial Distribution of Order  $k$  Arising When Success Runs are Allowed to Overlap**  
*Gregory A. Tripsiannis and Andreas N. Philippou* **427**
- 25.1 Introduction, 427  
 25.2 Multivariate Negative Binomial Distribution of Order  $k$ , Type III, 429  
 25.3 Characteristics and Distributional Properties of  $\overline{MNB}_{k,III}(r; q_1, \dots, q_m)$ , 431  
 References, 436

## PART VI—APPLICATIONS TO DISTRIBUTION THEORY

- 26 The Joint Energy Distributions of the Bose-Einstein and of the Fermi-Dirac Particles**  
*I. Vincze and R. Törös* **441**
- 26.1 Introduction, 441  
 26.2 Derivation of the Joint Distribution and of the Joint Entropy, 442  
   26.2.1 On the method, 442  
   26.2.2 Joint distribution of the number of particles in energy intervals, 444  
 26.3 Determination of the Limit Distributions, 447  
 26.4 Discussion, 448

References, 449

**27 On Modified  $q$ -Bessel Functions and Some Statistical Applications**

*A. W. Kemp* **451**

27.1 Introduction, 451

27.2 Notation, 453

27.3 The Distribution of the Difference of Two Euler Random Variables, 456

27.4 The Distribution of the Difference of Two Heine Random Variables, 458

27.5 Comments on the Distribution of the Difference of Two Generalized Euler Random Variables, 460  
References, 462

**28 A  $q$ -Logarithmic Distribution**

*C. David Kemp* **465**

28.1 Introduction, 465

28.2 A  $q$ -Logarithmic Distribution, 467

28.3 A Group Size Model for the Distribution, 469  
References, 470

**29 Bernoulli Learning Models: Uppuluri Numbers**

*K. G. Janardan* **471**

29.1 Introduction, 471

29.2 The General Model, 472

29.2.1 Special cases of the general probabilistic model, 474

29.3 Waiting Time Learning Models, 476

29.3.1 Special cases of waiting time learning models, 478

References, 480

**PART VII—APPLICATIONS TO NONPARAMETRIC STATISTICS**

**30 Linear Nonparametric Tests Against Restricted Alternatives: The Simple-Tree Order and The Simple Order**

*S. Chakraborti and W. Schaafsma* **483**

30.1 Introduction, 484

30.2 Background, 485

30.3 Objectives, 486

30.4 Exploration and Reformulation, 487

30.5 Test for the Simple-Tree Problem, 487

30.5.1 Some particular cases, 490

30.5.2 Derivation of the MSSMP test, 493

30.6	Test for the Simple Order Problem, 496	
30.6.1	Derivation of the (A)MSSMP test, 497	
30.6.2	Power comparisons, 499	
30.7	Extending the Class of SMP Tests, 501	
	Appendix, 503	
	References, 505	
<b>31</b>	<b>Nonparametric Estimation of the Ratio of Variance Components</b>	
	<i>M. Mahibbur Rahman and Z. Govindarajulu</i>	<b>507</b>
31.1	Introduction, 507	
31.2	Proposed Estimation Procedure, 510	
31.3	Monte Carlo Comparison, 512	
31.4	Adjustment for Bias, 514	
	References, 515	
<b>32</b>	<b>Limit Theorems for M-Processes Via Rank Statistics Processes</b>	
	<i>M. Hušková</i>	<b>521</b>
32.1	Introduction, 521	
32.2	Case $\theta_1 = \dots = \theta_n$ , 522	
32.3	Change Point Alternatives, 526	
	References, 533	
	<b>Author Index</b>	<b>535</b>
	<b>Subject Index</b>	<b>545</b>
