

Contents

Section I: Overview

I.1 Microcharacterization of Proteins 3 *Friedrich Lottspeich and Roland Kellner*

- 1 General Aspects 4
- 2 From a Cell to a Protein Sequence 4
- 3 Genome and Proteome 9

Section II: Microseparation Techniques and Sample Preparation

II.1 Microseparation Techniques I: High Resolution Gel-Electrophoretic Techniques: Qualitative, Quantitative and Micropreparative Applications 13 *Angelika Görg and Reiner Westermeier*

- 1 Introduction 13
- 2 Theory 13
- 3 Media and Equipment 15
 - 3.1 Media 15
 - 3.2 Equipment 15
- 4 Gel Electrophoretic Methods 16
 - 4.1 Disc Electrophoresis 16
 - 4.2 Gradient Gel Electrophoresis 16
 - 4.3 Additives in Electrophoresis 16

- 4.4 SDS Electrophoresis 17
- 4.5 Isoelectric Focusing 19
- 4.6 Two-Dimensional Electrophoresis (2-DE) 21
- 5 References 24

II.2 Microseparation Techniques II: **Gel Electrophoresis for Sample Preparation in Protein Chemistry** 25 *Hermann Schagger*

- 1 Introduction 25
- 2 Denaturing Techniques 26
- 2.1 Commonly Used SDS-Polyacrylamide Gel Electrophoresis
Techniques for Protein Separation 26
- 2.2 Blue-SDS-PAGE for Recovery of Membrane Proteins from Gels 28
- 2.3 Electroelution of Proteins after Blue-SDS-PAGE 29
- 2.4 Electroblothing of Blue and Colorless SDS Gels 29
- 2.5 Isoelectric Focusing in the Presence of Urea 30
- 3 Native Techniques 31
- 3.1 Colorless-Native-PAGE 31
- 3.2 Blue-Native-PAGE 31
- 3.3 Native Isoelectric Focusing 32
- 4 References 33

II.3 Microseparation Techniques III: **Electroblothing** 35 *Christoph Eckerskorn*

- 1 Introduction 35
- 2 Electroblothing 35
- 2.1 Polyacrylamide Gel Electrophoresis 36
- 2.2 Blot Systems 37
- 2.2.1 Tank Blotting 37
- 2.2.2 Semidry Blotting 38
- 2.3 Blotting Parameters 40
- 2.3.1 The Blotting Process 40
- 2.3.2 Transfer Buffers 41
- 2.3.3 Addition of SDS 41
- 2.3.4 Addition of Methanol 42
- 2.3.5 Influence of Protein Concentration 42
- 3 Blotting Membranes 43
- 4 References 46

II.4 Microseparation Techniques IV: Analysis of Peptides and Proteins by Capillary Electrophoresis 49

Christine Schwer

- 1 Introduction 49
- 2 Theory 49
- 2.1 Capillary Isotachopheresis 50
- 2.2 Capillary Zone Electrophoresis 51
- 2.3 Electroosmotic Flow 52
- 3 Instrumentation 54
- 3.1 Injection 54
- 3.2 Detection 57
- 4 Applications 60
- 4.1 Peptide Separations 60
- 4.2 Protein Separations 60
- 5 References 64

II.5 Microseparation Techniques V: High Performance Liquid Chromatography 67

Maria Serwe, Martin Blüggel and Helmut E. Meyer

- 1 Introduction 67
- 2 Principle of HPLC 67
- 3 Getting Started 69
- 3.1 Solvents 69
- 3.2 Pump 70
- 3.3 Gradient 71
- 3.4 Pre-Column Split 72
- 3.5 Sample Preparation 72
- 3.6 Injector 73
- 3.7 Tubings 73
- 3.8 In-Line Filter, Guard Column 73
- 3.9 Column 74
- 3.10 Detection 76
- 3.11 Fractionation 77
- 4 Applications 78
- 5 References 84

II.6 Sample Preparation I:

Removal of Salts and Detergents 87

Dorian Immler, Ehrenfried Mehl, Friedrich Lottspeich and Helmut E. Meyer

- 1 Introduction 87
- 2 Removal of Salts or Polar Components 88
- 2.1 Protein-Binding Membranes 88
- 2.2 High Performance Liquid Chromatography 89
- 2.3 Desalting on Microcolumns 90
- 3 Removal of Detergents and Apolar Contaminants 90
- 3.1 Detergents 90
- 3.2 Protein-binding Membranes 91
- 3.3 Precipitation 91
- 3.4 SDS-PAGE 93
- 3.5 Concentrating Gels 94
- 4 “Golden Rules” for Protein and Peptide Handling 94
- 5 References 95

II.7 Sample Preparation II:

Chemical and Enzymatic Fragmentation of Proteins 97

Roland Kellner and Tony Houthaeve

- 1 Strategy 97
- 2 Denaturation, Reduction and Alkylation 99
- 3 Enzymatic Fragmentation 101
- 3.1 Enzymes 102
- 3.2 Practical Considerations 104
- 3.2.1 Practical Considerations for On-Membrane Digestions 104
- 3.2.2 Practical Considerations for In-Gel Digestions 105
- 3.2.3 Automation of Digest Procedures 107
- 4 Chemical Fragmentation 108
- 4.1 Cyanogen Bromide Cleavage 108
- 4.2 Partial Acid Hydrolysis 110
- 4.3 Hydroxylamine Cleavage of Asn-Gly Bonds 111
- 4.4 Cleavage at Tryptophan 113
- 4.5 Cleavage at Cysteine 113
- 5 References 113

Section III: Bioanalytical Characterization

III.1 Amino Acid Analysis 119

Roland Kellner, Helmut E. Meyer and Friedrich Lottspeich

- 1 Introduction 119
- 2 Sample Preparation 120
 - 2.1 Peptides and Proteins 120
 - 2.1.1 Enzymatic Hydrolysis 121
 - 2.1.2 Acid Hydrolysis 121
 - 2.1.3 Alkaline Hydrolysis 122
 - 2.2 Free Amino Acids 123
- 3 Derivatization 123
 - 3.1 Post-Column Derivatization 125
 - 3.1.1 Ninhydrin 125
 - 3.1.2 Orthophthaldialdehyde 125
 - 3.1.3 Fluorescamine 127
 - 3.2 Pre-Column Derivatization 127
 - 3.2.1 Phenylisothiocyanate 128
 - 3.2.2 Orthophthaldialdehyde 128
 - 3.2.3 Fluorenylmethyl Chloroformate 128
 - 3.2.4 Dabsyl Chloride 128
 - 3.2.5 Dansyl Chloride 129
 - 3.2.6 Chiral Reagents 129
- 4 Data Evaluation 131
- 5 Instrumentation 132
- 6 Discussion 134
- 7 References 136

III.2 Chemical Methods for Protein Sequence Analysis 141

Friedrich Lottspeich, Tony Houthaevae and Roland Kellner

- 1 The Edman Degradation 141
 - 1.1 Coupling, Cleavage and Conversion 141
 - 1.2 Identification of the PTH Amino Acids 143
- 2 Instrumentation 145
 - 2.1 The Liquid Phase Sequencer 146
 - 2.2 The Solid Phase Sequencer 147
 - 2.3 The Gas Phase Sequencer 147
 - 2.4 The Pulsed Liquid Phase Sequencer 148
 - 2.5 The Biphasic Column Sequencer 148
- 3 Difficulties of Amino Acid Sequence Analysis 149
 - 3.1 The Sample and Sample Matrices 149
 - 3.2 Difficulties with the Edman Chemistry 151

- 4 C-Terminal Sequence Analysis 152
- 4.1 Chemical Degradation 153
- 4.2 Enzymatic Methods 155
- 4.3 Methods Combined with Mass Spectrometry 156
- 5 References 157

III.3 Analyzing Post-Translational Protein Modifications 159 *Helmut E. Meyer*

- 1 Introduction 159
- 2 Classification of Post-Translational Modifications According to their Behavior during Purification and Edman Degradation 160
- 2.1 Modifications: Stable during Purification and Edman Degradation 160
- 2.2 Modifications: Stable during Purification but Unstable during Edman Degradation 160
- 2.3 Modifications: Unstable during Purification and Edman Degradation 161
- 3 Examples 161
- 3.1 1-Methyl-Histidine 161
- 3.2 Glyco-Asparagine, Glyco-Threonine 161
- 3.3 Phospho-Tyrosine 162
- 3.4 N-Pyruvyl or N- α -Oxo-Butyric Acid 163
- 3.5 Gluco-Arginine 165
- 3.6 Farnesyl-Cysteine 167
- 3.7 Phospho-Serine 169
- 3.8 Phospho-Threonine 169
- 3.9 Screening for Phospho-Serine/Threonine Containing Peptides by HPLC/MS 169
- 3.10 Lanthionine, 3-Methyl-Lanthionine, Dehydroalanine, Dehydro- α -aminobutyric Acid 173
- 4 References 174

III.4 Analysis of Biopolymers by Matrix-Assisted Laser Desorption/Ionization (MALDI) Mass Spectrometry 177 *Ute Bahr, Michael Karas and Franz Hillenkamp*

- 1 Introduction 177
- 2 Development of MALDI 178
- 2.1 Mechanism of Matrix-Assisted Laser Desorption/Ionization 178
- 3 Instrumentation 179
- 3.1 Time-of-Flight (TOF) Mass Spectrometers 179
- 3.2 Laser Desorption Ion Source 181
- 3.3 Ion Detection and Data Collection 182

- 4 Applications 182
- 4.1 Sample Preparation 182
- 4.2 Ion Fragmentation 183
- 4.3 Molecular Weight Determination of Proteins and Glycoproteins 183
- 4.3.1 Accuracy of Mass Determination 187
- 4.3.2 Sensitivity and Mass Range 187
- 4.4 Analysis of Oligonucleotides 188
- 4.5 Analysis of Glycans and Glycoconjugates 189
- 5 Combination of MALDI with Biochemical Methods 190
- 5.1 Peptide Mapping of Digested Proteins by MALDI 190
- 5.2 Combination of MALDI and Gel Electrophoresis 191
- 5.3 Combination of MALDI with Capillary Zone Electrophoresis 192
- 6 References 192

III.5 MALDI Postsource Decay Mass Analysis 197

Bernhard Spengler, Pierre Chaurand and Peter Bold

- 1 Introduction 197
- 2 Methodology and Principal Mechanisms of Postsource Decay 198
- 2.1 Internal Energy Uptake and Ion Stability 198
- 2.2 Instrumentation for MALDI-PSD Analysis 199
- 2.3 Precursor Ion Selection 201
- 3 Applications and Spectra Interpretation 201
- 3.1 Sequence Analysis of Peptides 204
- 3.2 Primary Structure Analysis of Unknown Peptides 209
- 3.3 Primary Structure Analysis of Modified Peptides and Other Biomolecules 209
- 4 Potential and Perspectives 209
- 5 References 210

III.6 Electrospray Mass Spectrometry 213

Jörg W. Metzger, Christoph Eckerskorn, Christoph Kempter and Beate Behnke

- 1 Introduction 213
- 2 Instrumentation 213
- 2.1 The Electrospray Source 214
- 2.2 The Mass Analyzer 217
- 2.3 The Detector 218
- 3 Mass Spectra of Proteins 219
- 4 Coupling of Chromatographic Methods to the Mass Spectrometer 221
- 4.1 On-Line HPLC-MS 221
- 4.2 Coupling of a Protein Sequencer to an ESI Mass Spectrometer 224
- 4.3 Microcapillary LC Coupled to Mass Spectrometry 225

- 4.4 Capillary Electrophoresis Coupled to Mass Spectrometry 227
- 5 Purity Control of Synthetic Peptides 228
- 5.1 Sample Introduction with an Autosampler 228
- 5.2 Off-Line HPLC-MS 229
- 5.3 Characterization of Combinatorial Compound Collections 229
- 6 References 232

III.7 Fourier-Transform Ion Cyclotron Resonance Mass Spectrometry (FT-ICR-MS) 235

Jörg W. Metzger

- 1 Introduction 235
- 2 Principle 236
- 2.1 Resolution, Mass Accuracy, Mass Range and Sensitivity 240
- 2.2 Tandem Mass Spectrometry 241
- 3 Electrospray and FT-ICR-MS 242
- 4 References 243

III.8 Sequence Analysis of Proteins and Peptides by Mass Spectrometry 245

Christoph Siethoff, Christiane Lohaus and Helmut E. Meyer

- 1 Introduction 245
- 2 Basics in Peptide Fragmentation 247
- 3 Instrumentation and Generation of MS/MS Data Sets 249
- 3.1 MALDI-PSD Time-of-Flight Mass Spectrometry 249
- 3.2 ESI-Triple Stage Quadrupole Mass Spectrometry 251
- 3.3 ESI-Ion Trap Mass Spectrometry 252
- 3.4 ESI-Quadrupole-TOF Mass Spectrometry 254
- 4 Coupling Methods for Mass Spectrometry 256
- 4.1 HPLC Mass Spectrometry 256
- 4.2 CZE Mass Spectrometry 259
- 4.3 Microchips 260
- 4.4 Nanospray 260
- 5 Identification of Posttranslational Modifications 261
- 5.1 Disulfide Bond Location 261
- 5.2 Other Posttranslational Modifications 262
- 6 Interpretation of Mass Spectrometric Data 264
- 6.1 Identification of Proteins by Database Search 264
- 6.2 De novo Sequencing of Peptides 269
- 7 References 269

Section IV: Computer Sequence Analysis

IV.1 Internet Resources for Protein

Identification and Characterization 277

Pierre-Alain Binz, Marc R. Wilkins, Elisabeth Gasteiger, Amos Bairoch, Ron D. Appel and Denis F. Hochstrasser

- 1 Introduction 277
- 2 General Approach 278
 - 2.1 Experimental Attributes and Choice of Programs 278
 - 2.2 Information in Databases 279
 - 2.2.1 The Annotations in SWISS-PROT 279
 - 2.2.2 SWISS-PROT Supplement TrEMBL 279
- 3 Identification and Characterization Tools at ExpASy 281
 - 3.1 Identification Tools 281
 - 3.1.1 Identification with Sequence Tags: TagIdent 282
 - 3.1.2 Identification with Amino Acid Composition: AACompIdent 283
 - 3.1.3 Identification with Combined Attributes: MultiIdent 284
 - 3.1.4 Identification with Peptide Mass Fingerprints: PeptIdent 286
 - 3.2 Characterization Tools 287
 - 3.2.1 Compute pI/MW 287
 - 3.2.2 PeptideMass 288
 - 3.2.3 ProtParam 289
 - 3.2.4 ProtScale 289
 - 3.2.5 FindMod 290
- 4 Other Identification and Characterization Tools on the Internet 294
 - 4.1 The ProteinProspector Server (University of California San Francisco Mass Spectrometry Facility) 294
 - 4.2 The PROWL Site from the MS Groups at Rockefeller and NY Universities 295
 - 4.3 PeptideSearch at the EMBL Protein & Peptide Group 296
 - 4.4 The MOWSE Database Search Tool from the Daresbury Laboratory 296
 - 4.5 The MassSearch Page of the Computational Biochemistry Research Group Server at the ETH Zürich 296
- 5 Conclusion 297
- 6 References 297
