List of Tables	xv
Preface	xix
Acknowledgments	xxvii
Part I The Case for Corporate Demography	1
1 About Organizations	3
1.1 Aging and Learning	3
1.2 Inertia and Change	5
1.3 Competitive Intensity	7
1.4 Global Competition	9
1.5 Historical Efficiency	11
1.6 Employment and Entrepreneurship	12
1.7 A Look Ahead	14
2 The Demographic Perspective	17
2.1 Demography of Business Organizations	18
2.2 Organizing Principles of Demography	25
2.3 Formal Demography and Population Studies	26
2.4 Demographic Explanation	28
2.5 The Demography of the Work Force	31
2.6 Internal Organizational Demography	32

3	Toward a Corporate Demography	35
3.1	Earlier Efforts	36
3.2	Retaining the Classical Structure	39
3.3	Making Demography Organizational	40
3.4	A Research Strategy	56
4	Forms and Populations	59
4.1	Population versus Form	60
4.2	Identity and Form	67
4.3	Codes	68
4.4	Organizational Forms	73
4.5	Organizational Populations	74
4.6	Systems of Forms	76
4.7	Implications for Corporate Demography	78
Part II Methods of Corporate Demography		83
5	Observation Plans	85
5.1	Designs in Organizational Research	86
5.2	Trade-offs in Observation Plans	89
5.3	Impact of Observation Plans	95
6	Analyzing Vital Rates	101
6.1	Event-History Designs	101
6.2	Stochastic-Process Models	110
6.3	Life-Table Estimation	117
6.4	Constant-Rate Models	127
7	Modeling Corporate Vital Rates	135
7.1	Duration Dependence	135
7.2	Dependence on Covariates	139
7.3	Note on Left Truncation	149
7.4	Comparing Designs by Simulation	150
7.5	Simulation Findings	155
8	Demographic Data Sources	163
8.1	Criteria for Evaluating Sources	164
8.2	Commonly Used Sources	167
8.3	Using Multiple Sources	185
8.4	Data Realities	188
Part III Population Processes		191
9	Organizational Environments	193
9.1	Telephone Companies	194
9.2	Modeling Environments	197

9.3	Environmental Imprinting	205
9.4	Imprinting in High-Tech Firms	207
10	Density-Dependent Processes I	213
10.1	Models of Population Growth	214
10.2	Corporate Density Dependence	216
10.3	Theory of Density Dependence	222
10.4	Interpreting Density Dependence	228
10.5	Weighted Density	232
10.6	Programmatic Issues	236
11	Density-Dependent Processes II	239
11.1	Density Delay	240
11.2	Population-Age Interactions	243
11.3	Size Interactions	251
11.4	Multilevel Processes	253
12	Segregating Processes	261
12.1	Resource Partitioning	262
12.2	Research on Partitioning	269
12.3	Size-Localized Competition	274
Part IV	Organizational Processes	279
13	Age-Dependent Processes	281
13.1	Models of Age Dependence	282
13.2	Age-Related Liabilities	288
13.3	Age and Growth Rates	290
13.4	Theories of Age Dependence	291
13.5	Core Assumptions	296
13.6	Liabilities of Newness and Adolescence	301
13.7	Liability of Senescence	303
13.8	Alignment, Drift, and Obsolescence	306
13.9	Liability of Obsolescence	309
14	Size Dependence	313
14.1	Size and Growth Rates	315
14.2	Age, Size, and Mortality	319
14.3	Automobile Manufacturers	322
14.4	Extending the Formalization	331
15	Initial Mobilizing	339
15.1	Organizing Activities	340
15.2	Theoretical Arguments	343
15.3	Automobile Preproducers	346

16 Organizational Transformation	357
16.1 Theory and Research	358
16.2 Structural Inertia	362
16.3 Transformation and Mortality	368
16.4 Innovation in Automobile Manufacturing	374
Appendix: A Property-Based Formalization of Inertia Theory . .	377
 Part V Selected Implications	 381
17 Organization Theory	383
17.1 Equilibrium Orientation	383
17.2 Alignment and Fitness	385
17.3 Adaptation and Selection	389
17.4 Speed and Efficiency of Change	393
17.5 Historical Efficiency and Competition	397
18 Regulation	401
18.1 Early Telephony	403
18.2 Interconnection Laws	404
18.3 The Kingsbury Commitment	406
18.4 Regulation and Deregulation in Banking	411
18.5 System Dynamics after Deregulation	414
18.6 Deregulation and Organizational Growth	418
19 Employment	423
19.1 Effects on Careers	424
19.2 Corporate Demography and Job Shifts	425
19.3 Job Creation and Dissolution	426
19.4 Corporate Demography and Individual Mobility	429
19.5 Employment Benefits and Social Welfare	432
19.6 Effects of Careers on Corporate Demography	437
20 Organizational Diversity	439
20.1 Beer and Wine Industries	440
20.2 Diversity, Careers, and Inequality	444
20.3 Toward a Community Ecology of Corporations	451
 References	 453
 Index	 481

List of Figures

2.1	Number of automobile manufacturers in the United States, 1885–1981	21
2.2	Number of automobile manufacturers in France and Germany, 1885–1981	22
2.3	Number of full-license and off-shore commercial banks in Singapore, 1840–1990	23
2.4	Number of brewing firms in the United States, 1633–1995	24
2.5	Number of disk drive manufacturers in the world and in North America, 1957–1996	24
2.6	General structure of demographic explanations	31
3.1	Distribution of durations in automobile production in the U.S. industry	46
3.2	Annual entries into the U.S. automobile industry, 1885–1980	49
4.1	Decomposition of a localized set of organizations into populations	76
6.1	Illustrative life-history data on organizations	103
6.2	Cumulative count of entries in historical time	105
6.3	Cumulative count of foundings in historical time	106
6.4	Proportion of interfounding times that exceed u	106
6.5	Proportion of organizational lifetimes that exceed u	107
6.6	Number of banks in the Tokyo prefecture, 1873–1945	120
6.7	Flow of Tokyo bank foundings over time, 1873–1926	121
6.8	Product-limit survivor function for interfounding times of Tokyo banks, 1873–1926	124
6.9	Product-limit survivor function for mortality of Tokyo banks, 1873–1945	125

6.10	Cumulative hazard of founding by duration for Tokyo banks	125
6.11	Cumulative hazard of mortality for Tokyo banks	126
7.1	Estimated piecewise-exponential model for founding rates of Tokyo banks	138
7.2	Illustration of spell splitting	142
7.3	Time paths of simulated populations	156
8.1	Entries for Evansville, Ind. in N.W. Ayer and Son's <i>American Newspaper Annual and Directory</i> , 1910	169
8.2	Entries for Evansville, Ind. in N.W. Ayer and Son's <i>American Newspaper Annual and Directory</i> , 1911	170
8.3	Entries for Evansville, Ind. in N.W. Ayer and Son's <i>American Newspaper Annual and Directory</i> , 1912	171
8.4	Illustrative entries in <i>The Standard Catalog of American Cars</i> , type 1 and type 3 entries	173
8.5	Illustrative entries in <i>The Standard Catalog of American Cars</i> , type 2 entries	174
10.1	Predicted relationship between density and the founding rate of banks in Singapore	221
10.2	Predicted relationship between density and the mortality rates of banks in Singapore	222
11.1	Estimated relationship of the entry rate with density and industry age for the French automobile industry	251
12.1	Number of U.S. brewing companies by organizational form, 1975–1995	262
12.2	Resource space available under various scenarios about competition with lower concentration	264
12.3	Resource space available under various scenarios about competition with higher concentration	265
12.4	Distribution of niches in a two-dimensional resource space	267
12.5	Transformation of organizational size used in modeling scale competition	272
13.1	Estimated age dependence in the mortality process for Tokyo banks	287
13.2	Schematic representation of the expanded version of the core formalization for organizations lacking immunity	301
13.3	Schematic representation of the liability of newness for organizations lacking immunity	302
13.4	Schematic representation of the liability of senescence for organizations lacking immunity	304

14.1	Predicted relationships between relative size, tenure, and mortality for European automobile manufacturers	328
14.2	Predicted relationships between absolute size, tenure, and mortality for U.S. automobile manufacturers	329
14.3	Implied pattern of age dependence in the hazard of mortality for unendowed organizations with fragile positions in drifting environments	336
14.4	Implied pattern of age dependence in mortality hazards for unendowed organizations with robust positions for $\sigma < \tau$. . .	336
14.5	Implied pattern of age dependence in mortality hazards for unendowed organizations with robust positions for $\tau < \sigma$. . .	337
15.1	Numbers of producers and preproducers in U.S. automobile manufacturing, 1885–1981	343
15.2	Entries of producers and preproducers into U.S. automobile manufacturing, 1885–1981	347
16.1	Two scenarios for the effect of transformation at age u_c on mortality with negative age dependence	372
17.1	Illustration of three mechanisms for alignment	390
17.2	Variations in the speed and directionality of processes generating alignment	394
18.1	Mass of banking populations in New York State, 1960–1990 . .	416
18.2	Predicted masses of financial institutions in New York State before deregulation, 1960–1980	417
18.3	Predicted masses of financial institutions in New York State after deregulation, 1981–1990	417
19.1	General structure of corporate-demographic effects on jobs . .	429

List of Tables

2.1	Counts of U.S. business organizations, 1970–1990	18
2.2	Size distribution of U.S. corporations, 1990	19
2.3	Estimates of average business size in the United States, 1960–1990	20
3.1	Starting events among automobile makers in four countries	43
3.2	Ending events among automobile makers in four countries	45
5.1	Design features of research published in the <i>Administrative Science Quarterly</i> , 1960–1995	87
5.2	Typical features of observation plans	94
5.3	Cross-sectional correlations between the coefficient of variation in tenure and turnover	96
5.4	Coefficient of variation in tenure over time for a team with demographic events	98
6.1	Narrative history of an organizational population with two forms	102
6.2	Illustrative data file for population members described in Table 6.1 and Figure 6.1	108
6.3	Estimates of constant-hazard models of mortality in the French automobile industry, 1885–1981	114
6.4	Estimates of multiple-origin, multiple-destination hazards of mortality in the French automobile industry, 1885–1981	117
6.5	Actuarial estimates of the life table for foundings of Tokyo banks, 1873–1926	122
6.6	Actuarial estimate of the life table for mortality of Tokyo banks, 1873–1945	123

7.1	Estimates of constant and piecewise-exponential models of duration dependence in the founding rates of banks in Tokyo	137
7.2	Quality of estimates of a mortality function	157
7.3	Quality of estimates of a mortality function under left truncation and size truncation	158
7.4	Quality of estimates of an organizational-structure function	161
9.1	Effects of environmental conditions on the number of telephone companies by type across states	196
10.1	Estimates of density dependence in vital rates for Singapore banks, 1840–1990	220
11.1	Hierarchical model contrasts involving the effects of density and industry age on entry rates in European automobile industries, 1886–1981	250
11.2	Estimates of the combined multilevel and population-age model for entry rates of automobile manufacturers in Belgium, Britain, France, Germany, and Italy, 1886–1981	257
13.1	Estimates of alternative specifications of age dependence in the mortality rates of banks in Tokyo	286
13.2	Notation for predicates, functions, and key parameters used in the logical formalizations in Chapters 13 and 14	297
14.1	Estimates of baseline proportional-hazard models of the effects of age and size on the rate of exit of automobile manufacturing firms	325
14.2	Estimates of nonproportional-hazard models of the effects of age and size on the rate of exit of automobile manufacturing firms	327
14.3	Implications of drift for the hazard of mortality for organizations lacking immunity with robust and fragile positions	335
15.1	Estimates of effects on the rate of entry into production in the U.S. automobile industry	351
15.2	Estimates of effects on the rate of entry into preproduction in the U.S. automobile industry	352
15.3	Estimates of effects on moving from preproduction into production in the U.S. automobile industry based on piecewise-exponential and log-logistic specifications	354

16.1 Overview of studies of effects of organizational change on mortality	369
16.2 Effects of innovation on the hazard of mortality for U.S. automobile producers	377
17.1 Experimental settings and outcomes of simulation experiments on historical efficiency	399
18.1 Estimates of organizational interdependence by interconnection law status	405
18.2 Estimates of organizational interdependence before, during, and after the Kingsbury agreement	409
18.3 Estimates of growth models of New York credit unions by regulatory period, 1914–1990	420
19.1 Estimates of jobs created and eliminated by corporate demography	428
