<i>Foreword</i>	v
<i>Preface</i>	vii
1 <i>Utility theory and insurance</i>	1
1.1 <i>Introduction</i>	1
1.2 <i>The expected utility model</i>	2
1.3 <i>Classes of utility functions</i>	7
1.4 <i>Optimality of stop-loss reinsurance</i>	10
1.5 <i>Exercises</i>	15
2 <i>The individual risk model</i>	19
2.1 <i>Introduction</i>	19
2.2 <i>Mixed distributions and risks</i>	20
2.3 <i>Convolution</i>	28
2.4 <i>Transformations</i>	31
2.5 <i>Approximations</i>	34

2.6	<i>Application: optimal reinsurance</i>	39
2.7	<i>Exercises</i>	40
3	<i>Collective risk models</i>	45
3.1	<i>Introduction</i>	45
3.2	<i>Compound distributions</i>	46
3.3	<i>Distributions for the number of claims</i>	50
3.4	<i>Compound Poisson distributions</i>	52
3.5	<i>Panjer's recursion</i>	54
3.6	<i>Approximations for compound distributions</i>	59
3.7	<i>Individual and collective risk model</i>	60
3.8	<i>Some parametric claim size distributions</i>	63
3.9	<i>Stop-loss insurance and approximations</i>	67
3.10	<i>Stop-loss premiums in case of unequal variances</i>	71
3.11	<i>Exercises</i>	75
4	<i>Ruin theory</i>	81
4.1	<i>Introduction</i>	81
4.2	<i>The risk process</i>	83
4.3	<i>Exponential upper bound</i>	85
4.4	<i>Ruin probability and exponential claims</i>	88
4.5	<i>Discrete time model</i>	91
4.6	<i>Reinsurance and ruin probabilities</i>	92
4.7	<i>Beekman's convolution formula</i>	95
4.8	<i>Explicit expressions for ruin probabilities</i>	100
4.9	<i>Approximation of ruin probabilities</i>	103
4.10	<i>Exercises</i>	106
5	<i>Premium principles</i>	111
5.1	<i>Introduction</i>	111
5.2	<i>Premium calculation from top-down</i>	112
5.3	<i>Various premium principles</i>	115
5.4	<i>Properties of premium principles</i>	117

5.5	<i>Characterizations of premium principles</i>	120
5.6	<i>Premium reduction by coinsurance</i>	123
5.7	<i>Exercises</i>	125
6	<i>Bonus-malus systems</i>	127
6.1	<i>Introduction</i>	127
6.2	<i>An example of a bonus-malus system</i>	128
6.3	<i>Markov analysis</i>	131
6.4	<i>Exercises</i>	137
7	<i>Credibility theory</i>	139
7.1	<i>Introduction</i>	139
7.2	<i>The balanced Bühlmann model</i>	141
7.3	<i>More general credibility models</i>	149
7.4	<i>The Bühlmann-Straub model</i>	153
7.5	<i>Negative binomial model for the number of car insurance claims</i>	160
7.6	<i>Exercises</i>	166
8	<i>Generalized linear models</i>	169
8.1	<i>Introduction</i>	169
8.2	<i>Generalized Linear Models</i>	171
8.3	<i>Some traditional estimation procedures and GLM's</i>	174
8.4	<i>Deviance and scaled deviance</i>	182
8.5	<i>Example: analysis of a contingency table</i>	186
8.6	<i>The stochastic component of GLM's</i>	190
8.7	<i>Exercises</i>	200
9	<i>IBNR techniques</i>	203
9.1	<i>Introduction</i>	203
9.2	<i>A GLM that encompasses various IBNR methods</i>	207
9.3	<i>Illustration of some IBNR methods</i>	213
9.4	<i>Exercises</i>	220

<i>10 Ordering of risks</i>	223
10.1 <i>Introduction</i>	223
10.2 <i>Larger risks</i>	226
10.3 <i>More dangerous risks</i>	229
10.4 <i>Applications</i>	236
10.5 <i>Incomplete information</i>	245
10.6 <i>Sums of dependent random variables</i>	252
10.7 <i>Exercises</i>	265
<i>Hints for the exercises</i>	273
<i>Notes and references</i>	289
<i>Tables</i>	299
<i>Index</i>	303
