Contents

1 Setting, Aim and Scope of the Study 1

2 Eastern German Transition and Government Policy 5
   2.1 The Challenges of the Transition Process 5
   2.2 The Framework of Policy Objectives in the Context of Transition and Structural Change 11
      2.2.1 Constitutional Framework 12
      2.2.2 Economic Foundation 13
      2.2.3 Social Objectives 15
      2.2.4 A Scheme of Policy Objectives: Guidelines, Targets and Instruments 16
   2.3 Policy Instruments 17
      2.3.1 The Extent of Government Interventions in Eastern Germany 17
      2.3.2 Subsidies to Eastern German Industries: A Core Element of Government Policy 21
   2.4 An Overview over Possible Effects of Investment Subsidies 34
      2.4.1 Theoretical Considerations 35
      2.4.2 Some Empirical Evidence on Capital, Employment and Productivity in Eastern German Industries 39
   2.5 Other Strategic Variables in the Transition Process 44
      2.5.1 Wages and the Labour Market 45
      2.5.2 Consumptive Transfers and Compensations 50
   2.6 Brief Summary of the Status Quo: A Tale of a Patient, a Therapy and Its Side Effects 57

3 Modelling the Impact of Investment Subsidies on Factor Demand and Production in the Eastern German Industrial Sector 59
   3.1 Preliminaries 59
      3.1.1 The Impact of Subsidies: Methodology of Analysis 59
      3.1.2 The Impact of Subsidies: Survey of Empirical Studies 62
3.2 The Theoretical Model
   3.2.1 Factor Demand and Substitution
   3.2.2 The Concept of the User Cost of Capital
   3.2.3 Modelling Output
   3.2.4 Summary: Substitution and Output Effects in a Cost Minimizing Model of Factor Demand

4 Empirical Implementation
   4.1 The Data
   4.2 The Basic Empirical Model
   4.3 Pooling the Data across Industries: The Merits and Drawbacks of Panel Estimation
      4.3.1 Panel Heterogeneity
      4.3.2 Unit Roots and Cointegration
      4.3.3 Dynamic Models and Small Sample Bias
      4.3.4 Summary: Estimation Method
   4.4 Estimation Results
      4.4.1 Effects of Investment Subsidies and Other Variables on Structural Change and Competitiveness
      4.4.2 Effects of Investment Subsidies and Wages on Investment and Employment
      4.4.3 Effects of Investment Subsidies on Productivity and Growth
   4.5 Looking beyond Factor Cost Relations: What the Model Reveals about Efficiency
   4.6 Summary and Critique of the Empirical Results

5 Concluding Remarks and Implications for Economic Policy
   5.1 Did Subsidization in Eastern German Transition Achieve Its Objectives?
   5.2 What Follows for Economic Policy after 2004?
      5.2.1 Subsidization: Reducing Distortions
      5.2.2 Infrastructure: Closing Gaps
      5.2.3 Labour Market: Differentiating Wages
   5.3 What Are the Perspectives?
Appendix 1  The Derivation of the First-Order Conditions in a Two-Stage CES Model of Factor Demand  165

Appendix 2  The Derivation of the Elasticities of Substitution in a Two-Stage CES Function  167

Appendix 3  Definitions of the Wage and Salary Categories of Blue-Collar Workers and White-Collar Employees  170

Appendix 4  Panel Cointegration Statistics  171

Appendix 5  Tables  173
