Preface: The collapse of Internet and technology stocks	xi
1 The age of information and the democratization of data	1
Technological change and the stock market in history	2
The defining moment for the Internet: 'The Protocol for Packet Network Intercommunication'	4
The democratization of data	5
2 The New Economy: where do Internet and technology stocks fit in?	7
The New Economy defined	7
A higher rate of productivity growth	7
A rise in total factor productivity growth	10
An increase in factor utilization	12
Globalization of the world economy	13
The New Economy and technology stocks	14
The ten essential principles for doing business in the New Economy	14
Postscript	17
Technological change and US economic statistics	17
Schumpeter: the pioneer of the analysis of technological change	19
Tofler's 'third wave'	20
The macro-economic consequences of the Internet economy.	22

3 Technology and the Internet economy: what made it all happen?	24
What is the Internet?	24
What is the Internet economy?	25
What is the World Wide Web?	27
The telephone network	28
The Internet and protocols	29
The defining features of the World Wide Web	30
What is an Internet stock?	30
Developments in information technology	31
Moore's law: the processing power of microchips	32
Gilder's law: developments in bandwidth	34
Metcalf's law: the impact of network externalities	35
Appendix 3.1 Technology milestones in the evolution of the Internet	36
4 Valuation techniques for traditional common stocks	42
Present value analysis: capitalization of income method	43
The required rate of return	45
The expected cash flows	45
The dividend discount model (DDM)	46
Fundamental analysis for valuing stocks	59
The price earnings (P/E) ratio	63
Price earnings growth factor (PEG)	66
Dividend yield	67
Bond yield/stock yield ratio	70
Tobin's q ratio	70
Price to book value (P/BV)	72
Price to sales ratio (P/SR)	72
Economic value added (EVA)	73
5 Applying the Porter model to the valuation of Internet and technology stocks	75
Internal analysis: strategic factors within the company	76
Human capital	76
The corporate culture	76
The uniqueness of product or service	77

External analysis: strategic factors for analysing the industry environment	77
The bargaining power of suppliers	78
The bargaining power of buyers	79
The threat of potential new entrants	79
The threat of substitutes	80
The extent of competitive rivalry	81
The Porter model, the Internet and the Web	82
The Porter model revisited	83
Technology stocks and branding	86
Financial analysis in the valuation of companies	90
6 Applying traditional valuation models to Internet and technology stocks: what are the problems?	95
Financial accounting and intangible assets	96
The world according to GAAP	97
Expensing versus capitalization of R&D expenditures	97
The role of intangible assets: if you cannot touch it what is it worth?	99
Types of intangible assets	100
Methods for valuing intangible assets	101
Methodology issues in technology stock valuations	102
Appendix 6.1 Key accounting issues in Internet and technology stock valuations	104
7 Bubbleology, stock markets and the Internet and technology stock price collapse	108
The Internet and technology stock price collapse	108
Bubbles in stock markets	109
Bubble terminology	110
The role of expectations in analysing stock market bubbles	111
Exogenous expectations	111
Extrapolative expectations	112
Rational expectations	112
Bubbles and the efficient market hypothesis (EMH)	113
Rational bubbles	115
Some famous bubbles in history	116
Tulipmania	117

The South Sea Bubble	118
The Wall Street Crash of 1929	121
Speculative bubbles theory	123
Rational speculative bubbles	123
The 'bubble premium'	125
Was the Internet and technology stock price crash a predictable bubble?	126
8 How should we value Internet and technology stocks?	
I: Key methodology	127
Key issues in valuation of technology stocks	127
Value drivers: where is the fundamental value in technology companies?	128
Valuation methods for technology stocks	128
Current priced multiple of sales revenue	130
Forward priced multiple valuation	131
Discounted cash flow (DCF)	132
The use of multiples as valuation techniques: arguments for and against	133
Web metrics	134
Reach	134
Stickiness	138
Customer loyalty	138
9 How should we value Internet and technology stocks?	
II: Ad hoc techniques and DCF revisited	139
Harmon's Internet toolbox	139
Market capitalization/total Internet users	141
Revenue market (market capitalization/revenue)	141
Lifetime value of an e-buyer	141
Market capitalization to industry potential market share	142
Angel's net stock valuation calculator	142
Net stock valuation calculator variables and methodology	142
Angel's valuation model	144
Discounted cash flow fights back!	145
Stage 1: start from the future	145
Stage 2: weighting for probability	146
Stage 3: customer value analysis	146
Conclusion	147

10 Derivatives markets, real options and the valuation of Internet and technology stocks	148
What are derivatives?	148
Some terminology	149
What are options?	150
Some terminology	150
Exchange-traded versus over-the-counter options	152
Who participates in the derivatives markets?	153
The role of the arbitrageur and the pricing of futures markets	155
Factors influencing the price of futures	156
Agreeing the futures price	157
What is basis?	159
What are forward market contracts?	160
What are futures contracts?	161
How are options priced?	163
The binomial model	163
Determining the value of call options	168
The Black–Scholes model	174
Real options and Internet and technology stock valuations	177
How does an investment project become an option?	177
Linking NPV and option value	178
Real option pricing methods	180
Types of real options	182
The link between real options and DCF	183
11 What are the lessons for investors from the year 2183 technology stocks collapse?	187
The laws of economics have not been repealed	188
Recent mistakes must be avoided	190
Schumpeter and creative destruction	190
Bibliography	192
Websites	198
Index	201
