INTRODUCTION

1	Towards a learning society <i>Pedro Conceição, Manuel V. Heitor and Bengt-Åke Lundvall</i>	3
---	---	---

PART ONE FOSTERING INNOVATION

	Introductory note: Novelty, knowledge and learning <i>João Caraça</i>	19
2	Interactions between policy learning and innovation theory <i>Lynn K. Mytelka and Keith Smith</i>	24
3	Manna trajectories and networks: shifting heuristics in the economics of innovation and new technologies <i>Cristiano Antonelli</i>	45
4	Policy integration and action diversification: learning from the Portuguese path <i>Pedro Conceição and Manuel V. Heitor</i>	61

PART TWO PROMOTING ORGANISATIONAL LEARNING

	Introductory note: Innovation and organisational change <i>Edward Lorenz</i>	97
5	Understanding technological and organisational change <i>James Wickham</i>	101

6	The flexible firm: new concepts and differences between the Nordic systems of innovation <i>Allan Næs Gjerding</i>	122
7	Broadening the analysis of innovation systems – competition, organisational change and employment dynamics in the Danish system <i>Bengt-Åke Lundvall and Jesper Lindgaard Christensen</i>	144
PART THREE BUILDING COMPETENCES		
	Introductory note: Innovation and competence building <i>Manuel V. Heitor</i>	183
8	On knowledge and learning for the new millennium <i>Roberto Carneiro</i>	186
9	Low skills – a social problem for Europe <i>Hilary Steedman</i>	206
10	Competence building in life-wide learning <i>Hannele Niemi</i>	219
11	Trade unions in Western Europe: an overview and prospects for social inclusion and competence building <i>Alison Booth</i>	240
PART FOUR STRIVING FOR SOCIAL COHESION		
	Introductory note: Innovation and social cohesion <i>Pedro Conceição</i>	261
12	Unemployment, work and welfare <i>Duncan Gallie</i>	266
13	Locally-based actions to counteract social exclusion: what we may learn from TSER research <i>Chiara Saraceno</i>	284
14	Globalisation, social inequality and the role of country-specific institutions <i>Hans-Peter Blossfeld</i>	303
	<i>Name index</i>	325
	<i>Subject index</i>	331

Figures

4.1	Average literacy survey results	65
4.2	Labour force participation of the population segment with the lowest level of literacy	65
4.3	Literacy scores of people aged 20–25 years and with upper secondary education	66
4.4	Intensity and scale of R&D expenditure in the OECD	67
4.5	Number of PhD students in units for each scientific area in 1996 and 1999	69
4.6	Classification of research units in each scientific area in the 1999 evaluation	72
4.7	Innovative performance of EU countries	81
4.8	Sources of information for innovation	81
4.9	Factors hampering innovation	82
4.10	Degree of consensus across Europe on the hampering factors	82
4.11	Innovation rates (% of innovative firms) in the Portuguese manufacturing sector	83
4.12	Government, business and higher education sectors in R&D funding	89
6.1	Different components of flexibility	126
6.2.	The Danish flexibility score, percentage distribution	127
6.3	Three types of flexibility in the Danish private business sector	128
6.4	Stepwise application of the front runner criteria, % share of firms	131
6.5	Different types of flexible organisational behaviour	134
6.6	Three main approaches to the analysis of flexibility	134
6.7	Three types of flexibility	136
6.8	Four types of flexibility – Figure 6.7 revisited	137
7.1	The basic model – from macro to micro and back to macro	151
7.2	Technical and organisational change in firms that reported increased or unchanged competitive pressure during the years 1993–95	158

7.3	Relationships between competition innovation and functional flexibility	166
7.4	Share of firms that answered 'greater' to the question 'Has the firm altered its demands for qualifications in connection with hiring 1993–95?' by change in competitive pressure	170
8.1	Towards the learning society – a comprehensive model considering the intersection of three key variables: paradigm shift, delivery modes, driving forces	197
8.2	Knowledge challenges for teachers in a learning society	203
10.1	Life-wide learning consists of the vertical and horizontal dimensions of learning	221
11.1	Unionisation EU–US	242

Tables

4.1	Regression results on the characteristics of innovative firms: first model	85
4.2	Regression results on the characteristics of innovative firms: second model	86
5.1	Websites for TSER research projects discussed in this chapter	119
7.1	Proportion of firms responding 'high extent' to the following question: 'To what degree have the following conditions contributed to changes in work content of the employees during the period 1993–95?'	155
7.2	Share (%) of firms responding 'much stronger competition in the period 1993–95', by size categories and sectors	157
7.3	Share (%) of firms which introduced organisational change at least once in the period 1993–95, by size categories and sectors	159
7.4	Proportion of firms responding 'yes' to the following question: 'Has the firm extended its use of the following organisational traits during the period 1993–95?'	160
7.5	The development in employment 1992–97 for three groups of firms arranged according to change in competitive pressure (index of the number of employees, 1992 = 100)	162
7.6	Comparing employment development 1992–97 in firms that are more or less functionally flexible and more or less exposed to stronger competition	163
7.7	Comparing employment development 1992–97 in firms that are more or less active in terms of technological innovation and in creating new markets (and more or less exposed to stronger competition)	164
7.8	Employment 1992–97 in firms with and without product and service innovations 1993–95 (index 1992 = 100)	167
7.9	Proportion of firms responding 'more' to the following question: 'Has the content of work changed for the	

	employees during the period 1993-95 with more emphasis on (factor)?'	168
7.10	Employment of workers without vocational training and all workers 1992-97 in groups of firms experiencing varying degrees of increased competition during the period 1993-95	171
7.11	Employment of workers without vocational training in dynamic and static firms 1992-97	173
8.1	Characteristics of adaptive and generative learning	192
8.2	The way to inclusive knowledge	195
9.1	Employment/population ratios by educational attainment for persons aged 25-64, 1994 (percentages)	211
11.1	Union density rates, 1950-1997	243
11.2	Features of OECD labour markets, 1989-1994	246
11.3	Union density and coverage in Europe (%)	246
12.1	Comparison of employment commitment of the employed and unemployed	270
12.2	Poverty ratios of unemployed persons in the EPUSE countries in the mid-80s and the mid-90s	274
