<i>List of figures</i>	vii
<i>List of tables</i>	ix
<i>Preface</i>	xiii
1. Introduction to Market Structure, Competition and Efficiency	1
2. Intermediation, Integration and Internationalization	19
3. Measures of Competition and Concentration in the Banking Industry	47
4. Competition and Concentration in the Banking Industry and their Relationship	83
5. Competition on EU Deposit and Loan Markets	145
6. Efficiency and Cost Differences across Countries	193
7. Cyclical Patterns in Profits, Provisioning and Lending of Banks	241
8. Structural Changes in the EU Banking Industry and Policy Recommendations	275
<i>References</i>	289
<i>Name index</i>	303
<i>Subject index</i>	307

# Figures

---

1.1	Correlations between structure, conduct and performance	15
1.2	Relationships between structure, conduct, performance and efficiency	16
2.1	Distribution of financial assets between intermediated and non-intermediated instruments in the euro area	21
2.2	Value of mergers and acquisitions involving banks in the euro area	30
2.3	Total value of bank mergers and acquisitions classified by acquiring or largest firm's region	33
2.4	Relationship between number of banks and returns on equity	40
3.1	The Hannah and Kay index (for different values of $\alpha$ )	60
3.2	The $U$ index (for different values of $a$ )	61
3.3	The multiplicatively-modified Hause index (for different values of $\alpha$ )	61
3.A.1	Concentration curve of mortgages in the Dutch banking industry	78
3.A.2	Concentration curve of total assets in the Dutch banking industry	79
3.A.3	Lorenz curve for the Dutch banking sector	80

6.1	Relationships between X-inefficiency and cost levels estimated by dummies	208
6.2	Relationships between the rankings of X-inefficiency and cost levels	216

# Tables

---

1.1	Country-specific ratios and indices related to efficiency and competition	10
1.2	Comparison of two estimates of inefficiency	12
1.3	Correlations between simple ratios and more sophisticated efficiency and competition estimates	13
2.1	Capital and bank markets indicators	22
2.2	Funds raised in the capital market by non-financial enterprises	23
2.3	Liabilities of non-financial enterprises	24
2.4	International debt securities: outstanding amounts as per cent of total debt securities	25
2.5	Share of foreign banks (as a per cent of total assets of domestic banks)	27
2.6	External positions of banks in individual countries (as a per cent of gdp)	29
2.7	Concentration indices ( $CR_5$ ) based on total assets, lending and deposits	32
2.8	Numbers of inhabitants per bank branch and per bank employee	35
2.9	Net interest rate margins	36
2.10	Share of net interest revenue for various bank-size classes	37

2.11	Operating expenses as per cent of gross income	38
2.12	Profit before tax and returns on assets and equity	39
2.A.1–3	Twenty largest banks in terms of shareholder equity in 2001, 1996 and 1991	43
3.1	Application of concentration measures to the Dutch mortgage market	59
3.2	Concentration indices for 20 countries, based on total assets	62
3.3	The structure–performance relationship in banking	67
3.4	Concentration measures and their conjectural variations	70
3.5	P–R model results in other studies	76
4.1	Discriminatory power of $H$	87
4.2	Sample period and number of observations per country	91
4.3	Empirical results of the reduced-form revenue model for the EU	93
4.4	Empirical results for $H$ for various bank-size samples and various years	97
4.5	Empirical results for the Netherlands for interest revenue and total revenue	100
4.6	Concentration indices for 23 countries, based on total assets	103
4.7	Market shares of the ten largest banks in the sample	104
4.8	Relationship between competition and concentration for the all-bank sample with a Europe dummy	106
4.9	Relationship between competition and concentration for the all-bank sample with ‘share of bank deposits’	107
4.B.1–23	Empirical results for 23 countries	112

4.C.1	Number of banks and observations per country in EU analysis	127
4.C.2	Empirical results for $H$ for various bank-sizes: averages over 1991 and 1997	128
4.D.1–23	Descriptive statistics of the data for 23 countries	130
5.1	Expected coefficient signs of the determinants of the various models	154
5.2	Market power and summary of the estimates of the deposit rate model	158
5.3	Market power and summary of the estimates of the lending rate model	162
5.A.1	Empirical results for the real deposits equation	166
5.A.2	Empirical results for the deposit rate equation	170
5.B.1	Empirical results for the real loans equation	173
5.B.2	Empirical results for the lending rate equation	177
5.C.1–9	Data sources for nine countries	180
5.C.10	Descriptive statistics of the data of the Bresnahan models over 1983–97	189
6.1	Specifications of the SCF and TCF models	202
6.2	European-wide estimates of X-efficiency using the SCF model	204
6.3	Europe-wide estimates of cost effects using a translog cost model	207
6.4	Distribution of banks over size and categories classes	209
6.5	Mean X-efficiency by country and by bank-size class	210
6.6	Mean X-efficiency by country and by bank categories	214
6.7	Changes in efficiency and cost level differences over time	218

6.8	Europe-wide estimates of X-efficiency for two sub-periods	219
6.A.1	Country-specific characteristics of selected European banks	224
6.B.1	Europe-wide and single country estimates of efficiency	228
6.C.1	Sensitivity analysis for the number of German banks or observations: efficiencies and ranks for various samples	231
6.C.2	Cost effects in a translog cost model by country and by bank-size class	233
6.C.3	Average cost level by country and by bank category	235
6.C.4	Estimates of cost effects in a translog cost model for two sub-periods	238
7.1	Breakdown of banks' profits	246
7.2	Explanation of profit margin on assets before tax in 26 countries	252
7.3	Explanation of credit loss provisioning for 21 countries	258
7.4	Explanation of lending for 26 countries	262
7.A.1	Data sources used	266
7.A.2	Descriptive statistics of the data of the profit margin on assets model for 26 countries	268
7.A.3	Descriptive statistics of the data of the credit loss provisioning model for 21 countries	270
7.A.4	Descriptive statistics of the data of the lending model for 26 countries	271
