Table of contents

Executive summary ................................................................. 11

Introduction ................................................................. 19

Chapter 1. Better health through better care: the quest for quality .......... 21
  Dramatic improvements in population health status ...................... 22
  Variation in health outcomes across countries .......................... 25
  Significant shortcomings in health-care quality ......................... 27
  Tools and strategies for health-care quality improvement .............. 29
  Increasing information on cross-country differences in health-care quality ... 35
  Approaches for improving health and health-care quality: summary of findings . 37
  Notes .................................................................................. 37

Chapter 2. Access to care: the quest to improve and maintain .......... 39
  Public coverage or private insurance is important to promote access to care and financial protection .................. 40
  Some barriers to access persist ............................................. 50
  Ensuring an adequate supply of health-care providers ................ 54
  Assuring the availability of an appropriate mix of long-term care services ......................................................... 60
  Access to new health-related technologies ................................ 63
  Approaches for assuring adequate and equitable access: summary of findings ......................................................... 65
  Notes .................................................................................. 66

Chapter 3. Satisfied patients and consumers: the quest for greater responsiveness . 69
  Policies to address excessive waiting times for elective surgery ........ 70
  Long-term care that better meets the preferences and expectations of patients and caregivers ........................................ 72
  Health insurance options can increase the responsiveness of health systems ......................................................... 73
  Approaches for increasing system responsiveness: summary of findings ................................................................. 74
  Notes .................................................................................. 75

Chapter 4. Health-care spending: the quest for affordable costs and sustainable financing .... 77
  Rising costs and their impact .................................................. 78
  The experience with health-care cost containment ....................... 81
  Sustainable financing for health and long-term care .................... 88
Chapter 5. Increasing value for money in health systems: the quest for efficiency

Evidence of inefficiency in health systems ................................................. 96
Cost-effectiveness of investment in disease prevention and health promotion .... 97
Demand-side initiatives to increase efficiency .......................................... 98
Supply-side initiatives to increase efficiency ............................................. 99
Efficient deployment of human resources for health care ......................... 99
Improving efficiency in the hospital sector .............................................. 102
Improving efficiency in delivery of long-term care .................................. 104
Promoting efficient use of health technology ........................................... 105
The role of private health insurance in efficiency improvements ............... 110
Approaches for increasing efficiency: summary of findings ................. 113

Notes ........................................................................................................... 115

Conclusions from the OECD Health Project: promising approaches for improving health-system performance ......................................................... 117

Bibliography ............................................................................................. 123

List of boxes

1.1. Obesity: a public health threat ............................................................. 25
1.2. Does waiting for elective surgery result in worse health outcomes? .... 26
1.3. Improving health-care quality: policy options ................................. 30
1.4. Quality oversight mechanisms: examples from OECD countries ....... 31
1.5. The drive to improve quality of long-term care services ................. 32
1.6. Information and communications technology applications in health care 34
1.7. Challenges and value of making cross-country comparisons of quality 36
2.1. Increasing access to health care: recent initiatives in OECD countries .... 44
2.2. Policies to foster availability and affordability of private health insurance 46
2.3. The UK experience with policies stimulating immigration of physicians 58
2.4. Cross-country differences in the rate of adoption and diffusion of health technologies ................................................................. 64
2.5. Decision-making challenges posed by tomorrow’s technologies ....... 66
3.1. Why are there excessive waiting times for elective surgery in some OECD countries? .......................................................... 71
4.1. Effect of cost-sharing on health cost containment in Korea ............... 84
4.2. Are waiting times indicative of shortfalls in public spending on health care? 87
4.3. Social long-term care insurance for ageing societies: recent experience in Germany and Japan .................................................. 90
4.4. Private long-term care insurance: experience and challenges ........... 91
5.1. Recent efficiency improvements by the US Veterans Health Administration 99
5.2. Use of health technology assessment in decision-making in three OECD health systems ......................................................... 108
5.3. Experience with increasing competition among insurers in OECD countries. . . . 112
Promising directions for health policy .................................................. 119

List of figures

1.3. One-year case fatality rates for ischaemic stroke, 1998 ......................... 26
2.1. Equity of access to physician care, 2000. ....................................... 51
2.2. Practising physicians per 1 000 population, 2000 ........................... 55
2.3. Increase in number of practising physicians per 1 000 population, 1980-2000 . . 55
2.4. Physician density and waiting times for elective surgery, 2000 ............... 56
2.5. Recently graduated physicians as a percentage of practising physicians, 2000. . . 57
2.6. Long-term care service use among the elderly in selected OECD countries, 2000. . . 61
4.1. Health expenditure as a percentage of GDP, 2001 ............................ 78
4.2. Change in total health expenditure as a percentage of GDP, 1990-2001 ......... 78
4.3. Share of the population aged 80 and over, 2000 .............................. 79
4.4. Public expenditure on long-term care as a share of GDP
    in selected OECD countries, 2000 ............................................ 80
4.5. Per capita expenditure on health, 2001 ......................................... 81
4.6. Long-term care expenditure by source of financing
    in selected OECD countries, 2000 ............................................ 81
4.7. Health expenditure and GDP per capita, 2001 ............................... 87
5.1. Ischaemic heart disease, total population, age standardised mortality rate, 2000 . . 97
5.2. Coronary re-vascularisation procedures per 100 000 population, 2000 .......... 97
5.3. Doctor consultations per capita, 2000 ........................................... 100
5.4. Change in number of doctor consultations per capita, 1990 to 2000 .......... 100

List of tables

2.1. Coverage by public schemes and private health insurance in OECD countries, 2000 41
2.2. Cost-sharing policies in public schemes for basic health coverage ............... 47
2.3. Main source of public funding for long-term care services
    in selected OECD countries, 2003 ............................................. 50
